

MODEL: 217S54

Circuit description

This is a RF 433MHz thermometer remote sensor.

The unit shows the real temperature by sensor, also it is capable to transmit 433MHz signal to receiver through 433MHz transmitter circuit.

The unit can show the temperature unit in $^{\circ}\text{C}$ or $^{\circ}\text{F}$.

Press "Tx" key can transmit 433MHz signal at the moment.

The unit use 2 pcs AAA of 1.5V battery in-series connection. It gives 3V supply and it is a low power consumption design.
