

9H06 Product Labeling

The application must have a label applied to the external enclosure that identifies the regulatory approval codes applicable to the application, as well as any other required information. In cases where the application is too small to mount the full label, a smaller label may be placed where it can be viewed without excessive disassembly. Label placement is shown in Figs. 3a, 3b, 3c. The external label in Figs 3a or 3b is always installed so it can be seen when the 9H06 is fully assembled. The internal label in Fig. 3c is always installed so it can be seen when the battery cover is in place. In all case the interior and exterior labels are the same.

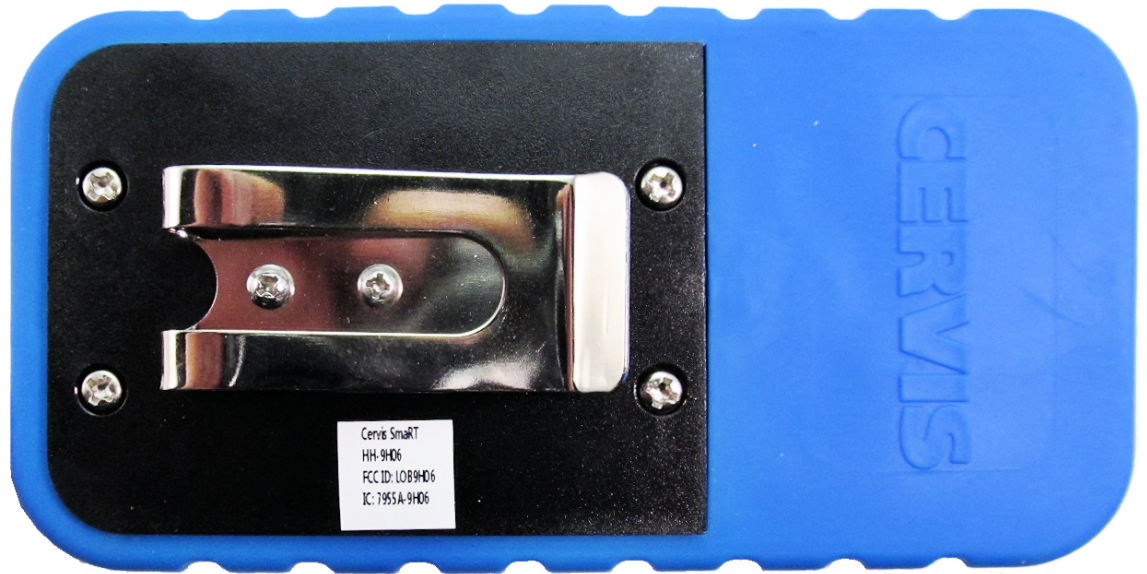

Fig. 3a: Label on enclosure exterior, belt clip.

Fig. 3b: Label on enclosure exterior, no belt clip.

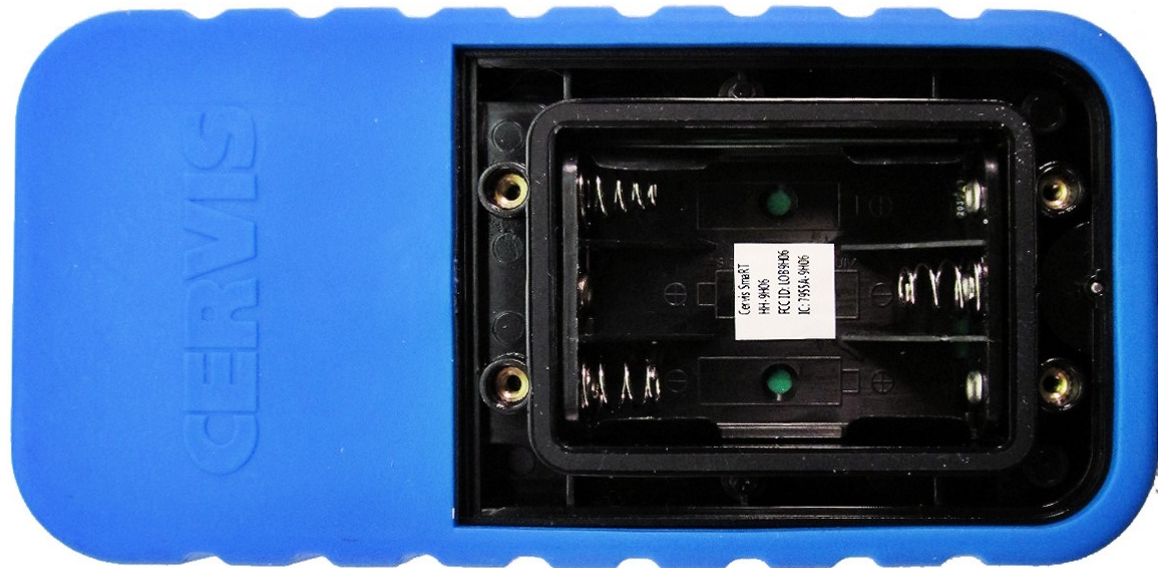

Fig. 3c: Label on enclosure interior.
