2.0 Introduction

During October 4 – 13, 2017, the 9600 Pendant, model 0800-0590, as provided from RF Technologies was tested to the requirements of CFR 47 Part 15 Subpart C Section 15.247. To meet these requirements, the procedures contained within this report were performed by personnel of D.L.S Electronic Systems, Inc.

3.0 Test Facilities

D.L.S. Electronic Systems, Inc. is a full service EMC/Safety Testing Laboratory accredited to ISO 17025. NVLAP Certificate and Scope can be viewed at <http://www.dlsemc.com/certificate>. Our facilities are registered with the FCC, Innovation Science and Economic Development Canada, and VCCI.

6.0 Test Arrangements

Radiated Emissions Measurement Arrangement:

All radiated emission measurements were performed at D.L.S. Electronic Systems, Inc. and set up according to ANSI C63.10-2013, unless otherwise noted. Description of procedures and measurements can be found in Appendix B – Measurement Data. See Appendix A for additional photos of the test set up. See Appendix C for measurement uncertainty.

Unless otherwise noted, the bandwidth of the measuring receiver / analyzer used during testing is shown below.

8.0 Modifications Made To EUT For Compliance

None.

9.0 Additional Descriptions

The EUT was programmed for continuous transmission on Low, Mid, and High channels, with a 100% duty cycle.

For radiated emissions, the EUT with was rotated through 3 orthogonal axis to find worst-case.

A duty cycle reduction factor as expressed in FCC Section 15.35(c) was used in determining the unwanted emission levels radiated in the restricted bands as allowed per FCC KDB 558074 D01 DTS Meas Guidance v04. This worst-case duty cycle reduction factor was measured to be 38.95 dB. See next page for manufacturer's attestation regarding the duty cycle as it relates to the KDB allowance for reduction of levels based on maximum duty cycle.

October 3, 2017

To Whom It May Concern:

RF Technologies attests to the following for the QR Premiere Call Pendant 0800-0590:

The duty cycle reduction factor expressed in 15.35 (c) can be utilized for unwanted emissions (including spurious emissions) since the following conditions are satisfied:

- 1) the unwanted emission is temporally related to the fundamental emission (i.e. an intermodulation or harmonic product)**
- 2) the unwanted emission falls into a restricted frequency band**
- 3) the maximum duty cycle used in determining the reduction factor is "hardwired" such that under no condition can it be changed or modified by either the device or the end user.**

10.0 FCC 15.31 (e) Supply Voltage Requirement statement

FCC 15.31 (e) - For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage.

Compliance Statement: This device complies with the requirements of Part 15.31(e):

- ☒ This device is battery operated. All tests were performed using a new (or fully charged) battery.
- ☐ This device provides a constant regulated voltage to the RF circuitry regardless of supply voltage (see schematic diagrams).
- ☐ This device does not provide a constant regulated voltage to the RF circuitry regardless of supply voltage. Data has been supplied in this test report that supports compliance. Details:

11.0 FCC 15.23 Antenna Requirement statement

SECTION 15.203 ANTENNA REQUIREMENT

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.... This requirement does not apply to carrier current devices or to devices operated under the provisions of Sections 15.211, 15.213, 15.217, 15.219, or 15.221.

Statement: This wireless device (Intentional Radiator) meets the requirements of FCC Part 15.203:

- ☒ The antenna is permanently attached
- ☐ The antenna has a unique coupling to the intentional radiator.
Description of coupling:
- ☐ This intentional radiator is professionally installed
- ☐ This intentional radiator, in accordance with Section 15.31(d), must be measured at the installation site.

12.0 Results

Measurements were performed in accordance with CFR 47 Part 15 Subpart C Section 15.247 and ANSI C63.10-2013. Graphical and tabular data can be found in Appendix B at the end of this report.

13.0 Conclusion

The RF Technologies 9600 Pendant, model 0800-0590, tested during October 4 – 13, 2017 **meets** the requirements of CFR 47 Part 15 Subpart C Section 15.247.

Rule Part: FCC Part 15.247(b)(3)

Test Procedure: ANSI C63.10-2013, sections 11.9.1 & 11.9.1.1

Limit: 1 Watt (30 dBm)

Results: Compliant
Maximum peak conducted output power = 6.30 dBm

Notes: This was an RF conducted measurement. The EUT was connected to the measuring equipment through a temporary external antenna connector. Cable loss was accounted for in the transducer factors set in the analyzer. The EUT was set to transmit continuously (100% Duty Cycle) at its maximum power level at the low, middle and high channels of the operating band. Peak Output power was measured with a spectrum analyzer.

B8.0 Emissions in Restricted Frequency Bands – Radiated

Rule Part: FCC Part 15.247(d), 15.205(a), 15.209(a)

Test Procedure: ANSI C63.10-2013, sections 11.12 & 11.12.1

Limit: FCC 15.209

Results: Compliant

Notes: The EUT was set to transmit at its maximum power with 100% duty cycle at the low, middle and high channels of the operating band. Peak measurements were taken with RBW = 1 MHz, VBW = 3 MHz. Average measurements were taken with RBW = 1 MHz, VBW = 3MHz. A voltage duty cycle reduction factor of 38.95 dB was subtracted from the Average measurements. (Production units have a fixed duty cycle of 1.13%)

No emissions were found from 30 – 1000 MHz or 18 – 26 GHz.

Radiated Emissions in Restricted Bands – 30 MHz to 26 GHz

Tested at a 3 Meter Distance 30 MHz to 18 GHz

Tested at a 1 Meter Distance 18 GHz to 26 GHz

Appendix C – Measurement Uncertainty

Compliance with the limits in this standard are based on the results of the compliance measurement. Our calculated measurement uncertainty including the measurement instrumentation, associated connections between the various instruments in the measurement chain, and other contributions, are provided in this section of the test report.

Parameter	Expanded Uncertainty (K=2)
Occupied Channel Bandwidth	+/-1.14%
RF Output Power, Conducted	+/-0.89dB
Unwanted Emissions, Conducted	+/-2.62dB
All Emissions, Radiated	+/-4.95dB
DC and Low Frequency Voltages	+/-2.42%
Duty Cycle	+/-0.05%
