

The Belt clip for normal usage

The Belt clip of MTD-7500 that is applicable on the outside market is designed as front side should be faced to outward due to the position of Antenna and headset jack. They designed the phone cannot clip on reverse position. If users clip on reverse position, they cannot use headset as well as the belt clip cannot fit on Antenna position. So, the phone is placed on right position all the times.

We added on the user's manual as follows;

“The front side (Mirror side) of the phone should be faced to outward”

When front side is faced to outward, the antenna should be as close as the body then this made us think the worst case in contrast of your thought.
