

Electromagnetic Compatibility Test Report

Tested to FCC Part 15, Subpart C and RSS-210 Issue 9

On

Active RFID

OMNI-P60 & OMNI-P65

**1200 Ridgeway Avenue
Rochester NY 14615 USA**

Prepared by:

TUV Rheinland of North America, Inc.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

Report No.:

31652586.003

Manufacturer's statement - attestation

The manufacturer; OMNI-ID, as the responsible party for the equipment tested, hereby affirms:

- a) That he has reviewed and concurs that the test shown in this report are reflective of the operational characteristics of the device for which certification is sought;
- b) That the device in this test report will be representative of production units;
- c) That all changes (in hardware and software/firmware) to the subject device will be reviewed.
- d) That any changes impacting the attributes, functionality or operational characteristics documented in this report will be communicated to the body responsible for approving (certifying) the subject equipment.

Ed Nabrotzky

1 General Information

1.1 Scope

This report is intended to document the status of conformance with the requirements of the standard(s), based on the results of testing performed on 19 August 2016 on the Active RFID, Model No. OMNI-P60 & OMNI-P65, manufactured by OMNI-ID. This report only applies to the specific samples tested under the stated test conditions. It is the responsibility of the manufacturer to assure that additional production units of this model are manufactured with identical or EMI equivalent electrical and mechanical components. This report is further intended to document changes and modifications to the EUT throughout its life cycle. All documentation will be included as a supplement.

1.2 Purpose

Testing was performed to evaluate the EMC performance of the EUT (Equipment Under Test) in accordance with the applicable requirements, procedures, and criteria defined in the application of regulations and application of standards listed in this report.

1.3 Revision History

Revision	Date	Description of Revision
- -	11 Oct 2016	Initial Release
1	31 Oct 2016	Corrected typos
2	8 Dec 2016	Corrected typos in subpart references.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

1.1 Summary of Test Results

Applicant	OMNI-ID 1200 Ridgeway Avenue Rochester NY 14615 USA	Tel	(585) 713-1007	Contact	Ed Nabrotzky
		Fax		e-mail	ed.nabrotzky@omni-id.com
Description	Active RFID	Model	OMNI-P60 & OMNI-P65		
Serial Number	Production Prototypes	Test Voltage/Freq.	3 V DC Lithium Metal battery		
Test Date Completed:	19 August 2016	Test Engineer	Mark Ryan		
Standards	Description	Severity Level or Limit		Worst-case Values	Test Result
FCC Part 15, Subpart C Standard	Radio Frequency Devices-Subpart C: Intentional Radiators	See called out parts below		See Below	Complies
RSS-210 Issue 9 Standard	Low-Power Licence-exempt Radiocommunication Devices Category I Equipment	See called out parts below		See Below	Complies
FCC Part 15.231 and RSS-210 Annex A	Periodic operation in the band 40.66-40.70MHz and above 70 MHz.	See called out parts below		See Below	Complies
FCC Part 15.231(b) and RSS-210 A.1.2(a)	Radiated Output Power for Fundamental and Harmonic Frequencies	Fund: Shall not exceed 11 mV/m (80.83 dB μ V/m) at 3m Harmonics: Shall not exceed 1100 μ V/m (60.83 dB μ V/m) at 3m, (in unrestricted bands)		79.84 dB μ V /m All harmonics are below the restricted-band limits	Complies
FCC Parts 15.231(b), 15.209, RSS-210 A.1.2(b) and RSS-GEN A1.1	Out-of-Band Spurious Emissions and Band Edges (EUT in Transmit Mode)	Below the applicable limits		46.72 dB μ V/m	Complies
FCC part 15.231(a)(3) and RSS-210 A.1.1(c)	Type of Momentary Signal	Total transmission time shall not exceed two seconds per hour		1.44 seco /h r.	Complies
FCC Part 15.207(a) and RSS-GEN 7.2.4	Conducted Emissions on AC Mains	NA, The EUT is battery operated only		NA	NA
FCC Part 15.231(c) and RSS-210 A.1.3	Occupied Bandwidth	20 dB BW $\leq$ 0.5% of center freq. 99% BW $\leq$ 0.5% of center freq.		505.01 kHz 415.23 kHz	Complies

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

2 Laboratory Information

2.1 Accreditations

2.1.1 US Federal Communications Commission

TUV Rheinland of North America located at 762 Park Avenue, Youngsville, NC 27596-9470 is accredited by the commission for performing testing services for the general public on a fee basis. This laboratory test facilities have been fully described in reports submitted to and accepted by the FCC (Registration No 90552 and 100881). The laboratory scope of accreditation includes: Title 47 CFR Part 15, and 18. The accreditation is updated every 3 years.

2.1.2 ILAC / A2LA

The laboratory has been assessed and accredited by A2LA in accordance with ISO Standard 17025:2005 (Certificate Number: 3331.05, Master Code: 134288). The scope of laboratory accreditation includes emission and immunity testing. The accreditation is updated annually.

2.1.3 Innovation, Science and Economic Development Canada

Registration No.: 2932H-1 The OATS has been accepted by ISED to perform testing to 3 and to 10 meters, based on the test procedures described in ANSI C63.4:2014.

Registration No.: 2932H-2 The 5 meter chamber has been accepted by ISED to perform testing to 3 meters, based on the test procedures described in ANSI C63.4:2014.

2.1.4 Japan – VCCI

The Voluntary Control Council for Interference by Information Technology Equipment (VCCI) is a group that consists of Information Technology Equipment (ITE) manufacturers and EMC test laboratories. The purpose of the Council is to take voluntary control measures against electromagnetic interference from Information Technology Equipment, and thereby contribute to the development of a socially beneficial and responsible state of affairs in the realm of Information Technology Equipment in Japan. TUV Rheinland at the 762 Park Ave. Youngsville, N.C 27596 address has been assessed and approved in accordance with the Regulations for Voluntary Control Measures. (Laboratory Registration No: A-0034).

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

Report No.:**31652586.003**

Page 8 of 32

2.1.5 Sample Calculation – radiated & conducted emissions

The field strength is calculated by subtracting the Amplifier Gain and adding the Cable Loss and Antenna Correction Factor to the measured reading. The basic equation is as follows:

$$\text{Field Strength (dB}\mu\text{V/m)} = \text{RAW} - \text{AMP} + \text{CBL} + \text{ACF}$$

Where: RAW = Measured level before correction (dB μ V)

AMP = Amplifier Gain (dB)

CBL = Cable Loss (dB)

ACF = Antenna Correction Factor (dB/m)

$$\mu\text{V/m} = 10^{\frac{\text{dB}\mu\text{V / m}}{20}}$$

Sample radiated emissions calculation @ 30 MHz

Measurement +Antenna Factor–Amplifier Gain+Cable loss=Radiated Emissions (dB μ V/m)

$$25 \text{ dB}\mu\text{V/m} + 17.5 \text{ dB} - 20 \text{ dB} + 1.0 \text{ dB} = 23.5 \text{ dB}\mu\text{V/m}$$

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

2.3 Calibration Traceability

All measurement instrumentation is traceable to the National Institute of Standards and Technology (NIST). Measurement method complies with ANSI/NCSL Z540-1-1994 and ISO Standard 17025:2005. Equipment calibration records are kept on file at the test facility.

2.4 Measurement Equipment Used

Note: The test equipment used was calibrated in mid-August. There were no discrepancies issued from the previous calibration.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

3 Product Information

3.1 Product Description

The model is OMNI-P60 and OMNI-P65 tag is powered by a 3V Lithium Metal primary battery and is designed to tag materials and equipment in the industrial, oil & gas and manufacturing industries. The usage environments are industrial factories, warehouses and commercial locations. The transmitter will communicate with a gateway device to exchange presence and location information between the tag and the back end process control system.

The EUT operates on one channel of a thirteen channel band. Three sets of each the EUT were provided for testing; one each for the low medium and high frequencies used. Test samples of both modulations used by the EUT (OMNI and 802.15.4F protocols) were also supplied. The transmissions are non-periodic that will have less than 2 seconds of transmissions time per hour. Fresh batteries were installed.

The EUT model is available in two part numbers:

Model Table

Model	FCC-ID	Part Number	Protocol	-20dBc BW	UID
OMNI-P60	N74-OMNIP60	CP11564	OMNI	~ 270 kHz	D9AE1E00xxxxxxxx
OMNI-P65	N74-OMNIP60	CP11565	802.15.4F	~ 510 kHz	9C611D0200xxxxxx

OMNI-P60 & OMNI-P65

The hardware for CP11564 and CP11565 are identical. The only difference is the firmware loaded into the microcontroller to provide the **Proview** and **802.15.4F** protocols.

The Active tag operates with an internal 3.0 DC Lithium Metal battery only, on one of the thirteen channels from 433.272 to 434.568 MHz and transmits an average of once every 3 seconds, or when the button is pushed, for duration of 1.2ms or 1.3ms for button push. (See section 4.2 of this report).

3.2 Equipment Modifications

No modifications were needed to bring product into compliance.

3.3 Test Plan

The EUT product information, test configuration, mode of operation, test types, test procedures, test levels, pass/failure criteria, in this report were carried out per the product test plan located in appendix A of this report.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

4 Radiated Emissions in Transmit mode

4.1 Radiated emissions - FCC Parts 15.231, RSS-210 A1.1

The field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following limits:

Fundamental Frequency range: 260 to 470 MHz – 3750 to 12500 mV/m (Linear interpolation) at 3m.

Harmonic Frequencies: 375 to 1250 μ V/m (Linear interpolation) at 3m.

Spurious Emissions: To the limits of FCC Part 15.209 and RSS-GEN 7.2.1.

4.1.1 Over View of Test

Results	Complies (as tested per this report)					Date	9 August 2016	
Standard	FCC Parts 15.205, 15.209, 15.215(c), 15.231(b), RSS-210 A.1, and RSS-GEN							
Product Model	OMNI-P60 & OMNI-P65				Serial#	Production Prototypes		
Test Set-up	Tested in a 5m Semi Anechoic chamber, placed on a non-conductive foam table.							
EUT Powered By	3.0 V DC Lithium Metal battery	Temp	77° F	Humidity	42%	Pressure	1005 mbar	
Perf. Criteria	(Below Limit)			Perf. Verification		Readings Under Limit		
Mod. to EUT	None			Test Performed By		Mark Ryan		

4.1.2 Test Procedure

Testing was performed in accordance with 47 CFR Part 15, ANSI C63.10:2013, RSS-GEN Issue 4. These test methods are listed under the laboratory's A2LA Scope of Accreditation. This test measures the levels emanating from the EUT, thus evaluating the potential for the EUT to cause radio frequency interference to other electronic devices.

4.1.3 Deviations

Since all emissions outside the band are within the limits of FCC Part 15.209 and RSS-GEN 7.2.1, the emissions shown below are also compliant with FCC Parts 15.205, 15.209, 15.215(c), 15.231(b), RSS-210 A1, and RSS-GEN 7.2.1.

4.1.4 Test Setup Block Diagram

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

433.88	V	1.9	279	51.36	0	2.39	20.9	74.65	100.83	-26.18

Spec Margin = E-Field Value - Limit, E-Field Value = FIM Value - Amp Gain + Cable Loss + ANT Factor

Notes: **GREEN = Average Detector**, **Blue = Peak Detector**

The Limit using the Peak Detector is 20dB higher than the Average Detector limit.

The Spec limit has been converted from $\mu\text{V/m}$ to $\text{dB}\mu\text{V/m}$ for this table.

All other data is on file at TUV Rheinland.

This **highlighted** frequency and orientation was Highest Emission (Orientation C).

4.1.5.2 Maximum Time-weighted Emission:

The firmware of the EUT was modified to transmit continuously at 100% Duty cycle. This is considered to be the worst-case scenario.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA.

Report No.:

4.2 Conducted Emissions on AC Mains – FCC 15.207(a) and RSS-GEN 7.2.4

This test measures the electromagnet levels of spurious signals generated by the EUT on the AC power line that may affect the performance of other nearby electronic equipment.

4.2.1 Over View of Test

Results	NA EUT is battery operated only				Date	NA	
Standard	FCC Part 15.207(a) and RSS-GEN 7.2.4						
Product Model	OMNI-P60 & OMNI-P65			Serial#	NA		
Test Set-up	Tested in shielded room. EUT placed on table, see test plans for details						
EUT Powered By	3.0 V DC Lithium Metal battery	Temp	NA	Humidity	NA	Pressure	NA
Frequency Range	NA						
Perf. Criteria	(Below Limit)	Perf. Verification		Readings Under Limit for L1 & Neutral			
Mod. to EUT	None	Test Performed By		NA			

4.2.2 Test Procedure

Conducted emissions tests were performed using the procedures of ANSI C64.4: 2014, including methods for signal maximizations and EUT configuration. The photos included with the report show the EUT in its maximized configuration.

4.2.3 Deviations

The Test sample is battery operated only. It does not have provision for external power of any kind.

4.2.4 Final Test

This test is not applicable for the device submitted for testing.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. 31652586.003

Page 23 of 32

4.3 Periodic operation – FCC 15.231(a)(3) and RSS-210 A1.1.1

The EUT utilizes a non-predetermined interval of transmissions that averages a 1.2 ms burst every three seconds. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

4.3.1 Over View of Test

Results	Complies EUT is battery operated only					Date	10 August 2016	
Standard	FCC part 15.231(a)(3) and RSS-210 A.1.1(c)							
Product Model	OMNI-P60 & OMNI-P65				Serial#	Production Prototypes		
Test Set-up	Tested in shielded room. EUT placed on table, see test plans for details							
EUT Powered By	3.0 V DC Lithium Metal battery	Temp	75° F	Humidity	40%	Pressure	1000 mbar	
Frequency Range	150 kHz – 30 MHz							
Perf. Criteria	(Below Limit)		Perf. Verification		Readings Under Limit for L1 & Neutral			
Mod. to EUT	None		Test Performed By		Mark Ryan			

4.3.2 Test Procedure

Measure the number of pulses in a one minute period. Measure the pulse width of the transmission. Multiply: number of pulses/minutes * 60 minutes * pulse width. The product must be less than 2 seconds.

4.3.3 Deviations

The Test sample is battery operated only. It does not have provision for external power of any kind.

4.3.4 Final Test

The low/mid/high frequencies with both modulations show similar results.

All plots are on file at TUV Rheinland.

Number of Pulses/hour = 20 pulses per minute * 60 minutes = 1200 pulses per hour.

1200 pulses * 1.2 ms/ pulse = 1440 ms / hour or 1.44 seconds per hour.

When the ID button on the EUT is pushed a one-time 1.3 ms pulse will be sent on the next transmission.

Note: The ID button on the EUT would have to be pushed at least 430 times in one hour before it would become non-compliant with the rules of this section.

4.4 20dB Bandwidth

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. The Bandwidth is determined at the points 20dB down from the modulated carrier. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. This device operates below 900 MHz.

Perf. Criteria	(Below Limit)		Perf. Verification			Readings Under Limit		
Mod. to EUT	None		Test Performed By			Mark Ryan		

4.4.2 Test Procedure

For the purpose of part 15.231(c), the -20dB bandwidth shall be no wider than .25% of the center frequency for devices operating between 70 MHz to 900 MHz.

4.4.3 Deviations

The firmware of the EUT can utilize two different types of modulations. The 802.15.4F protocol modulation was chosen (worst case) as it is about twice the bandwidth of the OMNI Protocol (269kHz - 20dBc BW). Otherwise, there were no deviations from the test methodology.

The plot(s) for the -20dBc Bandwidths are on file at TUV Rheinland.

4.4.4 Final Results

The measured -20dB bandwidth is 511.42 kHz, which is well below the 1.083 MHz limit.

The EUT is compliant with the standards.

Frequency (MHz)	-20dB BW (kHz)	Limit (kHz)	Margin (kHz)	Modulation used	Part Number #
433.27	505.01	1083.18	-578.17	802.15.4F	CP11565
433.92	272.55	1084.80	-812.25	OMNI	CP11564
434.58	436.07	1086.45	-650.38	802.15.4F	CP11565

-20dBc Bandwidth.

4.4.5 Final Data

Figure 4 – The -20dB Bandwidth (802.15.4F Protocol) = 511.12 kHz. The Worst-Case is shown.

Span = 800 kHz, RBW = 30 kHz (4% of Span), VBW = 100 kHz ($\geq 3 \times$ RBW)

Note; no correction factors were applied to plot as this is only a BW measurement.

The EUT is compliant to the requirements of FCC Part 15.231(c).

4.5 99% Power Bandwidth

For the purpose of Section A1.1, the 99% bandwidth shall be no wider than .25% of the center frequency for devices operating between 70-900MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. This device operates below 900 MHz.

4.5.1 Test Over View

Results	Complies (as tested per this report)					Date	1 February 2016	
Standard	RSS-210 Section A.1.3							
Product Model	OMNI-P60 & OMNI-P65				Serial#	Production Prototypes		
Test Set-up	Direct Measurement from antenna port							
EUT Powered By	3 V DC Lithium Metal battery	Temp	73° F	Humidity	35%	Pressure	998 mbar	
Perf. Criteria	(Below Limit)			Perf. Verification		Readings Under Limit		
Mod. to EUT	None			Test Performed By		Mark Ryan		

4.5.2 Test Procedure

For the purpose of Section A1.1, the 99% bandwidth shall be no wider that 0.25% of the center frequency for devices operating between 70 MHz and 900 MHz.

4.5.3 Deviations

The firmware of the EUT can utilize two different types of modulations. The 802.15.4F protocol modulation was chosen (worst case) as it is about twice the bandwidth of the OMNI Protocol (237 kHz 99% BW). Otherwise, there were no deviations from the test methodology.

The plot(s) for the 99% Bandwidths are on file at TUV Rheinland.

4.5.4 Final Results

The measured 99% bandwidth is 1083.18 kHz, which is well below the 1.083 MHz limit.

The EUT is compliant with the standards.

Freq. (MHz)	Meas BW (kHz)	BW Limit (kHz)	Margin (kHz)	Modulation used	Model of EUT
433.27	415.23	1083.18	-667.95	802.15.4F	CP11565
433.92	238.88	1084.80	-845.92	OMNI	CP11564
434.58	410.42	1086.45	-676.03	802.15.4F	CP11565

99% Bandwidth.
