CERTIFICATION TEST REPORT

Manufacturer: **Structured Mining Systems, Inc.**
 d.b.a. Cervis Inc.
 170 Thorn Hill Road
 Warrendale, Pennsylvania 15086
 United States of America

Applicant: **Same As Above**

Product: **SmaRT 900 MHz 9H Radio Module**

Model: **SRF309**

FCC ID: **LOBSRF309**

Testing Commenced: **Feb. 20, 2014**

Testing Ended: **June 11, 2014**

Summary of Test Results: **Page 5**

Standards:

- ❖ **FCC Part 15 Subpart C, Section 15.247**
- ❖ **FCC Part 15, Subpart C, Section 15.207**
- ❖ **FCC Part 15, Subpart C, Section 15.209**

Evaluation Conducted by:

Joe Knepper, EMC Proj. Eng.

Michael Toth, Senior EMC Eng.

Ken Littell, EMC Tech. Mgr.

1 ADMINISTRATIVE INFORMATION

1.1 Measurement Location:

F2 Labs in Middlefield, Ohio. Site description and attenuation data are on file with the FCC's Sampling and Measurement Branch at the FCC Laboratory in Columbia, MD.

1.2 Measurement Procedure:

All measurements were performed according to the 2009 version of ANSI C63.4 and recommended FCC procedure of measurement of DTS operating under Section 15.247 and in KDB558074. A list of the measurement equipment can be found in Section 6.

1.3 Uncertainty Budget:

Radiated Emission

- Combined Uncertainty (+ or -) 2.67 dB
- Expanded Uncertainty (+ or -) 5.35 dB

Conducted Emissions

- Combined Uncertainty (+ or -) 1.88 dB
- Expanded Uncertainty (+ or -) 3.75 dB

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

1.4 Document History:

Document Number	Description	Issue Date	Approved By
F2LQ5978-01E	First Issue	June 13, 2014	W. Fuster

**2 SUMMARY OF TEST RESULTS**

Test Name	Standard(s)	Results
-6dB Occupied Bandwidth	CFR 47 Part 15.247(a)(2) / KDB558074	Complies
Conducted Output Power	CFR 47 Part 15.247(b)(3) / KDB558074	Complies
Conducted Spurious Emissions	CFR 47 Part 15.247(d) / Part 15.209 / KDB558074	Complies
Radiated Spurious Emission with 1.49dBi Integral Antenna	CFR 47 Part 15.247(d) / Part 15.209 / KDB558074	Complies
Radiated Spurious Emission with 9dBi Whip Antenna	CFR 47 Part 15.247(d) / Part 15.209 / KDB558074	Complies
Peak Power Spectral Density	CFR 47 Part 15.247(e) / KDB558074	Complies
Conducted Emissions	CFR 47 Part 15.207(a)	Complies

Note: Product was operated using AAA batteries. There is an option for the Host product to be powered from other DC sources, so Voltage Variation testing in 15.31(3)(e) was performed using 12VDC as the nominal voltage, and then the 85% and 115% of that voltage was tested also. The output power at the High, Mid, and Low channels was measured to verify how much the power and frequency was affected by the variation of the input power. No shift in frequency or power was measured at either of the varied voltages on any of the channels

Modifications Made to the Equipment
None

**3 TABLE OF MEASURED RESULTS**

Test	High Channel 924 MHz	Mid Channel 916 MHz	Low Channel 906 MHz
Conducted Output Power	6.339mW (8.02dBm)	6.561mW (8.17dBm)	7.261mW (8.61dBm)
Conducted Output Power Limit	1 Watt, (30dBm)	1 Watt, (30dBm)	1 Watt, (30dBm)
E.I.R.P. with 1.49dBi Integral Antenna	8.933mW (9.51dBm)	9.247mW (9.66dBm)	10.233mW (10.10dBm)
E.I.R.P. with 9dBi Whip Antenna	50.35mW (17.02dBm)	52.12mW (17.17dBm)	57.68mW (17.61dBm)
E.I.R.P. Limit	4 Watts, (36.02dBm)	4 Watts, (36.02dBm)	4 Watts, (36.02dBm)
Peak Power Spectral Density	-3.38 dBm	-3.19 dBm	-2.92 dBm
Peak Power Spectral Density Limit	8 dBm	8 dBm	8 dBm
-6dB Occupied bandwidth	.51282 MHz	.51603 MHz	.50641 MHz
-6dB Occupied Bandwidth Limit	≥ 500KHz	≥ 500KHz	≥ 500KHz

4 ENGINEERING STATEMENT

This report has been prepared on behalf of Cervis Inc. to provide documentation for the testing described herein. This equipment has been tested and found to comply with parts 15.247, 15.207 and 15.209 of the FCC Rules using ANSI C63.4 2009 and KDB558074 standards. The test results found in this test report relate only to the items tested.

5 EUT INFORMATION AND DATA

5.1 Equipment Under Test:

Product: SmarT 900 MHz 9H Radio Module

Model: SRF309

Serial No.: None

FCC ID: LOBSRF309

5.2 Trade Name:

Structured Mining Systems, Inc. d.b.a. Cervis Inc.

5.3 Power Supply:

Non-rechargeable AAA Batteries

5.4 Applicable Rules:

CFR 47, Part 15.247, subpart C

CFR 47, Part 15.207

CFR 47, Part 15.209

5.5 Equipment Category:

Radio Transmitter-DTS

5.6 Antenna:

1.49dBi gain Integral Antenna

9dBi gain Whip Antenna

5.7 Accessories:

N/A

5.8 Test Item Condition:

The equipment to be tested was received in good condition.

5.9 Testing Algorithm:

The EUT was configured to permit frequency changes from low-mid-upper transmission channel using digital modulation (required for digital transmission systems). For RF antenna conducted tests, the EUT was equipped with an SMA connector for connection to the measuring equipment. For radiated emissions tests, in a semi-anechoic chamber and on the OATS, the EUT was equipped with integral/internal chip antenna and an external Whip antenna. The highest emissions were recorded in the data tables.

**6 LIST OF MEASUREMENT INSTRUMENTATION**

7 FCC PART 15.247(a)(2) – OCCUPIED BANDWIDTH

7.1 Requirements:

The 6dB bandwidth shall be greater than 500 kHz.

Bandwidth measurements were made at the low (906 MHz), mid (916 MHz) and upper (924 MHz) frequencies. The bandwidth was measured using the analyzer's marker function.

7.2 Occupied Bandwidth Test Data

Test Date:	Mar. 24, 2014	Test Engineers:	K. Littell
Standards:	CFR 47 Part 15.247(a)(2); KDB558074	Air Temperature:	20.6°C
		Relative Humidity:	45%

Low Channel

Date: 24.MAR.2014 08:07:21

Mid Channel

Date: 24.MAR.2014 08:10:31

High Channel

Date: 24.MAR.2014 08:04:29

8 FCC PART 15.247(b)(3) – CONDUCTED OUTPUT POWER

The EUT antenna port was fitted with an SMA connector and directly connected to the input of the receiver. The peak power output was measured.

8.1 Requirements:

The peak power output shall be 1 watt (30 dBm) or less when using an antenna with a gain of less than 6dBi. For antennas having a gain of more than 6dBi, the limit is reduced by 1dB for every dB the antenna gain is over 6dBi.

8.2 Conducted Output Power Test Data

Test Date:	Mar. 24, 2014	Test Engineers:	J. Knepper; K. Littell
Standards:	CFR 47 Part 15.247(b)(3); KDB558074	Air Temperature:	21.1°C
		Relative Humidity:	44%

Low Channel

Date: 24.MAR.2014 07:56:01

Mid Channel

Date: 24.MAR.2014 07:57:04

High Channel

Date: 24.MAR.2014 07:58:23

9 FCC Part 15.247(c) – CONDUCTED SPURIOUS EMISSIONS

The following tests were performed to demonstrate compliance.

RF Antenna Conducted Test

The EUT antenna port was fitted with an SMA connector and directly connected to the input of the spectrum analyzer.

9.1 Requirements:

All Spurious Emissions must be at least 20dB down from the highest emission level measured within the authorized band up through the tenth harmonic.

Spurious emissions measurements were made at the low, mid, and upper channels with the appropriate spectrum analyzer impulse bandwidth. Additionally, 20dB down points were measured for the low and high channels to verify band edge compliance.

9.2 Test Data – CONDUCTED SPURIOUS EMISSIONS

Test Date:	Feb. 27, 2014	Test Engineers:	J. Knepper; K. Littell
Standards:	CFR 47 Part 15.247(d) / Part 15.209; KDB558074	Air Temperature:	20.3°C
		Relative Humidity:	47%

Low Channel: 9 kHz to 150 kHz

Low Channel: 150 kHz to 30 MHz

Low Channel: 30 MHz to 900 MHz

Low Channel: 900 MHz to 930 MHz

Low Channel: 930 MHz to 1 GHz

Low Channel: 1 GHz to 9.25 GHz

Mid Channel: 9 kHz to 150 kHz

Mid Channel: 150 kHz to 30 MHz

Mid Channel: 30 MHz to 900 MHz

Mid Channel: 900 MHz to 930 MHz

Mid Channel: 930 MHz to 1 GHz

Mid Channel: 1 GHz to 9.25 GHz

High Channel: 9 kHz to 150 kHz

High Channel: 150 kHz to 30 MHz

High Channel: 30 MHz to 900 MHz

High Channel: 900 MHz to 930 MHz

High Channel: 930 GHz to 1 GHz

High Channel: 1 GHz to 9.25 GHz

10 RADIATED SPURIOUS EMISSION

The EUT antenna port was fitted with its integral/internal chip and 9dBi whip antennae. Radiated emissions were measured on the Open Area Test Site (OATS). All emissions generated that fall in the restricted bands per FCC Part 15.205 were examined.

10.1 Requirements:

All emissions that fall in the restricted bands defined in FCC Part 15.205 shall not exceed the maximum field strength listed in FCC Part 15.209(a).

10.2 Radiated Spurious Emission Test Data

Test Dates:	Mar. 7, 2014	Test Engineers:	J. Knepper; K. Littell
Standards:	CFR 47 Part 15.247(d); Part 15.209 / KDB558074	Air Temperature:	19.2°C
		Relative Humidity:	55%

Notes: Plots are peak, max hold pre-scan data included only to determine what frequencies to investigate and measure. During the pre-scan evaluation, the EUT was rotated in all possible directions to find the maximum emissions. Out of the three orthogonal positions, the orthogonal position that showed the highest emissions was used. At some frequencies, no emissions from the EUT were measurable over the ambient noise floor. The readings did not change with EUT on and EUT off.

At least 6 of the highest frequencies were measured per ANSI 63.4 on the Open Area Test Site. Frequencies below 1GHz were measured using a quasi-peak detector. The antenna was raised between 1 and 4 meters and the EUT turntable was rotated 360 degrees to maximize the emissions. Some of the frequencies did not change with the EUT on or off. At those frequencies, the test distance was shortened to 1 meter and still no emissions from the EUT were visible or over the ambient or limit.

The equipment was fully exercised with all cabling attached to the EUT and was positioned for maximum emissions. The EUT antenna was positioned flat against the plastic tabletop and it was verified, by placing a foam support between the table and the antenna, that the table had no effect on the emissions at these frequency ranges.

11 FCC PART 15.247 – PEAK POWER SPECTRAL DENSITY (PSD)

Peak power spectral density measurements were performed.

11.1 Requirements:

The peak power spectral density shall not exceed +8dBm in any 3 kHz band during any time interval of continuous transmission.

Power spectral density measurements were performed at a resolution bandwidth of 3 kHz (video bandwidth set at 10 KHz). The peak spectral densities were measured at the low, mid, and upper channels.

11.2 Peak Power Spectral Density Test Data

Test Date:	Feb. 26, 2014	Test Engineers:	J. Knepper; K. Littell
Standards:	CFR 47 Part 15.247; KDB558074	Air Temperature:	20.7°C
		Relative Humidity:	45%

12 CONDUCTED EMISSIONS

12.1 Requirements

In accordance with FCC CFR 47 Part 15.207(a), "Except as shown in paragraphs (b) and (c) of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

Frequency of emission (MHz)	Conducted limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

*Decreases with the logarithm of the frequency.

12.2 Procedure

The EUT was placed on a 1.0 x 1.5 meter non-conductive table, 0.8 meter above a horizontal ground plane and 0.4 meter from a vertical ground plane. Power was provided to the EUT through a LISN bonded to a 3 x 2 meter ground plane. The LISN and peripherals were supplied power through a filtered AC power source. The output of the LISN was connected to the input of the receiver via a transient limiter, and emissions in the range 150 kHz to 30 MHz were measured. The measurements were recorded using the quasi-peak and average detectors as directed by the standard, and the resolution bandwidth during testing was 9 kHz. The raw measurements were corrected to allow for attenuation from the LISN, transient limiter and cables

12.3 Conducted Emissions Test Data

Test Date:	Apr. 21, 2014	Test Engineer:	J. Knepper
Rule:	15.207(a)	Air Temperature:	25.2° C
Test Results:	Pass	Relative Humidity:	44%

Note: The test data in this section represents the worst case results of all three channels

Conducted Test – Line 1: 0.15 MHz to 0.5 MHz

Conducted Test – Line 1: 0.5 MHz to 5.0 MHz

Conducted Test – Line 1: 5.0 MHz to 30.0 MHz
