EMI TEST REPORT

JQA APPLICATION NO. : 400-30121

Model No. : MB200-B2

Type of Equipment : Barcode Printer

Regulations Applied : CFR 47 FCC Rules and Regulations Part 15

FCC ID : MMFMB200-B2

Applicant : Sato Corporation

Address : 1-207, Onari-cho, Omiya-ku, Saitama 330-0852, Japan

Manufacturer : Sato Corporation

Address : 1-207, Onari-cho, Omiya-ku, Saitama 330-0852, Japan

Received date of EUT : June 2, 2003

Final Judgment : Passed

Test results in this report are obtained in use of equipment that is traceable to National Institute of Advanced Industrial Science and Technology (AIST) of Japan and Communication Research Laboratory (CRL) of Japan.

The test results only respond to the tested sample. This report should not be reproduced except in full, without the written approval of JQA EMC Engineering Dept. Testing Div.

1 DOCUMENTATION

1.1 TEST REGULATION

FCC Rules and Regulations Part 15 Subpart B and Subpart C

Test procedure :

The tests were performed with reference to the FCC Public Notice DA 00-705, released March 30, 2000. The test set-up was made in accordance to the general provisions of ANSIC63.4-1992.

1.2 GENERAL INFORMATION

1.2.1 Test facility :

- 1) Test Facility located at EMC Engineering Dept. Testing Div. :
 - No.2 and 3 Anechoic Chambers(3 meters Site).
 - Shielded Enclosure.

Expiration date of FCC test facility filing : May 27, 2005

- 2) EMC Engineering Dept. Testing Div. is recognized under the National Voluntary Laboratory accreditation Program for satisfactory compliance established in title 15, Part 285 Code of Federal Regulations.

NVLAP Lab Code : 200189-0 (Effective through : June 30, 2003)

1.2.2 Description of the Equipment Under Test (EUT) :

- | | |
|--------------------------------------|-----------------------------------|
| 1) Type of Equipment | : Barcode Printer |
| 2) Product Type | : Production |
| 3) Category | : Spread Spectrum Transmitter |
| 4) EUT Authorization | : Certification |
| 5) FCC ID | : MMFMB200-B2 |
| 6) Trade Name | : Barcode Printer |
| 7) Model No. | : MB200-B2 |
| 8) Operating Frequency Range | : 2402 MHz - 2480 MHz |
| 9) Highest Frequency Used in the EUT | : 2480 MHz |
| 10) RF Output Power | : 1 mW(Rated) |
| 11) Serial No. | : 20680001 |
| 12) Date of Manufacture | : - |
| 13) Power Rating | : DC 7.2-9.0V from the AC Adaptor |
| 14) EUT Grounding | : None |

1.2.3 Definitions for symbols used in this test report :

- x - indicates that the listed condition, standard or equipment is applicable for this report.
- indicates that the listed condition, standard or equipment is not applicable for this report.

1.3 TEST CONDITION

1.3.1 The measurement of Channel Separation

 x - was performed.

 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.2 The measurement of Minimum Hopping Channel

 x - was performed.

 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.3 The measurement of Occupied Bandwidth

 x - was performed.

 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.4 The measurement of Dwell Time x - was performed. - was not applicable.**Used test instruments :**

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.5 The measurement of Peak Output Power and Density (Conduction) x - was performed. - was not applicable.**Used test instruments :**

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A
Power Meter	AU03
Power Sensor	AU04
Signal Generator	SG03

1.3.6 The measurement of Peak Output Power and Density (Radiation)

 x - was performed in the following test site.

 - was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div.

21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

 x - No. 2 site (3 meters)

1.6 SUMMARY

General Remarks :

The EUT was tested according to the requirements of FCC Rules and Regulations Part 15 Subpart B and Subpart C under the test configuration, as shown in clause 1.7 to 1.10.

The conclusion for the test items which are required by the applied regulation is indicated under the final judgment.

Final Judgment :

The "as received" sample;

- x - fulfill the test requirements of the regulation mentioned on clause 1.1.
- fulfill the test requirements of the regulation mentioned on clause 1.1, but with certain qualifications.
- doesn't fulfill the test regulation mentioned on clause 1.1.

Begin of testing : June 2, 2003

End of testing : June 14, 2003

1.7 TEST CONFIGURATION / OPERATION OF EUT

1.7.1 Test Configuration

The equipment under test (EUT) consists of :

Symbol	Item	Manufacturer	Model No.	FCC ID	Serial No.
A	Barcode Printer	Sato Corporation	MB200-B2	MMFMB200-B2	20680001

Note: This Barcode Printer was operated with the AC adaptor (below symbol "B" Input:120VAC 60Hz, Output:8.4VDC by Sino-American).

The measurement was carried out with the following support equipment connected :

Symbol	Item	Manufacturer	Model No.	FCC ID	Serial No.
B	AC Adaptor	Sino-American	SA130A-0930U-S	N/A	None
C(*1)	Interface Board for Test Mode Operation	-	None	N/A	None

(*1) This support equipment is a temporary board that is achieved the test mode.

Type of Cable :

Symbol	Description	Identification (Manufacturer etc.)	Connector Shielded YES / NO	Cable Shielded YES / NO	Ferrite Core	Length (m)
1	AC adapter Cable(for Input)	-	NO	NO	NO	2.0
2	AC adapter Cable(for Output)	-	NO	NO	NO	2.0
3	RS-232C Cable	-	YES	YES	NO	1.1
4(*2)	Signal Cable	-	NO	NO	YES	0.1
5(*2)	DC Cable	-	NO	NO	YES	0.3
6(*2)	RS-232C Cable	-	NO	NO	YES	0.3

(*2) This cable is a temporary cable that is achieved the test Mode.

1.7.2 Operating condition

Power supply Voltage : 120 VAC, 60Hz for AC Adaptor

The tests have been carried out the following mode.

- 1) TX mode (2402 MHz)
- 2) TX mode (2441 MHz)
- 3) TX mode (2480 MHz)
- 4) Inquiry mode
- 5) Paging mode
- 6) Hopping ON mode
- 7) Hopping OFF mode
- 8) RX mode

1.7.3 Generating and Operating frequency of EUT

16 MHz and 2402 MHz to 2480 MHz

1.8 EUT ARRANGEMENT (DRAWINGS)

1.9 PRELIMINARY TEST AND TEST-SETUP (DRAWINGS)

1.9.1 Channel Separation

The EUT have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = wide enough to capture the peaks of two adjacent channels

Resolution (or IF) Bandwidth (RBW) $\geq 1\%$ of the span

Video (or Average) Bandwidth (VBW) $\geq$ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-delta function to determine the separation between the peaks of the adjacent channels.

1.9.2 Minimum Hopping Channel

The EUT have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = the frequency band of operation

RBW $\geq 1\%$ of the span

VBW $\geq$ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. It may prove necessary to break the span up to sections, in order to clearly show all of the hopping frequencies.

Measurement setup is same as sub-clause 1.9.1.

1.9.3 Occupied Bandwidth

Use the following spectrum analyzer settings:

Span = approximately 2 to 3 times the 6 dB or 20 dB bandwidth, centered on a channel

RBW $\geq$ 1% of the 6 dB or 20 dB bandwidth

VBW $\geq$ RBW

Sweep = auto

Detector function = peak

Trace = max hold

The EUT should be transmitting at its maximum data rate. Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 6 dB or 20 dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is (as close as possible to) even with the reference marker level. The marker-delta reading at this point is the 6 dB or 20 dB bandwidth of the emission. If this value varies with different modes of operation (e.g., data rate, modulation format, etc.), repeat this test for each variation.

Measurement setup is same as sub-clause 1.9.1.

1.9.4 Dwell Time

The EUT must have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = zero span, centered on a hopping channel

RBW $\leq$ Channel Separation

VBW $\geq$ RBW

Sweep = as necessary to capture the entire dwell time per hopping channel

Detector function = peak

Trace = max hold

If possible, use the marker-delta function to determine the dwell time. If this value varies with different modes of operation (e.g., data rate, modulation format, etc.), repeat this test for each variation.

Measurement setup is same as sub-clause 1.9.1.

1.9.5 Peak Output Power (Conduction)

(Step 1) Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW > the 20 dB bandwidth of the emission being measured

VBW ≥ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Record the reading P1.

(Step 2) Replace the EUT with the signal generator. Adjust the level of the signal generator output until the reading P1.

(Step 3) Replace the spectrum analyzer with the power meter. Record the reading of power meter P2. The peak output power of the EUT is P2.

Step 1

Step 2

Step 3

1.9.6 Peak Power Density (Conduction)

Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW = Specified Value

VBW ≥ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission.

Measurement setup is same as sub-clause 1.9.1.

1.9.7 Peak Output Power and Peak Power Density (Radiation)

The radiated power output and the field strength of the transmitter radiation were measured at the distance at 3 meters away from the transmitter under test which was placed on a turntable 0.8 meter in height. The receiving antenna was oriented for vertical polarization and raised or lowered through 1 to 4 meters until the maximum signal level was detected on the measuring instrument. The transmitter under test was rotated through 360° until the maximum signal was received. The measurement was repeated with the receiving antenna in the horizontal polarization.

The transmitter was removed and replaced with the antenna. The center of the antenna was placed approximately at the same location as the center of the transmitter. The antenna was fed with a signal generator, and the output level of the signal generator was adjusted to obtain the previously recorded maximum reading at the particular frequency and recorded. This procedure was repeated with the receiving antenna and the antenna in the orthogonal polarization.

The input power into the antenna was measured using the power meter. The level of the emissions in dBm(EIRP) were calculated from the following formula:

$$\text{Transmitter Power[dBm]}(\text{EIRP}) = (\text{Meter Reading of Power Meter}) + (\text{Antenna Gain[dBi]})$$

Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW : Greater than the 20 dB bandwidth of the emission being measured
or Specified Value

VBW ≥ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission.

1.9.8 Spurious Emission (Conduction)

Band-edge Compliance of RF Conducted Emissions

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the emission operating on the channel closest to the bandedge, as well as any modulation products which fall outside of the authorized band of operation

RBW $\geq$ 1% of the span

VBW $\geq$ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Set the marker on the emission at the bandedge, or on the highest modulation product outside of the band, if this level is greater than that at the bandedge. Enable the marker-delta function, then use the marker-to-peak function to move the marker to the peak of the in-band emission.

Now, using the same instrument settings, enable the hopping function of the EUT. Allow the trace to stabilize. Follow the same procedure listed above to determine if any spurious emissions caused by the hopping function also comply with the specified limit.

Spurious RF Conducted Emissions

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious emissions (e.g., harmonics) from the lowest frequency generated in the EUT up through the 10th harmonic. Typically, several plots are required to cover this entire span.

RBW = 100 kHz

VBW $\geq$ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Set the marker on the peak of any spurious emission recorded. The level displayed must comply with the limit specified in this Section.

Measurement setup is same as sub-clause 1.9.1.

1.9.9 Radiated Emission (9 kHz - 30 MHz) :

According to description of ANSI C63.4-1992 sec.13.1.4.1, the preliminary radiated emissions measurement were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

- Side View -

1.9.10 Radiated Emission (30 MHz - 1000 MHz) :

According to description of ANSI C63.4-1992 sec.13.1.4.1, the preliminary radiated emissions measurement were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

Anechoic Chamber

- Side View -

1.9.11 Radiated Emission (Above 1 GHz) :

According to description of ANSI C63.4-1992 sec.13.1.4.1, the preliminary radiated emissions measurements were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

Anechoic Chamber

- Side View -

1.9.12 AC Power Line Conducted Emission (450 kHz - 30 MHz) :

According to description of ANSI C63.4-1992 sec.13.1.3.1, the AC power line preliminary conducted emissions measurements were carried out.

The preliminary conducted measurements were performed using the spectrum analyzer to observe the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for final AC power line conducted emissions measurements.

2.4 Dwell Time

Date : June 2, 2003
 Temp.: 24 °C Humi.: 64 %

Mode of EUT : Hopping(DH1 packet)
 Test Port : Temporary antenna connector

Dwell Time (ms)	Limit
142.7	400 ms per 31.6 s

Note : The system makes worst case 1600 hops per second or 1 time slot has a length of 625 μ s with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 800 hops per second with 79 channels. So the system has each channel 10.1266 times per second and so for 31.6 seconds the system have 320.0 times of appearance. Each tx-time per appearance is 0.4459 ms.
 Dwell time = 320.0 * 0.4459 = 142.7 ms

Mode of EUT : Hopping(DH3 packet)
 Test Port : Temporary antenna connector

Dwell Time	Limit
(ms)	
272.6	400 ms per 31.6 s

Note : A DH3 Packet need 3 time slot for transmitting and 1 time slot for receiving.
 Then the system makes worst case 400 hops per second with 79 channels. So the system have each channel 5.063 times per second and so for 31.6 seconds the system have 160.0 times of appearance.
 Each tx-time per appearance is 1.704 ms.
 $Dwell\ time = 160.0 * 1.704 = 272.6\ ms$

Mode of EUT : Hopping(DH5 packet)

Test Port : Temporary antenna connector

Dwell Time Limit
(ms)
316.5 400 ms per 31.6 s

Note : A DH5 Packet need 5 time slot for transmitting and 1 time slot for receiving.
Then the system makes worst case 266.667 hops per second with 79 channels.
So the system have each channel 3.3755 times per second and so for 31.6 seconds
the system have 106.7 times of appearance.
Each tx-time per appearance is 2.966 ms.
Dwell time = 106.7 * 2.966 = 316.5 ms

Mode of EUT : Inquiry

Test Port : Temporary antenna connector

Dwell Time
(ms)

110.2 400 ms per 12.8 s

Note : The system have 32 hopping channel in Inquiry mode.

The time period = $32 * 0.4 = 12.8$ seconds

In maximum case the bluetooth system have three blocks of 2560 ms in 12.8 s period. One block has 256 burst at each hopping channel.

Each tx-time per appearance is 0.1435 ms.

Dwell time = $0.1435 * 256 * 3 = 110.2$ ms

Mode of EUT : Paging

Test Port : Temporary antenna connector

Dwell Time Limit
(ms)

110.2 400 ms per 12.8 s

Note : The system have 32 hopping channel in Paging mode.

The time period = $32 * 0.4 = 12.8$ seconds

In maximum case the bluetooth system have three blocks of 2560 ms in 12.8 s period. One block has 256 burst at each hopping channel.

Each tx-time per appearance is 0.1435 ms.

Dwell time = $0.1435 * 256 * 3 = 110.2$ ms
