

Letter of Transmittal for ECH Series of Fluorescent Lamps (amended 11/12/99)

The change being requested is a broadening of the product line through addition of an additional series of lamps having different housings to accommodate specific applications. These lamps do not have a screw in base as the original submission, but pigtail wires that can be hard wired into a fixture or housing. The circuit boards have different physical configurations to fit the housings but contain the same components arranged in the same ways. There are no changes in the frequency determining and stabilizing circuits. The operating frequency of 0.045 mHz remains the same. The components vary in the same manner as those of the original grant and are shown in the various schematics. The emissions of individual lamps vary from those of the original submission and from each other, but all meet the requirements of the FCC Part 18 as shown in the test reports. Thus, this is believed to be a Class II permissive change.

S/ R. Edward Koskie, President, Compliance Labs Inc.

Addendum: The underlined sentence above is an addition to the original submission. During transmission of EA12508 attachments, I did not receive conformation of receipt. The transmission simply closed. I called Betty Traub about this but the FCC computers were down for upgrade. When I received an E-mail from Jaunice Green (correspondence ref: 10559) asking for a submission of the labels, I assumed all the other attachments had arrived. If there are any other discrepancies, I would be happy to rectify. Only one external photo is submitted since the appearance of each model is the same except for lamp diameter. The internal photos are identical for all models. The test setup photo is identical for all models.
