A custom-built electronic device, likely a portable music player, is shown resting on a green grid surface. The device consists of a black printed circuit board (PCB) populated with various electronic components. On the left side, there is a USB Type-A port. In the center, a small, round, red button is mounted. To the right of the button, there is a small, rectangular, black component, possibly a display or a sensor. The PCB is populated with numerous surface-mount components, including resistors, capacitors, and integrated circuits. A small, white, rectangular component is visible on the right side of the board. The device is connected to a green USB cable, which is plugged into the USB port. The entire assembly is placed on a green surface with a white grid pattern.
