Gentlemen:

This is in response to your letter dated August 21, 2000, Reference # 15713.

Item 1:

After receiving the modified OZEO phone from Philips, the first test performed by ITS was Spurious Radiated Emission. The device passed the test in worst case by margin of 18 dB. The second test performed by ITS was the SAR test. As a result of this test, the output power was reduced to ensure compliance.

As the radiated emission test passed with higher power, we considered that it is a worst case and did not retest radiated emission with reduced power. This is explanation why ERP/EIRP calculated from Field Strength measurement results is higher than calculated from conducted measurement results.

The ERP (for Part 22) and EIRP (for Part 24), calculated from conducted measurement results (measured when performing the SAR test), is done by taking into account the antenna gain: 1 dBi for 800 MHz band, and 2.4 dBi for 1800 MHz band.

for AMPS (800 MHz band): $ERP = 24.7 - 1.1 = 23.6 \text{ dBm}$ (230 mW)

for TDMA (800 MHz band): $ERP = 28.0 - 1.1 = 26.9 \text{ dBm}$ (490 mW)

for TDMA (1800 MHz band): $EIRP = 25.5 + 2.4 = 27.9 \text{ dBm}$ (617 mW)

We are submitting the revised 731 Form showing the new ERP/EIRP and RF Power Output data.

Item 2:

The revised pages of the users manual containing the RF exposure statement and operating requirements for body worn use are enclosed (see file titled "Precautions").

Item 3:

The revised pages of the users manual containing accessories that are applicable for this device are attached (see file "Accessories").

Item 4:

We are resubmitting the same 24 SAR plots in color to replace the black & white plots that you already have.

Should you need more or have questions, please feel free to contact the undersigned.

Sincerely,
