Hi

In the document M5ZANA(timing) , it explains that we can only transmit as often as once every ten seconds per 15.231(e) limitations . This device is just a redesign of an earlier analog transmitter (M5ZWOWANA) to cut the cost down . If you you have any further requests , just let me know

Hi John,

Our reviewers have identified this issue following the review of the application:

Please describe fully the devices operation as regards compliance with the 15.231(e) limitation on transmission frequency (at least 10 seconds between transmission).

Best regards

Barry C. Quinlan
