Telefax: +31 594 504804

E-mail: info@eps.tno.nl

Test specification(s): 47 CFR Part 15 (2003-12-08)
Description of EUT: Inductive proximity card reader
Manufacturer: Cross Point B.V.
Brand mark: Cross Point
Model: XM13.56
FCC ID: N9G-XM1356

MEASUREMENT/TECHNICAL REPORT

Cross Point B.V.

Model : XM13.56

FCC ID: N9G-XM1356

April 26, 2004

This report concerns:	Original grant/certification	Class 2 change	Verification
Equipment type:	Inductive proximity card reader system for use with RF-ID tags operating on 13.56 MHz		
Deferred grant requested per 47 CFR 0.457(d)(1)(ii) ?	Yes	No	n.a.
Report prepared by:	Name	: H.J. Pieters	
	Company name	: TNO Electronic Products & Services (EPS) B.V.	
	Address	: Smidshornerweg 18	
	Postal code/city	: 9822 ZG Niekerk	
	Mailing address	: P.O. Box 15	
	Postal code/city	: 9822 TL Niekerk	
	Country	: The Netherlands	
	Telephone number	: + 31 594 505 005	
	Telefax number	: + 31 594 504 804	
	E-mail	: info@eps.tno.nl	

The data taken for this test and report herein was done in accordance with 47 CFR Part 15 and the measurement procedures of ANSI C63.4-1992. TNO Electronic Products & Services (EPS) B.V. at Niekerk, The Netherlands, certifies that the data is accurate and contains a true representation of the emission profile of the Equipment Under Test (EUT) on the date of the test as noted in the test report. I have reviewed the test report and find it to be an accurate description of the test(s) performed and the EUT so tested.

Date: April 26, 2004

1 General information.

1.1 Product description.

1.1.1 Introduction.

The inductive proximity card reader, brand Cross Point, model XM13.56, is designed to function as a security measure in order to prevent unauthorized access to buildings (or parts of buildings). A person who wants to enter a secure building, or a secure area in the building, must have a key card in which a valid access code is stored. When the key card is in close proximity of the card reader the code will be transmitted and validated by a computer system which is connected to the reader itself. Access will be granted to the secure area if it is determined that a valid code has been transmitted.

1.1.2 Choice of operating frequency.

The operating frequency of the inductive proximity card reader, brand Cross Point, model XM13.56 is 13.56 MHz (continuous carrier).

1.1.3 Operating principles.

The inductive proximity card reader is a DC powered system with an integral antenna. The inductive proximity card reader generates a RF-field at a frequency of 13.56 MHz (continuous carrier) which activates the electronics in the key card. The activated key card then sends an identification code to the inductive proximity card reader by modulating the RF-field. The modulation of the 13.56 MHz RF-field can be detected and then the code is demodulated by the inductive proximity card reader. The code is then transmitted by a wired connection to the computer system for validation.

1.2 Related submittal(s) and/or Grant(s).

Not applicable.

1.3 Tested system details.

Details and an overview of the system and all of its components, as it has been tested, may be found in table 1 below. FCC ID's are stated in this overview where applicable. The EUT is listed in the first row of table 1.

Description	Manufacturer	Model number	Serial number	FCC ID	Cable descriptions
Access control system	Cross Point B.V.	XM13.56	n.a.	N9G-XM1356	Unshielded +12 VDC power cable having a length of < 3 meters.

Table 1 - Tested system details overview.

Test specification(s): 47 CFR Part 15 (2003-12-08)
Description of EUT: Inductive proximity card reader
Manufacturer: Cross Point B.V.
Brand mark: Cross Point
Model: XM13.56
FCC ID: N9G-XM1356

1.4 Test methodology.

The test methodology used is based on the requirements of 47 CFR Part 15 (2003-12-08), sections 15.207, 15.205, 15.209 and 15.225.

The test methods, which have been used, are based on ANSI C63.4: 1992.

Radiated emission tests above 30 MHz were performed at a measurement distance of 3 meters. Below 30 MHz the radiated emission tests were carried out at measurement distances of 3 and 10 meters. The test results regarding the radiated emission tests on frequencies below 30 MHz have been extrapolated in order to determine the field strength of the measured values at measurement distances of 30 and 300 meters (as required by 47 CFR Part 15).

The receivers are switching automatically to the right bandwidth in accordance with CISPR 16. This is implemented in the receiver. The antenna factors are programmed in the test receiver. The receiver automatically calculates the appropriate correction factor for the utilized antenna and also the appropriate antenna factor for the cable loss. The total correction is automatically added to the measured value.

1.5 Test facility.

The Federal Communications Commission has reviewed the technical characteristics of the test facilities at TNO Electronic Products & Services (EPS) B.V., located in Nieuwerkerk, 9822 TL Smidshornerweg 18, The Netherlands, and has found these test facilities to be in compliance with the requirements of 47 CFR Part 15, section 2.948, per October 23, 2000.

The description of the test facilities has been filed at the Office of the Federal Communications Commission under registration number 90828. The facility has been added to the list of laboratories performing these test services for the public on a fee basis.

The list of all public test facilities is available on the Internet at <http://www.fcc.gov>.

1.6 Product labeling.

In accordance with 47 CFR Part 15.19 (a)(3) the following text shall be placed on a label, which is attached to the EUT:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

In accordance with 47 CFR Part 2.925 (a)(1), the FCC ID shall be placed on a label, which is attached to the EUT.

For further details about the labeling requirements (size, legibility, etc.) as set by the Federal Communications Commission see 47 CFR Part 15.19 (a)(3), 47 CFR Part 15.19 (b)(2), 47 CFR Part 15.19 (b)(4), 47 CFR Part 2.925 and 47 CFR Part 2.926.

2 System test configuration.

2.1 Justification.

The system was configured for testing in a typical fashion (as a customer would normally use it). During all tests the EUT was set up to function in accordance with the manufacturer's instructions.

The justification and manipulation of cables and equipment in order to simulate a worst-case behaviour of the test setup has been carried out as prescribed in ANSI C63.4: 1992.

2.2 EUT mode of operation.

Radiated and conducted emission measurements were carried out when the system was active and was generating a continuous transmitting signal.

2.3 Special accessories.

No special accessories are used and/or needed to achieve compliance with the appropriate sections of 47 CFR Part 15.

2.4 Equipment modifications.

No modifications have been made to the equipment in order to achieve compliance with the appropriate sections of 47 CFR Part 15.

2.5 Configuration of the tested system.

Unit title	:	Inductive proximity card reader
Model number	:	XM13.56
Part number	:	Not applicable
FCC ID	:	Not applicable
Frequency range	:	13.56 MHz (continuous carrier)
Description/details	:	See section 1.1 of this test report
Power supply	:	+12 Volts DC (Powered by external power supply)
Clock Oscillator(s)	:	8 MHz
Cabinet & Screening	:	Plastic
Interface Cable(s)	:	Shielded data/DC power cable
Method of screening	:	Not applicable
Method of grounding	:	Not applicable
Operating configuration	:	See section 1.3 of this test report

Test specification(s): 47 CFR Part 15 (2003-12-08)
Description of EUT: Inductive proximity card reader
Manufacturer: Cross Point B.V.
Brand mark: Cross Point
Model: XM13.56
FCC ID: N9G-XM1356

2.6 Block diagram of the EUT.

The block diagram is available in the technical documentation package as an addendum to this test report.

2.7 Schematics of the EUT.

The schematics are available in the technical documentation package as an addendum to this test report.

2.8 Partlist of the EUT.

The partlist is available in the technical documentation package as an addendum to this test report.

3 Radiated emission data.

3.1 Radiated field strength measurements (frequency range of 30-1000 MHz, E-field).

Frequency (MHz)	Measurement results dB(μ V)/m @ 3 metres Quasi-peak		Limits dB(μ V)/m @ 3 metres Quasi-peak	Margin (dB) Quasi-peak		Result
	Vertical	Horizontal		Vertical	Horizontal	
81.00	18.5	10.6	40.0	-21.5	-29.4	PASS
108.50	29.7	26.7	43.5	-13.8	-16.8	PASS
122.20	16.0	20.7	43.5	-27.5	-22.8	PASS
135.60	31.2	27.2	43.5	-12.3	-16.3	PASS
162.70	33.2	20.4	43.5	-10.3	-23.1	PASS
176.29	27.2	27.9	43.5	-16.3	-15.6	PASS
189.85	39.2	41.1	43.5	-4.3	-2.4	PASS
203.40	41.6	41.5	43.5	-1.9	-2.0	PASS
216.90	40.3	40.9	46.0	-5.7	-5.1	PASS
230.53	26.5	26.4	46.0	-19.5	-19.6	PASS
244.09	24.5	26.4	46.0	-21.5	-19.6	PASS
257.65	22.3	24.3	46.0	-23.7	-21.7	PASS

Table 2

The results of the radiated emission tests, carried out in accordance with 47 CFR Part 15, sections 15.205, 15.209 and 15.225 (a), with the EUT operating in continuous transmit mode on 13.56 MHz, are depicted in table 2.

Note: - Field strength values of radiated emissions at frequencies not listed in table 2 are more than 20 dB below the applicable limit.

3.2 Radiated field strength measurements (frequency range of 0.009-30 MHz, H-field).

Frequency (MHz)	Measurement results dB μ V Quasi-peak		Antenna factor dB	Cable loss dB	Measurement results dB(μ V)/m Quasi-peak	Limits Part 15.209 dB(μ V)/m (calculated)
	3 meters	10 meters				
0.009 - 0.490	<10.0	n.a.	19	1	<10.0	48.5 - 25.7 (300 m)
0.375 - 0.490	<10.0	n.a.	19	1	<10.0	16.1 - 13.8 (300 m)
0.490 - 1.705	<10.0	n.a.	19	1	<10.0	33.8 - 22.9 (30 m)
1.705 - 13.110	< 10.0	n.a.	19	1	<10.0	29.5 (30 m)
13.110 - 13.410	< 10.0	n.a.	19	1	< 10.0	40.5 (30 m)
13.410 - 13.553	< 10.0	n.a.	19	1	< 10.0	50.5 (30 m)
13.553 - 13.567	37.3	n.a.	19	1	< 10.0	84.0 (30 m)
13.567 - 13.710	< 10.0	n.a.	19	1	< 10.0	50.5 (30 m)
13.710 - 14.010	< 10.0	n.a.	19	1	< 10.0	40.5 (30 m)
14.010 - 30.00	< 10.0	n.a.	19	1	< 10.0	29.5 (30 m)

Table 3

The results of the radiated emission tests, carried out in accordance with 47 CFR Part 15, sections 15.205, 15.209 and 15.225 (a), with the EUT operating in continuous transmit mode on 13.56 MHz, are depicted in table 3.

- Notes:**
- A total work out of the calculated measurement result can be found in the Appendix 1.
 - Frequency range: 9-90 kHz Average detector used during measurements
110-490 kHz Average detector used during measurements
 - The radiated field strengths were measured at a distance of 3 and 10 meters. Measured field strengths at a distance of 3 meters were already below the limit of 30/300 meters
 - n.a. indicates that no field strength values could be measured on the listed frequencies or in the listed frequency range
 - Field strength values of radiated emissions at frequencies not listed in table 3 are more than 20 dB below the applicable limit

Table 4.

The results of the conducted emission tests, carried out in accordance with 47 CFR Part 15, section 15.207, at the 110 Volts AC mains connection terminals of the AC/DC power supply connected to the EUT and with the EUT operating in continuous transmit mode on 13.56 MHz, are depicted in table 4.

Note: During the measurement it was taken into account that the main operating frequency of 13.56 MHz of the EUT could be present on the 110 Volts AC mains connection terminals. The possible occurrence of this frequency of 13.56 MHz and its harmonics, throughout the range of 13.56 MHz to 30 MHz, was checked during the measurement. The conducted emissions on frequencies which are not listed in table 4 were found to be below 25 dB(μ V) on both line 1 and line 2.

5 Frequency tolerance of the carrier signal.

Temperature variation (°C)	Measurement results (MHz)	Limits (MHz)
-20 to +50	13.56078 - 13.56085	13.55949 - 13.56220

Table 5

The results of the measurements regarding the frequency tolerance of the carrier signal, carried out in accordance with 47 CFR Part 15, section 15.225 (c), with the EUT operating in continuous transmit mode on 13.56 MHz, are depicted in table 5. The measurements were carried out with the AC mains input voltage of the AC/DC adapter set to 110 Volts AC, which was determined to be the nominal value, while the ambient temperature was varied between -20 and +50 °C.

The nominal frequency was determined to be 13.56085 MHz. The limits in table 5 were determined by taking the maximum allowable tolerance of $\pm 0.01\%$ into account, with respect to the nominal frequency, as set forth in 47 CFR Part 15, section 15.225 (c).

Input voltage variation (%)	Measurement results (MHz)	Limits (MHz)
85 - 115	13.56085	13.55949 - 13.56220

Table 6

The results of the measurements regarding the frequency tolerance of the carrier signal, carried out in accordance with 47 CFR Part 15, section 15.225 (c), with the EUT operating in continuous transmit mode on 13.56 MHz, are depicted in table 6. The measurements were carried out at a nominal ambient temperature of +20 °C, while the AC mains input voltage of the AC/DC adapter was varied between 85% to 115% of the nominal AC mains input voltage of 110 Volts AC.

The nominal frequency was determined to be 13.56085 MHz. The limits in table 6 were determined by taking the maximum allowable tolerance of $\pm 0.01\%$ into account, with respect to the nominal frequency, as set forth in 47 CFR Part 15, section 15.225 (c).
