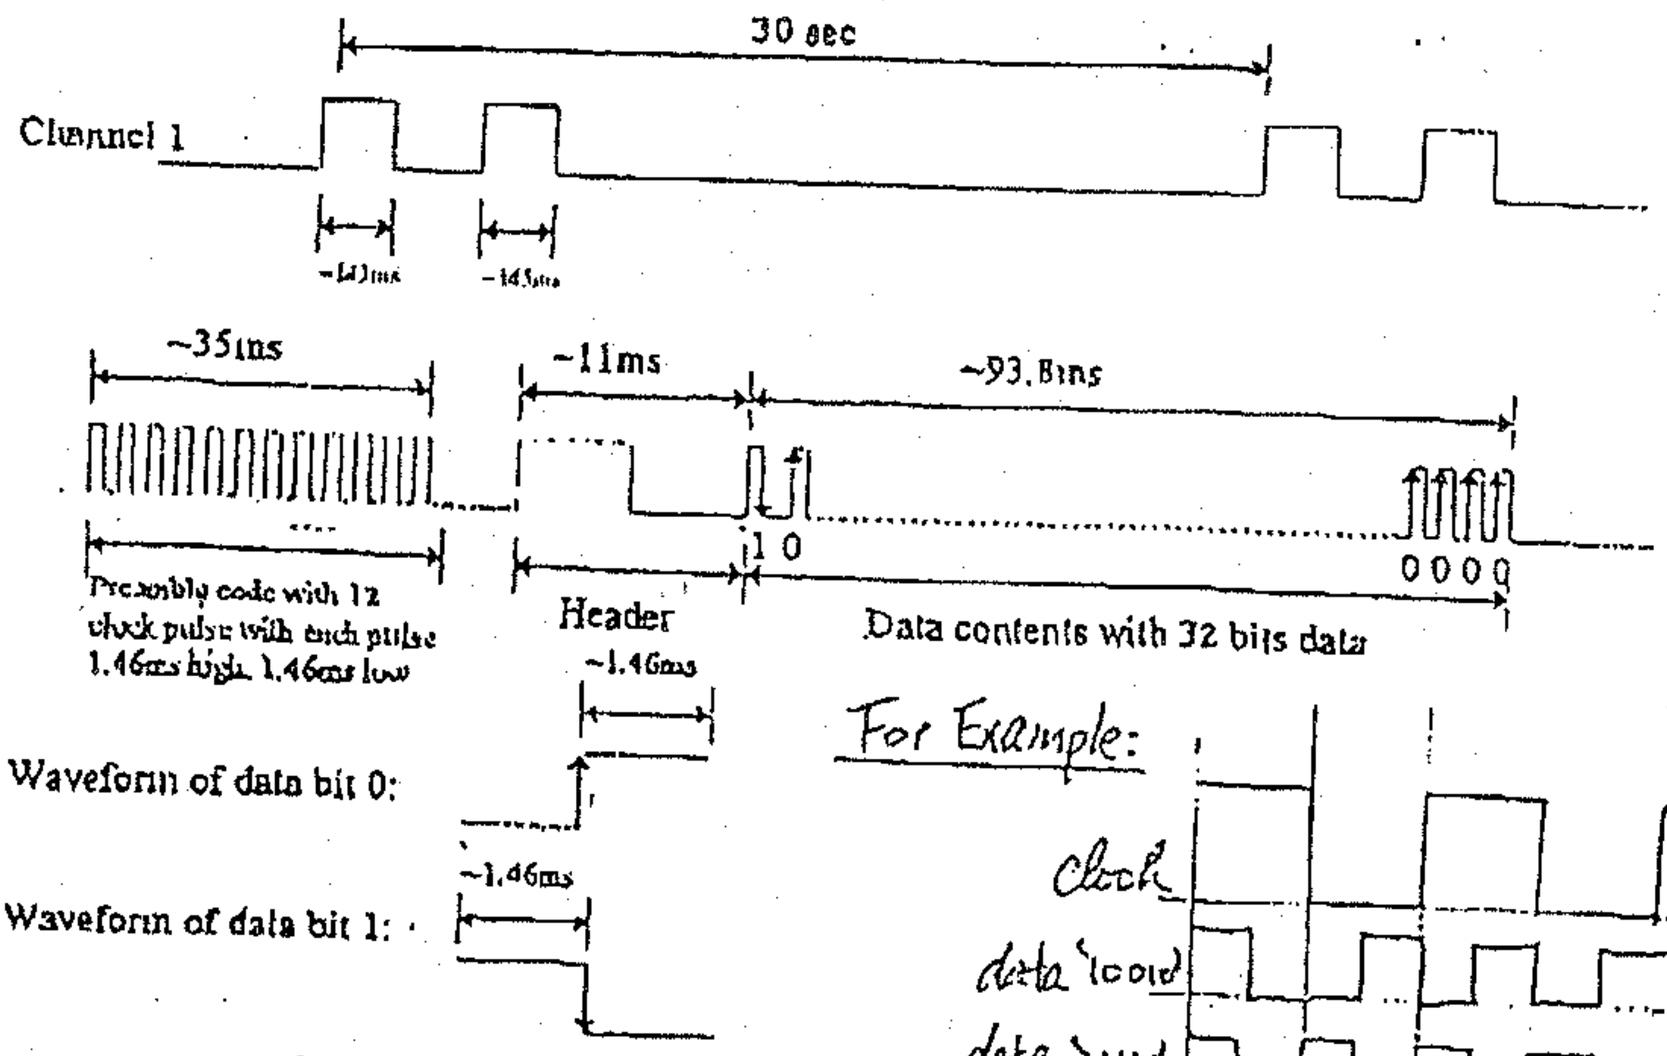
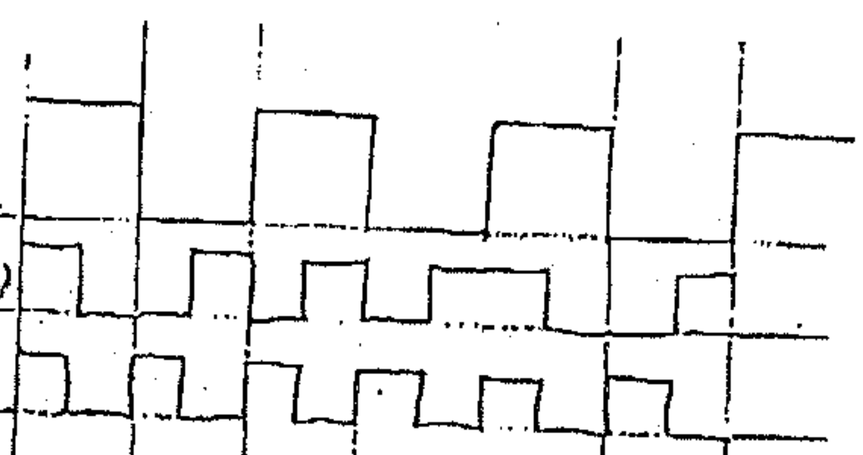
SUBJECT : Transmission Data Timing

With the conversation with you yesterday about the THR128 Transmission timing, the following are the timing you required. Since the data format is in Manchester encoding, the total time for the Transmission high is constant for each transmission, which is about 140ms per 30sec(for channel 1). If you have any other questions about the transmission timing, please feel free to ask us.

Transmission period of the THR128:
Channel 1 : 30s
Channel 2 : 29s
Channel 3 : 31s



For Example:



Conclusion:
No matter what the data is, the total 'ON' time is equal to total 'OFF' time.
