Requesting permissive change

To Whom It May Concern:

The purpose of this letter is to request a Class II Permissive change for  
FCC ID: MSQ-MT7925B22M, Original grant date: April 22, 2026

The major change filed under this application is :

1. Enabling TAS function via software.

The device has undergone a C2PC to establish portable category SAR conditions for the ASUS models P5605CAA and V5605CAA. The grant date is described above. In this application, the host device enables the TAS (Time-Averaged SAR) function and applies the C2PC (Module model number: MT7925B22M). The host models P5605CAA and V5605CAA have no differences except for marketing segmentation.

2. The security mechanism according to Section II of KDB 594280 D02 remains unchanged from what was reported to the FCC at the time of initial certification.
3. This host uses Mediatek Inc.'s WLAN Time-Averaged Tech 1.0WL technology. The DUT has been configured with the Mediatek Inc. WLAN Time-Averaged Tech 1.0WL parameters for testing, as described in the test report. For detailed TAS implementation, please refer to the TAS operation description provided by the module vendor in the document Mediatek\_WiFi\_BT\_TA\_SAR\_PD\_test\_proposal\_V2.pdf.
4. The antenna information and antenna locations have not changed. They are the same as in the original filing.

Sincerely,

(Signature)
