

Technical Description

Model: ARKON SP191

The L&R input signal inject to ALC input, After ALC circuit disposal output to the 15.625KHz LPF, later the signal enter to the stereo modulation IC, and with pilot signal mix complex stereo signal and then output to the UHF MODULE. This complex stereo signal was modulated and transmits by the antenna. In this circuit should be including AUTO POWER control.

FCC ID: MVASP191-001T
