COMMENT:

- There have not been found any emissions from the EUT which are higher than the ambient noise in the frequency range 9 kHz – 40 GHz.
- The spectrum analyser transducers "TDF SUCOFLEX 126B", "TDS TS_DUT_CAL" and "TDS UFA147A" contains the attenuation of the used measurement cable.
- The spectrum analyser transducers "HFH2-Z2", "VUBA916", "HF906_001", ETS3160-09", "ETS3160-10" contains the antenna factor of the used measurement antenna.
- The measurement plot contains no measurement distance correction.
- The correction factor for the difference between measurement distance and limit has been subtracted in the result tables within this chapter.
Example calculation:
Measurement distance: 7 m, Limit distance: 3.0 m
Correction factor: $20 \text{ LOG}(7/3) = 7.4 \text{ dB}$
Value in plot: 65.75 dBμV/m
Value in table: $65.75 \text{ dBμV/m} + 7.4 \text{ dB} = 73.15 \text{ dBμV/m}$
- Due to the bigger measurement distance, the plots in following frequency ranges have been splitted in several plots, because the RBW and the VBW must be adapted to keep the noise value below the limit. The detailed analyser settings for each frequency range can be found directly in the analyser plots:
 - 1 GHz – 18 GHz; 1 GHz – 13 GHz, 13 GHz – 18 GHz
 - 26.5 GHz – 40 GHz; 26.5 GHz – 31.5 GHz, 31.5 GHz- 36.5 GHz, 36.5 GHz – 38.5 GHz, 38.5 GHz – 40.0 GHz

5.3.4.1 RESULTS OF WORST-CASE SEARCH

$D_{\text{STABLE DECREASE}} = 23.0 \text{ m}$

Worst- case receiving antenna polarisation: horizontal

5.3.4.2 MEASUREMENT PLOT (EXAMPLE PLOT, SHOWING WORST CASE, IF APPLICABLE)

Noise Level, Ambient, Frequency Range = 9 kHz -30 MHz, three-axes
