"Description of Circuit Functions"

SMARTHOME PRODUCTS (SHENZHEN) CO., LTD.**MODEL: WC801P CHIME RECEIVER**
TECHNICAL DESCRIPTION

Model WC801P door chime receiver is part of the wireless door chime system series. The circuit is operated at 110V AC source. The receiver consists of a single Transistor that is worked as a regenerative detector operating at 315MHz. Its output is connected to a comparator circuit that senses the presence or absence of a received RF carrier signal, thus producing a digital output that is decoded by the digital portion of the circuit.

The receiver is a plug-in model and works in UL standard outlet. The circuit is contained on a single printed circuit board and a double printed circuit board which is mounted in a plastic case approximately 99 × 65 × 34mm. A house coding circuit can be programmed by 16 bits switch to repond to 16 different recognition codes.
