Family of models for SoHo pressure implants

| Same PCBA for both models                                                         | Model#   | No. of Catheters | Battery | Size Vol (CC) | Package                                                                             |
|-----------------------------------------------------------------------------------|----------|------------------|---------|---------------|-------------------------------------------------------------------------------------|
|  | SoHo-X10 | 1                | SR916SW | 1.2           |  |
|                                                                                   | SoHo-S10 | 1                | CR1632  | 4.4           |  |

The only difference between the two models is the size. The PCBA is identical but SoHo-S10 utilizes larger batteries, such that the life of the implant's function can be extended for larger species.
