1. Antenna System Description

There are two cabled antennas (LB1_C and HB4_C) and five onboard antennas (LB2, LB3, HB1, HB2, HB3).

- 02102073-07333A1 (LB1_C): 5GHz Band WiFi Balanced PCB antenna that operates in 5150-5830 MHz Band. It provides high efficient radiation with good cost benefits. It is cable fed and can be heat-staked on the customer enclosure. The antenna has a coax cable that is terminated with U.FL-style connector.
- 02036073-7333B1 (LB2): 2.5 GHz Band WiFi Onboard antenna that operates in 2400-2500 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted on a PCB with corresponding footprint and a 50 ohms transmission line. A Pi matching network should be placed between the radio and antenna feed pad.
- 02036073-05853 (LB3): 2.5 GHz Band WiFi Onboard antenna that operates in 2400-2500 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted on a PCB with corresponding footprint and a 50 ohms transmission line. A Pi matching network should be placed between the radio and antenna feed pad.
- 02036142-05853 (HB1): 5GHz Band WiFi Onboard antenna that operates in 5150-5830 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted on a PCB with corresponding footprint and a 50 ohms transmission line. A Pi matching network should be placed between the radio and antenna feed pad.
- 02036142-05853 (HB2): 5GHz Band WiFi Onboard antenna that operates in 5150-5830 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted on a PCB with corresponding footprint and a 50 ohms transmission line. A Pi matching network should be placed between the radio and antenna feed pad.
- 02036142-05853 (HB3): 5GHz Band WiFi Onboard antenna that operates in 5150-5830 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted on a PCB with corresponding footprint and a 50 ohms transmission line. A Pi matching network should be placed between the radio and antenna feed pad.
- 02102142-07333 (HB4_C): 5GHz Band WiFi Balanced PCB antenna that operates in 5150-5830 MHz Band. It provides high efficient radiation with good cost benefits. The antenna is mounted using foam tape on the customer device. The antenna has a coax cable that is terminated with U.FL-style connector.

2. Measurement Quantity

The antennas were tested in full in an enclosure

- 02102073-07333A1 (LB1_C): Peak gain -- 3.47 dBi at 2500 MHz
- 02036073-7333B1 (LB2): Peak gain – 4.91 dBi at 2500 MHz
- 02036073-05853 (LB3): Peak gain – 4.23 dBi at 2500 MHz
- 02036142-05853 (HB1): Peak gain -- 4.70 dBi at 5350 MHz
- 02036142-05853 (HB2): Peak gain – 5.43 dBi at 5725 MHz
- 02036142-05853 (HB3): Peak gain – 4.61 dBi at 5725 MHz
- 02102142-07333 (HB4_C): Peak gain – 3.34 dBi at 5825 MHz

2-1. Correlated/Un-Correlated directional gain equation

Unequal antenna gains, with equal transmit powers. For antenna gains given by $G_1, G_2, \dots, G_N$ dBi

(i) If transmit signals are *correlated*, then

Directional gain = $10 \log[(10^{G_1/20} + 10^{G_2/20} + \dots + 10^{G_N/20})^2 / N_{ANT}]$ dBi [Note the “20”s in the denominator of each exponent and the square of the sum of terms; the object is to combine the signal levels coherently.]

(ii) If all transmit signals are *completely uncorrelated*, then

Directional gain = $10 \log[10^{G_1/10} + 10^{G_2/10} + \dots + 10^{G_N/10} / N_{ANT}]$ dBi

3. Measurement Method

The measurement setup is a spherical near-field scanner. The scanner system is housed in an integral/shielded anechoic chamber. The antenna under test (AUT) is mounted at the center of the chamber on an entirely foam pedestal. The pedestal rotates horizontally in the Azimuth (Phi). A wideband dual polarized horn antenna (probe) is mounted at a fixed distance away from the center of the chamber. The probe rotates along the elevation angle (Theta) and measures the radiation from the AUT. The measurement in the azimuth plane provides 360-degree of rotation whereas in the elevation plane it provides 180-degree of rotation. A software is used for post processing the measured data and calculate the far-field parameters including gain, directivity, and efficiency of the antenna.

4. Measurement Environment

Galtronics, USA use Howland 7200S Near Field anechoic chamber designed to interface with Howland Wireless Test Lab (WTL) is used to control the chamber hardware for antenna pattern measurements. Processing measurement scan results and generation of 'Far Field' and 'Gain & Directivity' files are done using Howland Spherical N2F software. The anechoic Chamber is 14'W x 16'H x 16'D without absorbers.

The DUT is placed on an NSI turntable (Phi Axis) in the center of the anechoic Chamber and 96" from the chamber floor. A probe is mounted on the theta axis. The probe used by Galtronics, USA is a Howland QR1, broadband, dual-polarization horn antenna operating in 700MHz to 10GHz. Theta and Phi axis are controlled by the Motion Control Unit from The Howland Company

The Chamber operates from 698MHz-7.5GHz. A Rohde & Schwarz ZVB8 Vector network analyzer (VNA) is used to generate and measure the RF signal fed through the DUT and the Probe antenna. The VNA is controlled by Howland WTL software in remote control mode.

The Chamber is validated periodically to ensure accuracy in antenna pattern measurements.

A photograph of two dolphins leaping from the ocean's surface. The dolphins are captured in mid-air, their bodies arched as they move from left to right. The background features a vibrant sunset with a bright sun low on the horizon, casting a golden glow across the sky and water. The sky is filled with soft, wispy clouds, and the ocean's surface shows gentle ripples.

CIG WindStream T3280 Antenna Performance

Galtronics Project: 7333A

Prepared by Junho Cha
July 31st , 2020

Introduction

W E ' R E M A K I N G W A V E S ™

- » Galtronics developed an antenna solution for CIG WindStream T3280
- » Galtronics received the new Hardware from CIG
- » There are two cabled antennas (LB1_C and HB4_C) and Five onboard (LB2, LB3, HB1, HB2, HB3) antennas
- » LB1_C and HB4_C are PCB cabled antennas and DC-grounded antennas.
- » LC matching component values:
 - LB 2 (PCB Onboard) : Add a series inductor (2.7 nH) : Existing component
 - LB 3 (Metal Onboard) : Add a shunt capacitor (1 pF) and a series inductor (1.5 nH) : Existing component
 - HB 3 (Metal Onboard) : 0 Ohm resistor : Updated component
- » Measured return loss, isolation, peak gain, efficiency, composite gain and gain pattern of the antennas

Appendix A – 5G Correlated and Uncorrelated Result

Freq (MHz)	5150	5250	5350	5725	5825
Correlated Gain	5.48	6.20	6.69	6.66	5.24
Uncorrelated Gain	0.68	1.37	1.80	1.54	-0.17
