

Locks & Alarm

1 2467

Using the remote handset

While it is not necessary to point the handset at the vehicle, the handset must be within range of the vehicle when a button is pressed. Note that the operating range may vary depending upon handset battery condition and may sometimes be limited by physical and geographical factors beyond your control. From a security point of view, it may not be wise to unlock unless you are within a few feet of the vehicle.

NOTE: The handset complies with part 15 of the FCC rules. Operation is subject to the following two conditions.

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation. This applies to both alarm receivers and handset transmitter.

CAUTION: Any changes or modifications to the transmitter not expressly approved by the manufacturer could void the user's authority to operate the equipment.

Superlocking

Superlocking provides greater security by immobilising the interior door handles, thereby preventing an intruder from gaining entry by smashing a window and reaching inside the vehicle to operate the door handles. Provided all the doors are fully closed Superlocking is activated by pressing the handset lock button twice within one second, or turning the door lock to the lock position with the key twice within one second.
