INTERTEK TESTING SERVICES

EXHIBIT 1

GENERAL DESCRIPTION

INTERTEK TESTING SERVICES

1.0 General Description

1.1 Product Description

The Equipment Under Test (EUT) is a video recording transmitter which is a one-plug module on LAN and the Internet for remote video monitoring and recording. The EUT is powered by AC 100-240V 50-60Hz input, DC 12V output adaptor. It provides simultaneous remote monitoring, recording and playback. Users can keep track of live video and play back recorded video from any remote locations. It can support up to 16 video and alarm inputs and 4 relay switches. Also it has the features of password protection on connection and settings and built-in read time clock.

The Models bearing the following model numbers have the following difference:

<u>Model No.</u>	<u>Features</u>
VR-4021	Support 4 video channels, 4 alarm inputs, 4 output switches and 20G hard disk.
VR-4042	Support 4 video channels, 4 alarm inputs, 4 output switches and 40G hard disk.
VR-8042	Support 8 video channels, 8 alarm inputs, 4 output switches and 40G hard disk.
VF-8084	Support 8 video channels, 8 alarm inputs, 4 output switches and 80G hard disk.
VR-16084	Support 16 video channels, 16 alarm inputs, 4 output switches and 80G hard disk.
VR-16168	Support 16 video channels, 16 alarm inputs, 4 output switches and 160G hard disk.

The transmitter's features will be enabled by both software and hardware as indicated in block diagram and circuit diagram. The difference in these models is in the No. of encoder PCB, and necessary component but same PCB layout in main board with different capacity hard disk.

The VR-16168 is full component version with the highest capacity hard disk.

For electronic filing, the brief circuit description is saved a filename: descri.pdf.

1.2 Related Submittal(s) Grants

This is a single Application for Certification.

INTERTEK TESTING SERVICES

1.3 Test Methodology

Both AC mains line-conducted and radiated emission measurements were performed according to the procedures in ANSI C63.4 (1992). All measurements were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. For each scan, the procedure for maximizing emissions in Appendices D and E were followed. All Radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the "**Justification Section**" of this Application.

1.4 Test Facility

The open area test site and conducted measurement facility used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. This test facility and site measurement data have been fully placed on file with the FCC.

INTERTEK TESTING SERVICES

EXHIBIT 2

SYSTEM TEST CONFIGURATION

INTERTEK TESTING SERVICES

2.0 System Test Configuration

2.1 Justification

The system was configured for testing in a typical fashion (as a customer would normally use it), and in the confines as outlined in C63.4 (1992.)

The EUT was powered from AC 100-240V 50-60Hz input, DC 12V output adaptor.

For maximizing emissions, the EUT was rotated through 360°, the antenna height was varied from 1 meter to 4 meters above the ground plane, and the antenna polarization was changed. This step by step procedure for maximizing emissions led to the data reported in Exhibit 3.0.

The model VR-16168 is the full version and its test data is demonstrated on the report.

2.2 EUT Exercising Software

The EUT exercise program used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use. The software, contained in a CD ROM, was inserted into CD Drive and was installed into the hard disk.

Once the program was loaded, the cameras will capture images and the images will be shown on the monitor and recorded in the hard disk.

2.3 Special Accessories

Shielded cables are necessary for compliance of this product.

INTERTEK TESTING SERVICES

2.4 Equipment Modification

Any modifications installed previous to testing by Signal Communications Ltd. will be incorporated in each production model sold/leased in the United States.

No modifications were installed by Intertek Testing Services.

2.5 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered.

2.6 Support Equipment list & Description

- Refer List:
1. HP Computer: Model: D3397A
S/N: SG54500246
FCCID: K4UVECTRAVL5
 2. Hitachi Monitor: Model: CM643ET
 3. HP Mouse: Model: M-S34
S/N: LCA53438640
FCCID: DZL210582
 4. HP Printer: Model: C2642A
S/N: SG67B131RY

 5. CD-Rom: Model: CDU311
S/N: 5049187
FCCID: AK8CDU31110
 6. HP Keyboard: Model: E03633QLUS
FCCID: CIGEO3614
 7. NTSC Camera with 1.6m cable and adaptor
Input: AC 240V 50Hz 19VA
Output: DC 9V 1000mA
 8. Alarm Box
 9. 2 x RS232 mini tester
 10. 2 x 9 pins to 25 pins RS 232 converter
 11. 1 x shielded parallel cable with 1m long
 12. 1 x shielded RJ45 LAN cable with 3.4m long
 13. 4 x 8m shielded BNC cable with 75ohm terminator
 14. 11 x 3m shielded BNC cable with 75ohm terminator
 15. 1 x 3.5m shielded RS232 cable for alarm & SW
 16. 1 x 3m shielded modem cable
 17. 1 x 3m shielded RS232 cable for AUX
 18. Adaptor: Input: AC 100-240V 50-60Hz
Output: DC 12V 5.0A 60W
Model: UE60-120500SPA
 19. Software: Tele Eye III+

EXHIBIT 3

EMISSION RESULTS

INTERTEK TESTING SERVICES

3.0 Emission Results

Data included were result from worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs, data tables and graphical representations of the emissions are included.

INTERTEK TESTING SERVICES

3.1 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF - AG$$

where FS = Field Strength in dB μ V/m

RA = Receiver Amplitude (including preamplifier) in dB μ V

CF = Cable Attenuation Factor in dB

AF = Antenna Factor in dB

AG = Amplifier Gain in dB

In the following table(s), the reading shown on the data table reflects the preamplifier gain. An example for the calculations in the following table is as follows:

$$FS = RR + LF$$

where FS = Field Strength in dB μ V/m

RR = RA - AG in dB μ V

LF = CF + AF in dB

Assume a receiver reading of 52.0 dB μ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29 dB is subtracted, giving a field strength of 32 dB μ V/m. This value in dB μ V/m was converted to its corresponding level in μ V/m.

$$RA = 52.0 \text{ dB}\mu\text{V/m}$$

$$AF = 7.4 \text{ dB}$$

$$RR = 23.0 \text{ dB}\mu\text{V}$$

$$CF = 1.6 \text{ dB}$$

$$LF = 9.0 \text{ dB}$$

$$AG = 29.0 \text{ dB}$$

$$FS = RR + LF$$

$$FS = 23 + 9 = 32 \text{ dB}\mu\text{V/m}$$

$$\text{Level in mV/m} = \text{Common Antilogarithm} [(32 \text{ dB}\mu\text{V/m})/20] = 39.8 \mu\text{V/m}$$

H	350.001	32.7	14.9	16	31.6	46.0	-14.4
H	399.994	38.0	15.4	16	37.4	46.0	-8.6

- Notes:
1. Peak Detector Data unless otherwise stated.
 2. All measurements were made at 3 meter. Harmonic emissions not detected at the 3-meter distance were measured at 0.3-meter and an inverse proportional extrapolation was performed to compare the signal level to the 3-meter limit. No other harmonic emissions than those reported were detected at a test distance of 0.3-meter.
 3. Negative value in the margin column shows emission below limit.
 4. Interconnecting cabling or wiring was connected to one of each type of functional port of the EUT, and each cable or wire was terminated in a device typical of actual usage. Additional connecting cables or wires were added to the EUT to determine the effect these cables or wires had on emissions from the EUT. The number of additional cables or wires were limited to the condition where the addition of another cable or wire did not significantly affect the emission level, i.e. varies less than 2 dB, provided that the emission level remains compliant. These additional cables or wires need not be terminated.
