

Straubing, January 31, 2000

TEST-REPORT**No. 50530-00035****for****GDO Deluxe with RC40-02/05****Receiver for Garage Door Opener System****Applicant:** ELDAT GmbH**Purpose of testing:** To show compliance withFCC Code of Federal Regulations,
Part 15 Subpart C, Sections §15.207
and §15.209Industry Canada Radio Standards
Specification RSS-210 Issue 2,
Sections 7.3 and 7.4 (Category I
Equipment)

Note:

The test data of this report relate only to the individual item which has been tested.
This report shall not be reproduced except in full extent without the written approval of
the testing laboratory.

6. Equipment List

To facilitate reference to test equipment used for related tests, each item of test equipment and ancillaries such as cables are identified (numbered) by the Test Laboratory.

No.	Type	Model	Serial Number	Manufacturer
01	Spectrum Analyzer	R 3271	05050023	Advantest
02	EMI Test Receiver	ESMI	839379/013 839587/006	Rohde & Schwarz

1. Administrative Data

Equipment Under Test (EUT): GDO Deluxe
Serial number: ---
Type of equipment: Receiver for garage door opener system
Parts/accessories: Receiver module RC40-02/05

Applicant:
(full address) ELDAT GmbH
Elektronik und Datentechnik
Im Gewerbepark 14
D-15711 Zeesen
Germany

Contract identification: ---
Contact person: Mr. Puppel
Manufacturer: ELDAT GmbH

Receipt of EUT: January 14, 2000
Date of test: January 17 to 27, 2000
Note: ---

Test Laboratory:
(full address): Senton GmbH EMI/EMC Test Center
Aeussere Fruehlingstrasse 45
D-94315 Straubing
Germany
Contact person: Mr. Johann Roidt
FCC file number: 31040/SIT 1300F2
Industry Canada file number: IC 3050

Responsible for testing: Karl Roidt
Responsible for test report: Karl Roidt (cb)

2. Summary of Test Results

The tested sample complies with the requirements set forth in the

**Code of Regulations Part 15 Subpart C, Sections §15.207 and §15.209
(intentional radiators) of the Federal Communication Commission (FCC)**

and the

**Radio Standards Specification RSS-210 Issue 2, Sections 7.3 and 7.4 for
Low Power Licence-Exempt Radiocommunication Devices of Industry Canada.**

Johann Roidt
Technical Manager

Karl Roidt
Test Engineer

3. Operation Mode of EUT

- receiver operating continuously
- with supply voltage 115 V AC

4. Configuration of EUT and Peripheral Devices

Configuration of EUT

EUT is configured as stand-alone device in horizontal position

Configuration of cables of EUT

- non-shielded AC-supply line (fixed)
- non-shielded wires connected to powerhead

Configuration of peripheral devices connected to EUT

5. Measuring Methods

5.1. AC Wireline Conducted Emissions 0.45 MHz - 30 MHz (FCC §15.207 / RSS-210 Section 7.4)

AC wireline conducted emissions are measured in the frequency range 0.45 MHz to 30 MHz. The bandwidth of the EMI-Receiver is set to 9 kHz with detector-function set to CISPR quasi-peak.

The test setup is made in accordance with ANSI C63.4-1992.

Measurements are performed on phase and neutral lines of the power-cords of the tested system. Preliminary scans are taken with the detector-function of the EMI-receiver set to peak to determine the conducted EMI-profile of the EUT. At the final test the cables and equipment are placed and moved within the range of positions likely to find their maximum emissions.

See figure 1 for the measurement setup.

Test equipment used (see equipment list for details):

04, 22, 60, 63

Figure 1: Measurement setup for conducted emission test

5.2. Radiated Emission 30 MHz - 1 GHz (FCC §15.209 / RSS-210 Section 7.3)

Radiated emissions are measured over the frequency range from 30 MHz to 1 GHz. The bandwidth of the EMI-receiver is set to 120 kHz and the detector-function is set to CISPR quasi-peak.

The test setup is made in accordance with ANSI C63.4-1992.

Measurements are made in both the horizontal and vertical planes of polarization.

Preliminary scans are taken in a semi-anechoic room using a spectrum analyzer with the detector function set to peak. Hand-held or body-worn devices are rotated through three orthogonal axes to determine which attitude and configuration produces the highest emission relative to the limit and therefore shall be used for final testing.

All tests are performed at a test-distance of 3 meters.

For final testing an open-area test-site is used. During the tests the EUT is rotated all around and the receiving-antenna is raised and lowered from 1 meter to 4 meters to find the maximum levels of emissions. The cables and equipment is placed and moved within the range of position likely to find their maximum emissions.

See figure 2 for the measurement setup.

Test equipment used (see equipment list for details):

01, 02, 05, 12, 38, 39, 40, 41, 58, 61, 64, 66
