COMMENT:

- The spectrum analyser transducer "TDF DUT_CAL" contains the attenuation of the measurement cable
- The spectrum analyser transducer contains "HF906_001" contains the antenna factor of the used antenna
- The measurement plot contains no measurement distance correction.
- The correction factor for the difference between measurement distance and limit has been regarded via the "reference level offset" in the analyser.

Example calculation:

Measurement distance: 7.0 m, Limit distance: 3.0 m

Correction factor: $20 \text{ LOG}(1.81/3) = -4.4 \text{ dB}$

COMMENT:

- The spectrum analyser transducer "TDF TS_DUT_CAL" contains the attenuation of the measurement cable
- The spectrum analyser transducer contains "HF906_001" contains the antenna factor of the used antenna
- For this location no measurement distance correction required, because the measurement distance is equal to the limit distance (3.0 m).

Sample calculation

$$E \text{ (dB } \mu\text{V/m)} = U \text{ (dB } \mu\text{V)} + AF \text{ (dB 1/m)} + Corr. \text{ (dB)}$$

U = Receiver reading

AF = Antenna factor

Corr. = sum of single correction factors of used cables, switch unit, distance correction, amplifier (if applicable)

distance correction = $-40 * \text{LOG}(d_{\text{Limit}}/d_{\text{used}})$

Linear interpolation will be used for frequencies in between the values in the table.

8 MEASUREMENT UNCERTAINTIES

Test Case	Parameter	Uncertainty
Field Strength of spurious radiation	Field strength	± 5.5 dB
Output Power	Power	± 5.5 dB
Power Spectral Density	Power	± 5.5 dB

The measurement uncertainties for all parameters are calculated with an expansion factor (coverage factor) $k = 1.96$. This means, that the true value is in the corresponding interval with a probability of 95 %.

The verdicts in this test report are given according the above diagram:

Case	Measured Value	Uncertainty Range	Verdict
1	below pass mark	below pass mark	Passed
2	below pass mark	within pass mark	Passed
3	on pass mark	within pass mark	Passed
4	above pass mark	within pass mark	Failed
5	above pass mark	above pass mark	Failed

That means, the laboratory applies, as decision rule (see ISO/IEC 17025:2017), the so-called shared risk principle.
