APPENDIX A: Test Sample Description: AL200
APPENDIX B: Receive Band Emissions for AL200

1.0 INTRODUCTION

1.1 SCOPE

The purpose of this report is to present the findings and results of compliance testing performed in accordance with CFR Title 47 FCC Part 15, Subpart C, Intentional Radiators.

1.2 APPLICANT

This test report has been prepared for CSI Wireless Inc., located in Calgary, Alberta, Canada.

1.3 APPLICABILITY

All test procedures, limits, and results defined in this document apply to the CSI Wireless Inc. AL200 unit, referred to herein as the Equipment Under Test (EUT).

The results contained in this report relate only to the item tested.

This report does not imply product endorsement by NVLAP or the Canadian or US governments.

1.4 TEST SAMPLE DESCRIPTION

The test sample provided for testing was a AL200:

Product Type:	Commercial Telecommunication
Model Number:	AL200
Serial Number:	49
Cables:	2x DC and 3x digital communications
Power Requirements:	8.0 V to 18 V dc (16 to 36 V dc)
Peripheral Equipment:	Cellcom CVDM program, Serial Ad.

The AL200 was tested with the GAP2 antenna from CSI Wireless Inc. More detailed information is provided by CSI Wireless Inc. in Appendix A.

1.5 GENERAL TEST CONDITIONS AND ASSUMPTIONS

The EUT was set up and exercised using the configurations, modes of operation and arrangements defined in this report only. All inputs and outputs to and from other equipment associated with the EUT were adequately simulated.

Where relevant, the EUT was only tested using the monitoring methods and test criteria defined in this report.

Environmental conditions are recorded for each test.

1.6 SCOPE OF TESTING

Testing was performed in accordance with FCC Part 15 Subpart C (2000), and ANSI C63.4 (1992).

1.6.1 VARIATIONS IN TEST METHODS

The following variations in test methodology were noted during testing: for Frequency Stability versus temperature, the data collected from previous test were used.

1.6.2 MARGINAL EMISSIONS MEASUREMENTS

As noted in Section 4, some emissions were measured to be within -6 dB of the specified limit.

1.6.3 TEST SAMPLE MODIFICATIONS

There were no equipment modifications during test performance.

2.0 ABBREVIATIONS

AP	-Average Peak
CE	-Conducted Emissions
E	-Field - Electric Field
H	-Field - Magnetic Field
N/T	-Not Tested
N/A	-Not Applicable
PK	-Peak
QP	-Quasi Peak
RE	-Radiated Emissions

3.0 MEASUREMENT UNCERTAINTY

For Radiated E-Field Emissions and Conducted Emissions, the uncertainties in the measurements were calculated using the methods outlined in the NAMAS document, NIS81: May 1984.

Frequency	= ± 1 kHz
Amplitude (RE)	= ± 4.01 dB
Amplitude (CE)	= ± 3.25 dB

4.0 TEST CONCLUSION

The EUT was subjected to the following tests. Compliance status is indicated as **PASS** or **FAIL**.

The following table summarizes the test results in terms of the specification and class or level applied, the unique test sample identification, the EUT modification state, and configuration as applicable.

TEST CASE	TEST TYPE	SPECIFICATION	TEST SAMPLE	MOD. STATE	CONFIGURATION	RESULT
§4.1	Conducted Emissions	FCC Part 15.207	AL200	nil	Simulated Installation	N/A
§4.2	Radiated Emissions including Restricted Bands of Operation	FCC Part 15.209 and 15.205 and 22.907	AL200	nil	Simulated Installation	PASS
§4.3	Occupied Bandwidth with modulationn	FCC Part 22.917 (b)(d)	AL200	nil	Simulated Installation	PASS
§4.4	Frequency Stability versus Temperature	FCC Part 22.355	AL200	nil	Simulated Installation	PASS
§4.5	Frequency Stability versus Voltage	FCC Part 22.355	AL200	nil	Simulated Installation	PASS
§4.6	Effective Radiated Power	FCC Part 22.913	AL200	nil	Simulated Installation	PASS
§4.7	Audio Filter Characteristics	FCC Part 22.915 (d)	AL200	nil	Simulated Installation	PASS
§4.8	Modulation Characteristics	FCC Part 22.915 (c)	AL200	nil	Simulated Installation	PASS
§4.9	Conducted Emissions at Antenna Port	FCC Part 22.917	AL200	nil	Simulated Installation	PASS
§4.10	Receive Band Emissions	FCC Part 22.917 (f)	AL200	nil	Simulated Installation	PASS
§4.11	Effective Radiated Power of Spurious Emissions	FCC Part 22.913	AL200	nil	Simulated Installation	PASS

STATEMENT OF COMPLIANCE

The client equipment referred to in this report was found to comply with the requirements as stated above.

4.1 CONDUCTED EMISSIONS ON AC POWER LINES

Test Lab: Electronics Test Centre (Airdrie)			Product:						
Test Personnel:			AL200						
Test Date: N/A									
Test Result, AL200: N/A									
Objectives/Criteria			Specifications						
The Conducted emissions produced by a system or sub-system shall not exceed the limits for the specifications as stated. Emission levels should meet the requirements with a margin of 6dB. The EUT was not assessed for Conducted Emissions because there is no direct connection to the AC mains.			FCC Part 15 Subpart B <table border="1"> <thead> <tr> <th>Frequency [MHz]</th> <th>Limit (QP) [dBμV]</th> </tr> </thead> <tbody> <tr> <td>0.45 – 30</td> <td>47.96</td> </tr> </tbody> </table>			Frequency [MHz]	Limit (QP) [dBμV]	0.45 – 30	47.96

N/A.									

4.2 RADIATED EMISSIONS INCLUDING RESTRICTED BANDS OF OPERATION

Test Lab: MPB Technologies Inc. Airdrie			Product:			
Test Personnel: Steven Tarkowski			AL200			
Test Date: 24, 27 & 29 November 2001						
Test Result, AL200: PASS						
Objectives/Criteria			Specifications			
The Radiated E-Field emissions produced by a system or sub-system, measured at a distance of 3m from the EUT, shall not exceed these limits <i>within the restricted bands of operation (RBOs)</i>. Any emissions lying outside the RBOs shall not exceed the level of the fundamental. Emission levels should meet the requirements with a margin of 6dB. Note: See the table on the next page for the RBOs of Part 15.205. 24 Nov 2001: Temperature = 21.0 °C Humidity = 28 % 27 Nov 2001: Temperature = 22.0 °C Humidity = 28 % 29 Nov 2001: Temperature = 21.0 °C Humidity = 28 %			FCC Part 15.209			
			Frequency		Limit (QP @ 3m)	
			[MHz]		[dBµV/m]	
			30 – 88		40.00	
			88 – 216		43.52	
			216 – 960		46.02	
			Above 960		53.98	
Transmit Mode (excluding the fundamentals and its harmonics) for all channels :						
Vertical:			Horizontal:			
f (MHz)	Field Strength (dBµV/m)	Delta (dB from limit)	f (MHz)	Field Strength (dBµV/m)	Delta (dB from limit)

4.4 FREQUENCY STABILITY VERSUS TEMPERATURE

Test Lab: MPB Technologies Inc. Airdrie Test Personnel: Erin Hails Test Date: 20 July 2001	Product: AL200
Test Result, AL200: PASS	
Objectives/Criteria 20 Jul 2001: Temperature = 23.0 °C Humidity = 28 %	Specifications FCC 22.355 Frequency tolerance +/- 2.5 ppm

The data below was collected from 20 July 2001 (refer to ETC project c05e2295).

Frequency Stability versus Temperature for channel 001:

Channel 001	Frequency 825.030 MHz		
Temperature	Measured	Difference	
[°C]	[Hz]	[Hz]	[ppm]
-30	825029550	-450	-0.55
-20	825029548	-452	-0.55
-10	825029428	-572	-0.69
0	825029488	-512	-0.62
10	825030038	38	0.05
20	825030090	90	0.11
30	825029954	-46	-0.06
40	825029950	-50	-0.06
50	825029852	-148	-0.18

Frequency Stability versus Temperature for channel 367:

Channel 367	Frequency 836.010 MHz		
Temperature	Measured	Difference	
[°C]	[Hz]	[Hz]	[ppm]
-30	836009618	-382	-0.46
-20	836009492	-508	-0.61
-10	836009370	-630	-0.75
0	836009418	-582	-0.70
10	836009958	-42	-0.05
20	836010004	4	0.00
30	836010000	0	0.00
40	836009832	-168	-0.20
50	836009868	-132	-0.16

Frequency Stability versus Temperature for channel 800:

Channel 800	Frequency 849.000 MHz		
Temperature	Measured	Difference	
[°C]	[Hz]	[Hz]	[ppm]
-30	848999508	-492	-0.58
-20	848999492	-508	-0.60
-10	848999310	-690	-0.81
0	848999512	-488	-0.57

20	849000044	44	0.05
30	848999872	-128	-0.15
40	848999818	-182	-0.21
50	848999812	-188	-0.22

4.5 FREQUENCY STABILITY VERSUS VOLTAGE

Test Lab: MPB Technologies Inc. Airdrie Test Personnel: Steven Tarkowski Test Date: 30 November 2001	Product: AL200
Test Result, AL200: PASS	
Objectives/Criteria 30 Nov 2001: Temperature = 21.0 °C Humidity = 28 %	Specifications FCC 22.355 Frequency tolerance +/- 2.5 ppm

Center Frequency Variations caused by Supply Voltage on AL200			
Frequency of RF carrier: 836.01 MHz Variation versus nominal voltage of 13.6 volts.			
AL200 Input Supply Voltage	836.01 MHz Center Frequency Error	Lower Limit at neg 2.5 PPM	Upper Limit at pos 2.5 PPM
Vdc	KHz	KHz	KHz
8	0.04	-2.090025	2.090025
13	0	-2.090025	2.090025
18	-0.03	-2.090025	2.090025
24	-0.06	-2.090025	2.090025
32	-0.09	-2.090025	2.090025
36	-0.1	-2.090025	2.090025

4.6 Output Power: EFFECTIVE RADIATED POWER

Test Lab: MPB Technologies Inc. Airdrie Test Personnel: Steven Tarkowski Test Date: 24 Nov 2001	Product: AL200
Test Result, AL200: PASS	
Objectives/Criteria 24 Nov 2001: Temperature = 21.0 °C Humidity = 28 %	Specifications FCC Part 22.913 ERP < 7 Watts
The maximum conducted Output Power was measured with the EUT transmitting on channel 800. The EUT Output Power was measured as 28.42 dBm on the power meter. With 0.3 dB loss in the TNC to N adapter, the corrected value for the EUT Output Power at 849.02 MHz becomes 28.72 dBm. Therefore the maximum conducted Output Power is 744.7 mW. According to the user's manual, the maximum gain of the cellular antenna to be used with the transmitter is 3 dBd. Therefore the maximum effective radiated power (ERP) is 1.49 Watts.	

4.7 AUDIO FILTER CHARACTERISTICS

Test Lab: MPB Technologies Inc. Airdrie Test Personnel: Steven Tarkowski Test Date: 30 November 2001	Product: AL200
Test Result, AL200: PASS	
Objectives/Criteria 25 Nov 2001: Temperature = 21.0 °C Humidity = 28 %	Specifications FCC Part 22.915(d) Signals must be attenuated, relative to the level at 1 kHz, as follows: 3 – 5.9 kHz and 6.1 – 15 kHz by $-40 \log (f/3)$ dB, 5.9 – 6.1 kHz, -35 dB, > 15 kHz, -28 dB.
Input Level constant at 20 mV peak to peak. Noise level from unmodulated transmitter is 0.220 KHz. Note: ratio of 12KHz to 2.9 KHz gives 12.3 dB for limit below 3 KHz.	

Modulation Characteristics corrected for pre-emphasis ON. The deviation is measured from the microphone input.

Modulation Freq. (Hz)	FM Deviation including noise (kHz)	FM Deviation (kHz)	FM Deviation relative to 1 KHz	FM Deviation, de-emphasis applied	FCC Limit
50	0.540	0.320	-18.46	7.56	12.3
100	0.380	0.160	-24.48	-4.48	12.3
150	0.365	0.145	-25.34	-8.86	12.3
200	0.450	0.230	-21.33	-7.35	12.3
250	0.663	0.443	-15.63	-3.59	12.3
300	0.883	0.663	-12.13	-1.67	12.3
400	1.270	1.050	-8.14	-0.18	12.3
500	1.530	1.310	-6.22	-0.20	12.3

input.**

Pre-emphasis is ON.

4.8 MODULATION DEVIATION LIMITING

Test Lab: MPB Technologies Inc. Airdrie Test Personnel: Russ Braathen (of CSI Wireless) Test Date: 18 December 2001	Product: AL200
Test Result, AL200: PASS	
Objectives/Criteria	Specifications Fcc Part 22.915(c): Peak Deviation at +/- 12 KHz +/- 10%. Limits are then 10.8 KHz to 13.2 KHz.
The measured peak is 11.54 kHz. The EUT passes.	

AssetLink Deviation Limiting Test for FCC 22.915

0.0225 volts RMS stepped to 0.00225 V RMS at 5 times a second.

Peak hold deviation with above input is 12.39 KHz including noise.

4.0 KHz deviation is measured with 0.00225 volts RMS at input.

This varies, depending on direction of change of level.

Also:

4.0 KHz deviation with noise is obtained from 0.00102 volts RMS

4.5 KHz deviation with noise is obtained from 0.0014 volts RMS.

Note that the compressor changes the input non-linearly.

Re-testing: 0.022 volts RMS to 0.0022 volts RMS at 5 times a second: 11.66 KHz

Re-testing: 0.0225 volts RMS to 0.00225 volts RMS at 5 times a second: 12.24 KHz

There are two distinct level of inputs due to selection of L1 mic gain.

Setting input level to 0.001 volts RMS, at 2500 Hz, measuring top, mid and bottom channels:

Channel	Dev
1	4.025
367	4.030
800	4.032

Stepping from 0.0100 volts RMS to 0.001 volts RMS at 2500 Hz 5 times a second:

Channel	Peak Hold Dev	Peak Hold Noise	Peak Dev
1	12.380	0.880	11.500
367	12.370	0.881	11.489
800	12.380	0.880	11.500

Tests for various levels at 2500 Hz tone, stepping to 10 times level:

From	To	From Dev	To Dev	Peak Hold Dev	
volts RMS	volts RMS	KHz FM	KHz FM	KHz FM	
0.001	0.01	4.05	9.52	12.39	
0.00124	0.0124	4.45	9.46	12.41	
0.00225	0.0225	5.9	9.513	12.36	

Test for 2500 Hz stepping 15 dB in level:

From	To	From Dev	To Dev	Peak Hold Dev	
volts RMS	volts RMS	KHz FM	KHz FM	KHz FM	
0.00124	0.0774	4.43	9.47	12.15	

Detector used was pk+/-2HOLD, and 20 Hz to 99 KHz filter.

Noise using peak hold was found to be 870 Hz.

Test performed by CSI (Russ Braathen)
Test Date: 18 December 2001
EUT is AL200 S/N 49

- * Transmit antenna used for substitution was a dipole antenna (Roberts Antenna)
 ** Transmit antenna used for substitution was a horn antenna (EMCO 3115)
 *** The GAP2 antenna from CSI Wireless was connected to the transmitter.
 Spurious Emission Attenuation Limit equals 43 + 10 log (P in Watts) = 41.72 dB

5.0 TEST FACILITY

5.1 LOCATION

The EUT was tested for Electromagnetic Compatibility at the Electronics Test Centre, located in Airdrie, Alberta, Canada.

The RF Anechoic Chamber (RFAC) is identified as Chamber 1, located in the main building complex at the Electronics Test Centre. Its usable working space measures 10.6 m long x 7.3 m wide x 6.5 m high.

This test site is listed with the FCC under Registration Number 99541. Measurements taken at this site are accepted by Industry Canada per file number IC 2046-1.

The floor, walls and ceiling consist of annealed steel panels. The walls and ceiling are covered with ferrite tile, augmented by RF absorbant foam material on the end wall nearest the turntable, and on the adjacent walls and the ceiling. The chamber floor supports a 15 cm high internal floor, constructed of annealed steel panels, that forms the ground plane, and is bonded to the chamber walls.

The 3-m diameter turntable is flush-mounted with the floor. A sub-floor cable-way is provided to route cables between the turntable pit and EUT support equipment. Cables reach the EUT through an opening in the centre of the turntable.

Test instrumentation and EUT support equipment is located in two shielded vestibules located at the side of the main room. Cables are routed through bulkhead panels between the rooms as required. Power feeds are routed into the main room and vestibules through line filters providing at least 100 dB of attenuation between 10 kHz and 10 GHz.

5.2 GROUNDING PLAN

The EUT was located on a wooden table 80 cm above the ground plane. The EUT was grounded according to the client's specifications.

5.3 POWER

AC power was supplied via an Underwriter's Laboratories ULW100-69, 100 dB, 100 Ampere wall mounted filter. Bonding to ground is implemented at the chamber wall.

5.4 EMISSIONS PROFILE

Ambient conducted and radiated electromagnetic emission profiles were generated throughout the tests and are included in the test data.

5.5 TEST CONFIGURATION

5.5.1 Tabletop Equipment

The following diagrams illustrate the configuration of the EUT test and **Radiated Emissions** measurement equipment for Radiated and Conducted Emissions Testing of tabletop equipment.

Conducted Emissions

5.5.2 Rack Mount

The following diagrams illustrate the configuration of the EUT test and measurement equipment for Radiated and Conducted Emissions Testing of rack mounted equipment.

Radiated Emissions

Conducted Emissions

6.0 TEST EQUIPMENT

The following equipment was used for this procedure. All measurement devices are calibrated annually, traceable to NIST.

6.1 RADIATED EMISSIONS

- a) Spectrum Analyzer with RF Preselector
- b) CISPR Quasi-peak Adapter
- c) Power Isolation Transformers
- d) Biconilog antenna (20 MHz to 2 GHz)
- e) Antenna mast positioner, and controller
- f) Flush-mounted turntable, and controller
- g) Personal Computer and EMC software

6.2 CONDUCTED EMISSIONS

- a) Spectrum Analyzer with RF Preselector
- b) Line Impedance Stabilization Network, 50 μ H
- c) CISPR Quasi-peak Adapter
- d) Isolation Transformer
- e) Personal Computer and EMC software

6.3 CALIBRATION

All measurement instrumentation conforms to ANSI C63.2. Calibration is maintained in accordance with manufacturer recommendations. Each measurement device is labeled with its ETC asset number and calibration due date.

6.3.1 CALIBRATION ACCURACY

Test equipment used to provide quantitative measurements are calibrated with standards traceable to the National Research Council, National Institute of Standards and Technology or other national standards. Instrumentation systems for emissions measurements have the following accuracies:

Frequency = ± 1 kHz
Amplitude (RE) = ± 4.01 dB
Amplitude (CE) = ± 3.25 dB

6.3.2 TEST EQUIPMENT DESCRIPTION

The equipment used in the tests was selected from the following list.

Instrument	Manufacturer	Model No.	Asset No.	Calibration Due
Spectrum Analyzer	Hewlett Packard	8566B	9565	11 April 2002
Spectrum Analyzer	Hewlett Packard	8566B	9168	30 January 2002
RF Preselector	Hewlett Packard	85685A	9563	29 May 2002
RF Preselector	Hewlett Packard	85685A	9728	1 August 2002
Quasi-Peak Adapter	Hewlett Packard	85650A	9243	22 June 2002
Biconilog Antenna	ARA	Lpb-2520/A	4318	13 June 2002
Dual Ridged Guide Antenna	EMCO	3115	9588	22 June 2002
Low Noise Amplifier	MITEQ	JS43-01001800-21-5P	4354	14 February 2002
Power Meter	Hewlett Packard	437B	4423	13 April 2002
Power Sensor	Hewlett Packard	8481A	4424	28 November 2001
RF Communication Test Set*	Agilent	8920B	US39225383	2 Oct 2003
Oscilloscope	Tektronix	2236	9058	30 January 2002
Function Generator	Hewlett Packard	3312A	9092	28 October 1998

* Client test equipment.

Appendix A

AL200 - Test Sample Description (from data provided by CSI Wireless Inc.)

Product Name	Asset Link	Number of units to be tested		1
Part/Model No.	AL200	Serial No.	49	
Product Application		Product Category		
Commercial ☒ Military ☐		Telecommunication ☒ Information Technology ☐ Surface Transportation ☐		Aerospace ☐ Test & Measurement ☐ Other ☐
GENERAL INFORMATION REQUIRED FOR ALL PRODUCTS				
What are the dimensions and weight?	6"x4"x1" 0.4 kG	Typical installation instructions or configuration (Please Attach)		
What countries would you like to market you product in	USA & Canada	List of internally generated frequencies (MHz)	914-940, 24.5535, 90, 44-55, 14.85, 16	
Power Requirements: (Voltage, AC/DC, Hz, Current)	8.0 V to 18 V dc (16 to 36 V)	Duration of self-test (delay between fault and alarm)		1 minute
Peripheral support equipment (to be supplied by client)	Cellcom CVDm program, Serial Ad., Hands-free headset (Radio Shack 43-1951)	Are we to do the submission?	YES/NO	
Description and number of Interconnecting leads & cables	2x DC and 3x digital communications			
Brief functional description	Cellular telephone with integral GPS			
Any additional information?				
WIRELESS PRODUCTS ONLY				
Is your unit a transmitter, receiver or transceiver?	Transceiver	Is this the spread spectrum device?	YES/NO	
What is the power output?	0.6 Watts	If yes, is it a direct sequencer or frequency hopper	-	
How many Antennas?	2	What is the bandwidth to your operating frequency?		
How may channels (frequencies)?	900	Is your antenna removable?	YES/NO	
What is the separation of those channels?	30 kHz	What type of connector?	TNC/SMA	
What is the operating frequency(s)?	824 – 849 MHz	Is the transmitting signal always on?	YES/NO	
How many different antennas are available for sale with the unit?	Cellular, GPS or dual antenna	What is the gain of each antenna?	Cellular is < 3 dBi, GPS is 14 dB receive	
Prepared By:	Russ Braathen	Title: RF Engineer	Date: 14 Nov 2001	

Test Sample:
AL200

FCC Part 15, Subpart C
(2000) & FCC Part 22,
Subpart H (2000)

Report No.:c05e2473
Rev. 4

Appendix B:
Receive Band Emissions for AL200
