Re **Confidentiality Request for : AdaptaSite™ Translating Repeater**
FCC ID MZKADS3000-1ABC

The reason AirNet requests that photographs showing module interiors and the installation manual to be held confidential is to try to and prevent our competition from gaining access to this data. AirNets' products represent a significant technological leap from existing state of the art wireless infrastructure and interest from competitors is, understandably, keen. We wish to protect our intellectual property as much as possible.

Our customers are under Non-Disclosure agreements with AirNet. This prevents them from distributing photographs of the equipment. Certain components, such as the amplifiers, have their warranty voided if anyone unauthorized removes the cover. This also discourages the user from opening these modules and photographing them.

As to the installation manual, only AirNet trained and qualified field-service personnel would typically have access to this data, as we normally are responsible for the installation of our products. The Non-disclosure agreements would also discourage unauthorized distribution of this material by AirNet's customers.

There seems to be some precedence for this type of request. Refer to Nokia application, FCC ID L7KTXU61. This application has the user's manual and interior photographs removed for confidentiality.

This request was also granted on AirNet MZKRE3010-1900.
