

Attention: Lisa Tang

Enclosed is the FCC and Canada submittal for BRK Brands, Inc. All of the files are in one zip file. Please expedite this submittal. BRK has included a \$500 fee for this in their PO.

These are the two products that use the same RF sections for a class II permissive change. The FCC model is SA520. The IC model is SA520A. The SA520 and SA520A models are absolutely identical except for labeling and packaging.

An additional frequency was added. Previously the low channel was 906 MHz. The latest versions of the EUT have a low channel of 909.0 MHz. BRK would like to keep the same frequency range certified as previously. (905 to 924 MHz). The only other differences between the previously approved products and the revised ones are the transceiver/antenna board layout and a revision to the Integration IA4420 RFIC to resolve some power consumption and factory yield issues.

BRK Brands, Inc will be paying BACL for filing the submittal. Send the bill to BRK Brands, Inc. The billing address for BRK Brands, Inc is:
