FCC

SUBJECT: FUJITSU PC CORPORATION

FCC ID:MU7FPCWL01

To Whom It May Concern:

This EUT is a PCMCIA Card that is used in a pin computer and will always be more than 20cm from any user. The first page of the test report says that the power output is 97milliwatts, this is an error. The correct power is 6.7milli Watts.

The report and the exhibits are some what fragmented because that is the way we received it.

This EUT is a "Blue Tooth" product and we are told that it is compliant with this requirement. It has 79 hopping channels with a 20dB bandwidth of 325kHz. The EUT has a dwell time of 152milli seconds.

Sincerely,

Sid Sanders
