1.5 Test item

Type of equipment : **HomeRF -Voice phone, mobile part**
Type designation : **GIGASET 4820/4840**
Manufacturer : applicant
Street :
City :
Country :
Software : 10_29

Additional informations: :

Frequency : 2400 – 2483.5 MHz (2403 – 2477 MHz)
Type of modulation : 800KFXD / 75M0FXD (FHSS) TDMA
Number of channels : 75
Antenna : integral antenna
Power supply : 3V Accumulator
Output power radiated : max 199.6 mW EIRP
Type of equipment :

1.6 Test standards: FCC Part 15 §15.247

2 Technical test**2.1 Summary of test results**

The tested GIGASET samples have the same RF part. We tested the 4820 completely.

The difference between 4820 and 4840 is in the software and the keypad. Measured differences are only in radiated and conducted power, but within 1dB.

The radiated measurements were performed vertical, horizontal results were more then 7 dB lower over the whole frequency range. This is done automatically by our testing system.

We start at 1 m high with vertical receiving antenna and rotate the dish continuously. During rotation we use the antenna lift system to vary the high from 1 to 4 m. So we find maximum radiation output. At this points we do manual remeasurements. After this we do the same measurements in horizontal position of the receiving antenna. This (horizontal and vertical) is made for all the three planes of the test sample. We use the maximum received results.

The antenna gain measurement was performed by the difference between conducted and radiated output measurement.

All measurement settings are according to FCC 15.35, 15.205, 15.209, 15.247 and the „Measurement guidelines for FHSS systems“.

Measurements below 1 GHz were performed with a CISPR Quasi Peak Adapter, over 1 GHz we used peak measurements. At peaks we did an second, average measurement.

ResBW and VBW were according FCC requirements.

No deviations from the technical specification(s) were ascertained in the course of the tests performed.

Time of occupancy (dwell time)

§15.247(a)

The max. duration of signal is 0.565 ms. The worst case (shortest) period for repetition of signals on one channel is two times 0.565 ms during 10 ms. This period equates to approximately 80 pulses within 30 seconds in each channel.

Based on this rate and a signal duration of 1.13 ms, the longest duration would be $80 * 1.13 \text{ ms} = 90.4 \text{ ms}$. Based on this criteria, the SIEMENS GIGASET 4820/4840 meets the average time of occupancy requirements of FCC15.247 ($< 0.4 \text{ s}$).

§ 15.247 (c) (1)

Date: 8.NOV.2001 08:07:08

This is only a scan. Final measurements were made below 1 GHz with 100 kHz RBW/VBW and a CISPR Quasi peak adapter , higher frequencies with 1 MHz RBW/VBW

The peaks in restricted bands are remeasured radiated. You can find the plots later in the report.

REFERENCE NUMBER(S) OF TEST EQUIPMENT USED
(for reference numbers see test equipment listing)
17-24

SPURIOUS RADIATED EMISSION

§ 15.247 (c) (1)

The measurements below 1 GHz were performed with an CISPR Quasi Peak Adapter.
In the scans above 4 GHz you see no peaks. We did manual measuremets on the harmonics.

EMISSION LIMITATIONS					
f (MHz)	polarization	amplitude of emission (dBμV/m) QP/Peak	amplitude of emission (dBμV/m) average	limit max. allowed emmission power (dBμV/m)	results
2403 MHz					
2640	vertical		27.9	54.0	complies
2440 MHz					
2614	vertical		27.2	54.0	complies
2477 MHz					
2601	vertical		27.6	54.0	complies
Measurement uncertainty		± 3dB			

Horizontal measurements were more then 5 dB lower

LIMITS

SUBCLAUSE § 15.247 (c)

In any 100 kHz bandwidth outside the frequency band at least 20dB below the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).
