Overall Assessment Letter for Blue Tower TransPondIT
FCC id: MS8EM915CV1-120

I have reviewed the application and find it compliant
This is an application for a Limited Radio Module Approval only intended for Centron Hosts.

Please note the following:

1: Test Set up

A diagram of the test set-up is uploaded under that exhibit. A Photograph of the Test Set up is included in the Test Report.

2: Limited Modular Approval

While it is recognised that Modular approvals are normally to be tested on an extended board this particular module is designed to only function in specifically designed hosts. It was not practical to test this module on any extended. The Module was tested in a representative host.

3: RF Assessment

The power level of the equipment is 4×10^{-5} W and is thus categorically excluded from RF evaluation.

4: Labelling on Host Apparatus

The Module Approval is limited to Centron Hosts. The Client has demonstrated in the Labelling and External Photos (within Host) that the FCC id is always visible when the module is installed. Accordingly the requirement that they provide either an "Includes Radio Module FCC id xxx" label or installation instructions requiring such a label be produced by the integrator is nullified.

5: Internal and External Photos

Photos of the Module itself are included in the Internal Photos exhibits. Photos of the Module when installed in a representative host are included in the external Photos exhibits. This seemed more practical then repeating the Modular photos as both internal and external photos, while demonstrating what a typical installed module would look like.

Yours sincerely

Hilton Carr
