13.5 Transient frequency behavior

13.5.1 Transient frequency behavior 6.25 kHz bandwidth channels

Measurement:

The first plot shows the measurement of the carrier signal to show that a clean carrier is transmitted which results in a measured bandwidth of nearly twice the used RBW.

The following plots show triggered measurements in the time domain with a RBW of 3 kHz (3-dB filter).

A decrease of this power level of 3 dB can be correlated to a frequency error of a half RBW (1.5 kHz).

Therefore the frequency error is less than ± 1.5 kHz as long as the power level is in the 3 dB range. This criteria was taken as worst case condition to show compliance.

Limits:

FCC		IC	
FCC 47 CFR § 90.214		RSS 119 Issue 12 5.9	
Transient frequency behavior			
Time intervals	Maximum frequency difference	Frequency range	
		150 – 174 MHz	421 - 512 MHz
Transient Frequency Behavior for Equipment Designed to Operate on 25 kHz Channels			
t ₁	±25.0 kHz	5 ms	10 ms
t ₂	±12.5 kHz	20 ms	25 ms
t ₃	±25.0 kHz	5 ms	10 ms
Transient Frequency Behavior for Equipment Designed to Operate on 12.5 kHz Channels			
t ₁	±12.5 kHz	5 ms	10 ms
t ₂	±6.25 kHz	20 ms	25 ms
t ₃	±12.5 kHz	5 ms	10 ms
Transient Frequency Behavior for Equipment Designed to Operate on 6.25 kHz Channels			
t ₁	±6.25 kHz	5 ms	10 ms
t ₂	±3.125 kHz	20 ms	25 ms
t ₃	±6.25 kHz	5 ms	10 ms

t_1 is the time period immediately following ton.

t_2 is the time period immediately following t_1 .

t_3 is the time period from the instant when the transmitter is turned off until t_{off} .

Test scenario	lowest channel	middle channel	highest channel
The frequency stabilizes within the required frequency tolerance range after switching on the transmitter during period t_1 after:	3.73 ms	3.78 ms	3.73 ms
Maximum power deviation during t_2 : (power deviation below 3 dB conforms a frequency deviation below ± 1.5 kHz)	1.87 dB	1.52 dB	1.94 dB
Switch off time (t_3):	1.12 ms	1.04 ms	1.14 ms

Result:

Confirm that during periods t_1 and t_3 the frequency difference does not exceed the value of one channel separation	Passed
Confirm that during period t_2 the frequency difference does not exceed half a channel separation	Passed
Confirm that during periods t_2 to t_3 the frequency difference does not exceed the frequency error limit	Passed

13.5.2 Transient frequency behavior 25 kHz bandwidth channels

Measurement:

The first plot shows the measurement of the carrier signal to show that a clean carrier is transmitted which results in a measured bandwidth of nearly twice the used RBW.

The following plots show triggered measurements in the time domain with a RBW of 10 kHz (3-dB filter).

A decrease of this power level of 3 dB can be correlated to a frequency error of a half RBW (5 kHz).

Therefore the frequency error is less than ± 5 kHz as long as the power level is in the 3 dB range. This criteria was taken as worst case condition to show compliance.

Emission Mask C On any frequency removed from the center of the authorized bandwidth by more than 250 percent of the authorized bandwidth: $43 + 10\log_{10}(P)$ dB	
Emission Mask D 12.5 kHz channel spacing 70 dB or $50 \text{ m} + 10\log_{10}(P_{\text{Watts}})$ – whichever is the lesser	
Emission Mask E 7.5 kHz channel spacing $57 \text{ or } 55 \text{ m} + 10\log_{10}(P_{\text{Watts}})$ – whichever is the lesser	

Emission Masks B, C, G, I and J

Unwanted emission measurements can be in peak or averaging mode, provided that the same parameter, peak power or average power, used for the transmitter's output power measurement is also used for the unwanted emission measurements.

Except where otherwise stated, on any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth, a resolution bandwidth of at least 100 kHz must be used for frequencies to be measured at or below 1 GHz, and a resolution bandwidth of at least 1 MHz must be used for frequencies to be measured above 1 GHz. If a narrower resolution bandwidth is used, power integration shall be applied.

Emission Masks D, E, F and Y

In order to show compliance with the emission mask up to and including 50 kHz removed from the edge of the authorized bandwidth, adjust the resolution bandwidth to 100 Hz with the measuring instrument in a peak mode. For emissions beyond 50 kHz from the edge of the authorized bandwidth, the resolution bandwidth shall be 100 kHz for frequencies at or below 1 GHz, and 1 MHz for frequencies above 1 GHz.

13.9 Spurious emissions radiated < 30 MHz

Description:

Measurement of the radiated spurious emissions in transmit mode below 30 MHz. The EUT is set to channel 6. This measurement is representative for all channels and modes. If peaks are found channel 1 and channel 11 will be measured too. The measurement is performed with the data rate producing the highest output power. The limits are recalculated to a measurement distance of 3 m with 40 dB/decade according CFR Part 2.

Measurement:

Measurement parameter

13.11 Spurious emissions AC conducted < 30 MHz

Description:

Measurement of the conducted spurious emissions in transmit mode below 30 MHz. The measurement is performed with the data rate producing the highest output power. Both power lines, phase and neutral line, are measured. Found peaks are remeasured with average and quasi peak detection to show compliance to the limits.

Measurement:

Measurement parameter	
Detector:	Peak - Quasi Peak / Average
Sweep time:	Auto
Video bandwidth:	F < 150 kHz: 200 Hz F > 150 kHz: 9 kHz
Resolution bandwidth:	F < 150 kHz: 1 kHz F > 150 kHz: 100 kHz
Span:	9 kHz to 30 MHz
Trace-Mode:	Max Hold

Limits:

FCC		IC
TX Spurious Emissions Conducted < 30 MHz		
Frequency (MHz)	Quasi-Peak (dB μ V/m)	Average (dB μ V/m)
0.15 – 0.5	66 to 56*	56 to 46*
0.5 – 5	56	46
5 – 30.0	60	50

*Decreases with the logarithm of the frequency

Results: see table below plots

14 Glossary

AVG	Average
C	Compliant
C/N₀	Carrier to noise-density ratio, expressed in dB-Hz
CAC	Channel availability check
CW	Clean wave
DC	Duty cycle
DFS	Dynamic frequency selection
DSSS	Dynamic sequence spread spectrum
DUT	Device under test
EN	European Standard
ETSI	European Telecommunications Standards Institute
EMC	Electromagnetic Compatibility
EUT	Equipment under test
FCC	Federal Communications Commission
FCC ID	Company Identifier at FCC
FHSS	Frequency hopping spread spectrum
FVIN	Firmware version identification number
GNSS	Global Navigation Satellite System
GUE	GNSS User Equipment
HMN	Host marketing name
HVIN	Hardware version identification number
HW	Hardware
IC	Industry Canada
Inv. No.	Inventory number
MC	Modulated carrier
NA	Not applicable
NC	Not compliant
NOP	Non occupancy period
NP	Not performed
OBW	Occupied bandwidth
OC	Operating channel
OCW	Operating channel bandwidth
OFDM	Orthogonal frequency division multiplexing
OOB	Out of band
OP	Occupancy period
PER	Packet error rate
PMN	Product marketing name
PP	Positive peak
QP	Quasi peak
RLAN	Radio local area network
S/N or SN	Serial number
SW	Software
UUT	Unit under test
WLAN	Wireless local area network
