

**Application for Certification
For an RF Power Amplifier**

**EMR Corporation
22402 N. 19th Ave
Phoenix, AZ 85207**

RF Power Amplifier:

Part # 150-100

FCC ID: M7G-VHF150-100

REPORT # RC054741/00047

This report was prepared in accordance with the requirements of the FCC Rules and Regulations Part 2, Subpart J, 2.981 through 2.1005, Part 22, Part 90 and other applicable sections of the rules as indicated herein.

Prepared By:

Jake Tynes

**DNB Engineering, Inc.

1.0 ADMINISTRATIVE DATA

1.1 Certifications and Qualifications

I certify that DNB Engineering, Inc conducted the tests performed in order to obtain the technical data presented in this application. Also, based on the results of the enclosed data, I have concluded that the equipment tested meets or exceeds the requirements of the Rules and Regulations governing this application.

1.2 Measurement Repeatability Information

The test data presented in this report has been acquired using the guidelines set forth in FCC Part 2.981 through 2.1005, Part 22, and Part 90. The test results presented in this document are valid only for the equipment identified herein under the test conditions described. Repeatability of these test results will only be achieved with identical measurement conditions. These conditions include: The same test distance, EUT Height, Measurement Site Characteristics, and the same EUT System Components. The system must have the same Interconnecting Cables arranged in identical placement to that in the test set-up, with the system and/or EUT functioning in the identical mode of operation (i.e. software and so on) as on the date of the test. Any deviation from the test conditions and the environment on the date of the test may result in measurement repeatability difficulties.

All changes made to the EUT during the course of testing as identified in this test report must be incorporated into the EUT or identical models to ensure compliance with the FCC regulations.

A handwritten signature in black ink, appearing to read 'Bryan Broaddus', is written over a horizontal line.

Name of Manufacturer:		EMR Corporation

2.983(b) Equipment Description

The EUT is an RF Power Amplifier

Part Number: 150-100

FCC ID: M7G-VHF150-100

2.983(c) Anticipated Production Quantity

	One Unit
X	Multiple Units

2.983(d) Technical Description

See the Service Manual Included in Appendix B herein for the complete description.

2.983(d)(1) Type(s) of Emissions

F3E

2.983(d)(2) Frequency Range

150 MHz to 170 MHz

2.983(d)(3) Operating Power Level

100 Watts

2.983(d)(4) Maximum Power Allowed in Applicable Part(s) of the Rules

RULES PART	MAXIMUM POWER (WATTS)
Part 22.757	500 Watts
Part 90.35	500 Watts

2.983(d)(5) Final RF Amplifier Input Power

1 - 6 Watts

2.983(d)(6) Function of all Active Circuit Devices

Please Refer to Appendix B.

2.983(d)(7) Circuit Diagram

Refer to Figure in Appendix B.

2.983(d)(8) Instruction Book(s)

Refer to Appendix B.

2.983(d)(9) Tune-Up Procedure

Refer to Appendix B.

FIGURE 1: Circuit Diagram 2.983(d) (7)

SEE FIGURE IN APPENDIX B.

**FIGURE 2: Block Diagram
(Power Input/Output tests)**

2.983(e) Test Data

Refer to 2.983(e) (1) through 2.983(e) (7).

2.983(e)(1) Measurement of RF Power Output per 2.985

Definition: For RF Power Amplifiers.

Test Method: See FIGURE 2.

Output Power is measured across a precision 50 ohm load with a wide band sampling RF Voltmeter.

Test Results:

POWER OUTPUT			
FREQUENCY	NOMINAL VOLTAGE 13.8 VDC	85% VOLTAGE 11.73 VDC	115% VOLTAGE 15.87 VDC
160 MHz	100 Watts	96 Watts	105 Watts

**2.983(e)(2) Measurement of Modulation Characteristics per 2.987(b)
(1)**

This EUT is a Power Amplifier and contains no circuitry to modify the RF signal provided by the driver except to raise the power level.

2.983(e)(3) Measurement of Occupied Bandwidth per 2.989

Definition:

Occupied Bandwidth, that is the frequency bandwidth such that, below its upper frequency limits, the mean power radiated by a given emission.

Test Method: Connect the Equipment per FIGURE 3.

Measurements were made with the modulating signal at 2.5 kHz with 5 kHz of FM deviation.

Test Results: See Plots following FIGURE 3.

The center frequency of the signal did not shift with modulation. The Spectrum Bandwidth was well within the limits specified in the FCC Regulations.

**FIGURE 3: Block Diagram
(Occupied Bandwidth tests)**

2.983(e)(4) Measurement of Antenna Conducted Spurious Emissions

per 2.991

Definition:

Conducted Spurious Emissions are emissions at the antenna terminals on a frequency or frequencies which are outside an occupied band sufficient to ensure transmission of information of required quality for the class of communication desired. The reduction in the level of these spurious emissions will not affect the quality of the information being transmitted.

Conducted Spurious Emissions shall be attenuated below the maximum level of the carrier frequency in accordance with the following formula:

$$\text{Spurious attenuation in dB} = 43 + 10 \log_{10} P_o$$

Where P_o = Output in Watts

$$= 43 + 10 \log_{10} (30)$$

$$= 63 \text{ dB}$$

Test Method: Per EIA RS 152-B, Paragraph 4.

Connect the equipment as shown in FIGURE 4.

Adjust the Audio Oscillator so that the frequency deviation of the transmitter is a 5 kHz at a modulation frequency of 2.5 kHz. Adjust the Spectrum Analyzer to display the Modulated Carrier.

Scan the frequency spectrum from the lowest radio frequency generated in the equipment through the 10th harmonic of the carrier frequency.

Test Results: See Plots following FIGURE 4.

All spurious antenna conducted emissions are below the FCC Specifications.

FIGURE 4: Block Diagram

(Spurious Emissions tests)

2.983(e)(5) Measurement of Radiated Spurious Emissions per 2.993

Definition:

Emissions from the equipment when connected into a non-radiating load on a frequency or frequencies which are outside an occupied band sufficient to ensure transmission of information of required quality for the class of communication desired. The reduction in the level of these spurious emissions will not affect the quality of the information being transmitted.

Test Method: Per EIA RS 152-B.

Connect the equipment and follow the procedure described in paragraph 2.2.1.1 and paragraph 5.0. Measure the amplitude of each spurious radiated signal through the 10th harmonic. The level in dBuV/m is calculated on the following page. The spurious signals are then measured on the 3 meter range.

$$\text{Spurious attenuation dB} = 10 \log \frac{\text{Po Watts}}{\text{Calc. Spurious power}}$$

Test Results: See TABLE I on following Page.

All radiated spurious emissions are below the FCC Specifications.

$$\text{FUNDAMENTAL FIELD STRENGTH (V/m)} = 1/3 (R_o \times P_o)^{1/2} \quad 1/3 (50 \times 100)^{1/2} = 23.6 \text{ V/m}$$

 $R_o = \text{AMPLIFIER OUTPUT IMPEDANCE (Ohm)} \quad 50$
 $P_o = \text{AMPLIFIER OUTPUT POWER (WATTS)} \quad 100$

$$\text{FCC LIMIT} = 43 + 10 \text{ LOG } (P_o) = (\text{dBC}) \quad 43 + 10 \log(100) = 63 \text{ dBC}$$

$$\text{CONVERSION FROM } \mu\text{V/m TO dB}\mu\text{V/m} : \text{dB}\mu\text{V/m} = 20 \text{ LOG } (\mu\text{V/m}) \quad 120 + 20 \log(23.6) = 147.4 \text{ dB}\mu\text{V/m}$$

FCC RE

2.983(e)(6) Measurement of Frequency Stability per 2.995

The EUT is a power amplifier and contains no circuitry for generating or stabilizing the RF signal. The driver will be responsible for this task.

2.983(e)(7) Frequency Spectrum to be investigated per 2.997

The Frequency was searched from the lowest radio frequency generated in the equipment through the 10th harmonic of the carrier frequency.

2.983(f) FCC ID: Label

RF POWER AMPLIFIER	
MODEL NO.	FREQ
VOLTAGE	OUTPUT PWR
FCC ID: M7G-VHF150-100	SERIAL NO.

NOTES:

Label will be constructed of 0.02 inch aluminum as shown on the equipment with permanent adhesive.

All information on the label will be etched or stamped. Both methods will exceed the expected lifetime of the equipment.

The label will be large enough to allow all information to be legible.

2.983(g) Photographs and/or Drawings showing equipment construction techniques

Note: The Main Circuit Board shown in these photos has no components on the reverse side.
