Attestation Statement regarding non-use of 20 Mhz bandwidths

FCC ID: LDKXSCLCR14

The above device does not allow the use of 20 mhz bandwidths. The software used to test it was capable of being set to 20 mhz bandwidths so it was tested in those modes, however, for business reasons the device is limited to using only 5 mhz and 10 mhz bandwidths.

The Wireless Guide document correctly shows the use of only 5 and 10 mhz.

A handwritten signature in cursive script, reading "Fred Leffingwell".

Fred Leffingwell
Senior EMC Engineer, Cisco Systems, Inc.
