

MEASUREMENT / TECHNICAL REPORT

ICP vortex Computersysteme GmbH

SCSI-Controller GDT6538RD

FCC ID: MJLMONA6X38RD

December 21st, 1998

Equipment type: SCSI-Controller
Tested Type: GDT6538RD

Request issue of grant: ☒ Immediately upon completion of review
☐ Defer grant per 47 CFR 0.457(d)(1)(ii) until _____
date _____. Company Name agrees to notify the
Commission by _____ date _____ of the intended
date of announcement of the product so that the
grant can be issued on that date.

Measurement procedure
used: ☒ ANSI C63.4-1992
☐ FCC/OET MP-4(1987)
☒ EN 55022:1994-08 / A:1995-05

Applicant for Certification

1.1 Description

- **Hardware RAID Controllers with RAID 0, RAID 1, RAID 4, RAID 5 and RAID 10 Array Drives** at controller level, completely independent of the computer system and the operating system. Several Array Drives can be operated simultaneously.
- **"Private"** (i. e, for one Array Drive) or **"Pool"** (i. e, for several Array Drives) **Hot Fix Drives**.
- **Online Capacity Expansion**. Add one or several new disk drives to an existing Array Drive to expand its capacity. During the Expansion all data are redundant.
- **Online RAID Level Migration**. Online change of an Array Drive's RAID Level e.g., from RAID 0 to RAID 5.
- **Online Capacity Expansion and RAID Level migration** can be performed simultaneously.
- **Configuration Utility (GDTSETUP) in ROM**. Express Setup option to easily setup Array Drives. Press „CTRL-G“ to load GDTSETUP, long before the operating system is booted.
- **Advanced Multi-Processor RISC Technology**.
- **On-Board i960RD © intelligent I/O Processor**. Completely offloads the host CPU.

- 1, or 2 Fibre Channel Interfaces with HP Tachyon and onboard copper transceivers with 100 MB/s channel Support of Arbitrated Loop Technology
- Up to 25 meters with copper cable. Standard DB9 connectors.
- Support of MIAs for large cable length.
- 1 full-featured additional Wide/Ultra SCSI channel for legacy SCSI devices (hard disks, CD-ROMs, etc.) with third generation 32 SCSI RISC processors and an active, software-switchable termination. Dual connector system (50 pin and 68 pin connector). Synchronous data transfer rate up to 40 MB/sec.
- Cache RAM: 8MB, 16 MB, 32 MB, 64 MB or 128 MB. One standard 72 PIN, 32 Bit or 36 Bit PS/2 SIMM. FPM or EDO Dynamic-RAM technology. With EDO SIMMs increased performance. Automatic cache RAM detection.
- Intelligent multi-level cache-algorithm with adaptive delayed write and read ahead functions. This ensures an optimized cache for various load profiles and system requirements.
- On-Board PCI 2.x compatible BIOS (Plug & Play).
- BIOS, Firmware and GDTSETUP in Flash-RAM. Easy update through floppy disk or BBS-download.
- GDTMON. Monitor program for the diagnosis (also remote) of ICP Controllers & Array Drives.
The tool allows you to optimize existing configurations.
- Drivers for MS-DOS, Novell NetWare, SCO UNIX V/368, Interactive UNIX, UnixWare, Linux, Windows NT, Windows 95, and OS/2. ASPI-Manager for DOS, Windows and Novell NetWare. I₂O ready controller deign.

1.2 Related Submittal Grant

With this application no equipment authorization has been submitted for a grant.

1.3 Tested System Details

The FCC IDs for all equipment, plus description of all cables used in the tested system are:

Model Number (Serial Number)	FCC ID	Description	Cable Description
SONY CPD-1791 (510449)	AK8CPD1604S	17" monitor	Unshielded power cord shielded video cable
HP VECTRA 510 (FR62163245)	HCJVECTRAVL5	PC	Unshielded power cord
HP P/N: C3751A (LTC43908285)	DZL210472	Mouse	Shielded power cord
HP P/N: C3754A (E03633LXGR)	CIGE03614	Keyboard	Shielded power cord
HP 2225C (3210S05807)	DSI6XU2225	Printer, parallel I/F	unshielded power cord shielded centronics parallel cable
HP 2225D (3210S05807)	DSI6XU2225	Printer, parallel I/F	unshielded power cord shielded centronics parallel cable

1.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures in EN 55022:1994-08 class B. Radiated testing was performed at an antenna to EUT distance of 10 meters at an open area test site.

1.5 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is recognized by the FCC Sampling and Measurements Branch, 7435 Oakland Mills Road, Columbia, MD 21046. This site has been fully described in a report dated December 02, 1993 submitted to your office, and accepted in a letter dated January 24, 1994 (31040/SIT).

After three years the update is accepted in a letter dated August 08th, 1997 (31040/SIT 1300F2).

3 SYSTEM TEST CONFIGURATION

3.1 Justification

The system was configured for testing in a maximum fashion (as a customer can use it). All external ports were connected with a peripheral unit (e.g. serial port connected to a serial printer, keyboard port connected to a ext. keyboard and so on). The monitor was powered from the wall outlet.

3.2 Video mode Justification

The system was tested in the standard VGA-video mode 640 x 480 pixel, 70 Hz vertical frequency and 35 kHz horizontal frequency.

3.3 Equipment Modifications

To achieve compliance to Class B levels, the following modifications were made by EMV Testhaus GmbH during compliance testing:

no modifications were carried out during testing.

The above modifications will be implemented in all production models of this equipment.

Applicant Signature _____ N/A _____ Date _____

Typed/Printed Name _____ Position _____

				side:	
				10/30	

3.4 Configuration of Tested System

All necessary tests were carried out like figure 3.1.

The system was used according to paragraph 1.1.

The PC-system was connected to the first LISN.

All peripherals, e.g. parallel printer, the subsystem and the monitor were supplied by a second LISN.

The EUT was connected to a PCI-slot of the PC and the three external SCSI- bus ports were terminated with three cables length 1m.

The equipment was configured according to ANSI C63.4-1992 Fig 11
(Page 45).

6 CONDUCTED EMISSION DATA

6.1 Test Procedure

The initial step in collecting conducted data is use of a Rhode & Schwarz Test Receiver (ESH3). First scan all data in peak mode. All significant peaks were explored in quasi-peak mode manually.

6.2 Measured Data

Judgment: Passed by 18.11 dB(μ V)

	Frequency [MHz]	Measured* [dB(μ V)]	Limit [dB(μ V)]
phase	0.210	44.70	63.21
neutral	0.210	45.10	63.21

*All readings are quasi-peak

7 RADIATED EMISSION DATA

7.1 Test Procedure

The measurement procedure is carried out manually by a test engineer. At all interference frequencies we vary the height of the antenna in horizontal and vertical alignment between 1m and 4m and turn the table from 0° to 360°.

7.2 Measured Data

Judgment: Passed by 1.2 dB(μV)/m

Frequency [MHz]	Polarity [V/H]	Measured Corrected* [dB(μV)]	Correction Factor [dB/m]	10 Meter Limit [dB(μV/m)]
400.01	H	35.8	18.7	37.0
240.00	H	34.4	14.2	37.0
480.01	H	30.2	21.0	37.0
240.00	V	35.7	14.2	37.0
400.00	V	32.1	18.7	37.0
50.02	V	24.9	10.3	30.0

*All readings are quasi-peak. The correction factor is considered automatically by the test receiver. A table of correction factors is given in paragraph 7.6.

7.5 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor automatically to the measured value. The display of the Receiver shows the corrected value. The complete table of correction factors is given on next page. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF$$

where FS = Field Strength

AF = Antenna Factor

CF = Cable Attenuation Factor

Assume a receiver reading of 28,5 dB μ V is obtained. The Antenna Factor of 10,5 and a Cable Factor of 1,3 is added, giving a field strength of 40,3 dB μ V/m.

$$FS = 28,5 + 10,5 + 1,3 = 40,3 \text{ dB}\mu\text{V/m}$$

The 40,3 dB μ V/m value can be mathematically converted to its corresponding level in μ V/m.

Level in μ V/m =

Common Antilogarithm $[(40,3 \text{ dB}\mu\text{V/m})/20] =$

103,5 μ V/m
