CIRCUIT DESCRIPTION OF 39705

1. RF MODULE

1) RX PART

The receiver front-end contains a band pass filter, RF low noise amplifier, active transistor mixer, a monolithic crystal filter and 10.7MHz "IF" amplifier.

This front-end receives THE RF signal from the antenna. And RF signals frequency range is 902.1~ 903.575MHz for Handset and 926.1~ 927.575MHz for Base unit pass through RF AMP (Q1, Q8).

After passing through the band pass filter, the signal is mixed with 1'st local frequency from voltage controlled oscillator. The signal is amplified on the IF AMP transistor (Q10) and the signal pass through the monolithic crystal filter (10.7MHz) after the IF signal pass the MCF filter, the signal enter by the FM IF (intermediate frequency) IC. And the signal is mixed in the FM IF IC (MC3361). The signal pass through the ceramic filter (450KHz). The output signal in the FM IF IC streams from the AF-OUT terminal of the connector.

2) TX PART

The signal is made to the portable, enter by the AF-IN terminal of the connector.

The signal send the MOD terminal of the TX VCO.

The signal is mixed in the TX VCO mixing the RF signal, the RF signal adjust by the VCI

The RF signal enter by the transmission power AMP transistor (Q3)

Enter by the band pass filter.

The RF signal pass through the band pass filter, towards the ANT. The last transmission RF signal is 926.1~ 927.575MHz for Handset and 902.1~ 903.575MHz for Base Unit.

2. HAND SET MAIN

The demodulated signal, resulting from Double Super Heterodyne system, which appears at output Pin no.10 of CN2 is connected to Pin no.16 of IC2. The audio output from Pin no.19 is finally amplified by Q3 and a.c coupled to the receiver unit the HAC compatibility.

The demodulated data code from Pin no.10 of CN2 is fed to Q12, Q11 and it is connected to (DATA IN) Pin no.79 of IC4.

上海紫贝电讯电子有限公司

Voice signal from C-MIC is coupled to Pin no.8 of IC2. The voice signal is compressed by IC2 & output Pin no.1 is connected to Pin no.2 of CN2 for modulation.

Pin no.57 of IC4 is the output port for data code that should be transmitted to the base unit.
This data code is connected to the Pin no.2 of CN2 for modulation.

LCD display operation is monitored by Pin no.1~34, 62-77, 95-100 of IC1.

During the charging, it is detected by Pin no 52 of IC4.

Key board operation is monitored by Pin no.82~89 of IC4.

Key Tone and the ringing from Pin no.92 of IC4 drives the BUZZER.

1. BASE MAIN

The demodulated signal from Pin no.10 of CN2 is sent to IC 102A Pin no.16 to expansion. The expanded signal amplitude by Q101 and Q102 and sent to the telephone line via hybrid transformer HYB101.

The demodulated data code from Pin no.10 of CN2 is fed o IC101 and it is connected Pin no.30 of IC103.

The audio signal from the telephone line connected Pin no.2 of CN2 through IC102 to compression before modulation.

Stand-by mode FSK for caller ID received by IC106 C and D and this signal sent to Pin no 6 of IC104 to cover to Digital and send it to IC103 Pin no.1.
CAS detected by IC104 Via IC106 A and B.

Relay controlling is done by Pin no.13 of IC103

Ring signal monitored by IC107 (PHOTO COUPLER IC) is detected by Pin no.14 of IC103 resulting a data code to the handset.

DTMF dialing is generated by IC103 Pin no.34 this signal output through the base of Q101 to tel-line

When the handset is placed on the base cradle, the charging is detected by Pin no.35 of IC103 sends data codes to handset for security code setting.

The power to the bass unit is supplied by IC105(5V REGULATOR IC).

F, FREQUENCY CHART
