Revision 1.1

Operational Manual

- 1 IMTS attachment and operation.
- 2 ATS attachment and operation.

Individual Monitoring and Tracking System (IMTS)

The IMTS designed by Sovereign Technologies Corporation provides a very affordable and accurate tracking system for locating and position personnel within localized facilities. The attachment of the IMTS unit to an individual is performed in the following steps:

1. Open the packaging container and remove the IMTS transmitter and Snap Strap Assembly.
2. Orient the snap strap assembly to the transmitter unit the strap snap assembly is polarized for connection in only one direction.
3. Firmly snap both pieces together until here a click sound.
4. Attach the IMTS to an individual by orienting the transmitter assembly to the individual and passing the strap around the individual through the strap guide on the housing base and sliding the strap through the locking mechanism.

Tighten the strap assembly by applying pressure to the loose end of the strap assembly. The strap will tighten through the locking mechanism (DO NOT OVER TIGHTEN THE STRAP. OVER TIGHTENING THE STRAP WILL CAUSE THE STRAP TO SEPARATE CAUSING AN EMERGENCY CONDITION TO BE ACTIVATED.)

5. Once the IMTS is secured to an individual, verify operation of the system by moving the IMTS transmitter either up or down, or side to side, and verify the data on the computer. For details on computer operation, reference PalTrack installation manual.

Notice: The changes or modifications not expressly by the party responsible for compliance could void the user's authority to operate the equipment.

Model: 11201-1197

FCC ID: N8T SOV222

THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES.

OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS.(1)

THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE AND (2)

THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED,

INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRE

OPERATION.

Asset Tracking System (ATS)

The ATS designed by Sovereign Technologies Corporation provides a very affordable and accurate tracking system for locating and position asset and product within localized facilities. The attachment of the ATS unit to an asset or product is performed in the following steps:

Adhesive side

Activation Pin

1. Open the packaging and remove the ATS transmitter.
2. Attach the ATS to an asset or product by orienting the transmitter assembly to the asset or product so that the adhesive side of the transmitter is facing towards object.
3. Remove the protective adhesive paper from the ATS transmitter.
4. Orient the ATS to the desired location on the asset or product, and press the ATS FIRMLY to the asset or product.
5. DO NOT TRY TO RELOCATE OR REMOVE THE ATS FROM THE ATTACHED ITEM.
6. IF THE ATS IS REMOVED FROM THE Asset, it will be set to alarm mode.
7. Once the ATS is secured to and asset or product, verify operation of the system by moving the ATS transmitter either up or down, or side to side, and verify the data on the computer. For details on computer operation, reference PalTrack installation manual.
