Spurious emissions (radiated) 9 kHz – 5 GHz

Standard: ANSI C63.26-2015
Tested by: LAS
Date: 16 June – 4 July 2022 5 June 2021
Temperature: 23 ± 3 °C
Humidity: 20 - 75 % RH
Barometric pressure: 860 - 1060 hPa
Measurement uncertainty: ± 5.29 dB. level of confidence 95.45 % (k = 2)
Test result: **PASS**

FCC Rule: §90.210
RSS-119 5.8

For transmitters that are not equipped with an audio low-pass filter. the power of any emission must be attenuated below the unmodulated carrier output power (P) as follows: on any frequency removed from the center of the authorized bandwidth by more than 250 percent of the authorized bandwidth; at least 43 + 10 log (P) dB.

For transmitters designed to operate with a 12.5 kHz channel bandwidth. any emission must be attenuated below the power (P) of the highest emission contained within the authorized bandwidth as follows: on any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 12.5 kHz: at least 50 + 10 log (P) or 70 dB. whichever is the lesser attenuation.

Frequency Band (MHz)	Channel Bandwidth (kHz)	Authorized Bandwidth (kHz)	Limit (dBm)
406.1-430 and 450-470	12.5	11.25	-20
	25	20	-13

Test plan

The test was performed in a semi-anechoic chamber. The EUT was placed on a non-conductive table standing on a turntable. The distance between the EUT and the measurement antenna was 3 m. In order to find the maximum levels of the disturbance radiation the angle of the turntable. and the height of the measuring antenna were varied during the tests. The test was performed with the measurement antenna in both horizontal and vertical polarizations.

The EUT is tested in different combinations of channel bandwidth. TX frequency. and EUT orientation. If emissions near the limit are detected with any combination. other combinations are investigated as well. The antenna connector was terminated with a 50 Ω load.

Frequency stability

Standard: ANSI C63.26-2015
Tested by: PKA
Date: 25 – 26 July 2022
Temperature: 23 ± 3 °C
Humidity: 20 - 75 % RH
Barometric pressure: 860 - 1060 hPa
Measurement uncertainty: ± 0.470 dB (level of confidence 95.45 % (k = 2))
Test result: **PASS**

FCC Rule: §90.213**RSS-119 5.3**

Frequency stability is a measure of drift due to temperature and supply voltage variations. with reference to the frequency measured at an appropriate reference temperature and the rated supply voltage. The carrier frequency shall not depart from the nominal frequency in excess of the values specified for the equipment's frequency band:

Frequency Band (MHz)	Channel Bandwidth (kHz)	Frequency Stability (ppm)
406.1-430 and 450-470	12.5	± 2.5
	25.0	± 5

The test was performed with unmodulated carrier at maximum power level.

Test results. channel width 12.5 kHz
Table 9: Frequency stability (normal temperature)

Transient frequency behaviour

Standard: ANSI C63.26-2015
Tested by: PKA
Date: 29 July 2022
Temperature: 23 ± 3 °C
Humidity: 20 - 75 % RH
Barometric pressure: 860 - 1060 hPa
Test result: **PASS**

FCC Rule: §90.214
RSS-119 5.9

When a transmitter is turned on or off, the radio frequency may take some time to stabilize. During this initial period, the frequency error or frequency difference (i.e., between the instantaneous and the steady state frequencies) shall not exceed the limits specified for the equipment's frequency band and channel bandwidth:

Channel Bandwidth (kHz)	Time Intervals	Maximum Frequency Difference (kHz)	Transient Duration Limit (ms)
12.5	t_1	±12.5	10
	t_2	±6.25	25
	t_3	±12.5	10
25	t_1	±25	10
	t_2	±12.5	25
	t_3	±25	10

- t_{on} is the instant when a 1 kHz test signal is completely suppressed, including any capture time due to phasing
- t_1 is the time period immediately following t_{on}
- t_2 is the time period immediately following t_1
- t_3 is the time period from the instant when the transmitter is turned off until t_{off}
- t_{off} is the instant when the 1 kHz test signal starts to rise

The test was performed with unmodulated carrier at maximum power level.

Test results

Frequency [MHz]	TX power [mW]	Ch. Width [kHz]	Result
406.6	35000	12.5	PASS
469.5	35000	12.5	PASS
406.6	35000	12.5	PASS
469.5	35000	12.5	PASS
