NVLAP LAB CODE: 100426-0

JANUARY 1999

This document contains 42 pages including this one.

**KTL Dallas, Inc. authorizes the above named company to reproduce this report provided
it is reproduced in its entirety and for use by the company's employees only.**

**Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility
of such third parties. KTL Dallas, Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of
decisions made or actions based on this report.**

This report applies only to the items tested.

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1

Section 1. Summary Of Test Results

General:

All measurements are traceable to national standards.

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC Part 15, Subpart C, Paragraph 15.247 for Direct Sequence Spread Spectrum Devices.

Abstract:

NAME OF TEST	PARA. NO.	SPEC.	MEAS.	RESULT
Powerline Conducted Emissions	15.207 (a)	48 dB μ V	N/A	N/A
Occupied Bandwidth	15.247 (a)(2)	≥ 500 kHz	4.5 MHz	Pass
Peak Power Output	15.247 (b)	1 Watt	50 mW	Pass
Spurious Emissions (Antenna Conducted)	15.247 (c)	-20 dBc	N/A	N/A
Spurious Emissions	15.247 (c)	Table 15.209 (a)	-18.25 Db(H) -9.08 dB(H) 72 dB μ V(V)	Pass Pass Pass
Transmitter Power Density	15.247 (d)	$\leq +8$ dBm	35.8 dB μ V/Hz	Pass
Processing Gain	15.247 (e)	≥ 10 dB	N/A	Not Tested

Footnotes For N/A's:

Powerline Conducted Emissions	N/A Battery Powered
Spurious Emissions (Antenna Conducted)	N/A Non-detachable Antenna
Processing Gain	Not Tested per Client's Request

Test Conditions:	Temperature:	Within Standard Day Levels °C
	Humidity:	Within Standard Day Levels %

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1

THIS TEST REPORT RELATES ONLY TO THE ITEM(S) TESTED.

THE FOLLOWING DEVIATIONS FROM, ADDITIONS TO, OR EXCLUSIONS FROM THE TEST SPECIFICATIONS HAVE BEEN MADE:

Powerline Conducted Emissions was not applicable as the EUT is battery powered.

Spurious Emissions (Antenna Conducted) was not applicable as the EUT has a non-detachable antenna.

Processing Gain was not tested per the client's request.

Section 6. Spurious Emissions (Antenna Conducted)

NAME OF TEST: Spurious Emissions (Antenna Conducted) PARA. NO.: 15.247(c)

N/A
Non-detachable Antenna

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1

Section 7. Spurious Emissions (Radiated)

NAME OF TEST: Spurious Emissions (Radiated)	PARA. NO.: 15.247(c)
TESTED BY: Michael Sundstrom	DATES: 11/25/98, 12/04/98, 12/04/98

Test Results:**The EUT complies.****Test # RE 3 (30 MHz to 300 MHz)**

The worst-case emission level is 19.39 dB μ V/m at 114.390 MHz at a distance of 3 meters on the Vertical polarization. This is 24.11 dB below the quasi-peak specification limit of 43.5 dB μ V/m.

Test # RE 4 (300 MHz to 1 GHz)

The worst-case emission level is 38.67 dB μ V/m at 960.480 MHz at a distance of 3 meters on the Horizontal polarization. This is 15.33 dB below the quasi-peak specification limit of 54 dB μ V/m.

Test # MW 3 (1 GHz to 10 GHz)

The worst-case microwave radiated emission is 72 dB μ V/m at 1.82 GHz at a distance of 3 meters at the Vertical polarization. This is 20 dB below the measured carrier.

Measurement Data:

See test data on pages 21, 22, and 24.

ANNEX A

TEST METHODOLOGIES

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1

Section A1. Powerline Conducted Emissions

Test Method - Powerline Conducted Emissions

PARA. NO.: 15.207(a)

Test Conditions: Standard Temperature and Humidity
Standard Test Voltage

Minimum Standard: The R.F. that is conducted back onto the AC power line on any frequency within the band 0.45 to 30 MHz shall not exceed 250 μ V (48 dB μ V) across 50 ohms.

EQUIPMENT: Professional Transmitter
*FCC ID: NQQPS911-9805-1***Section A2. Occupied Bandwidth****Test Method - Occupied Bandwidth****PARA. NO.: 15.247(a)(2)****Test Conditions:** Standard Temperature and Humidity
Standard Test Voltage**Minimum Standard:** The minimum bandwidth shall be at least 500 kHz.**Method Of Measurement:**

The spectrum analyzer is set as follows:

RBW: 100 kHz
VBW: 100 kHz
Span: >RBW
LOG dB/div.: 2 dB
Sweep: Auto

Number of channels tested:

Tuning Range	Number Of Channels Tested	Channel Location In Band
1 MHz or Less	1	Middle
1 to 10 MHz	2	Top And Bottom
More Than 10 MHz	3	Top, Middle, Bottom

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1**Section A3. Peak Power Output****Test Method - Peak Power Output****PARA. NO.: 15.247(b)****Test Conditions:** Standard Temperature and Humidity
Standard Test Voltage**Minimum Standard:** The maximum peak power output shall not exceed 1 Watt.
If transmitting antennas of directional gain greater than 6 dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.**Direct Measurement Method For Detachable Antennas:**

If the antenna is detachable, a peak power meter is used to measure the power output with the transmitter operating into a 50 ohm load.

Calculation Of EIRP For Integral Antenna:If the antenna is not detachable from the circuit, then the Peak Power Output is derived from the peak radiated field strength of the fundamental emission by using the plane wave relation $GP/4\pi R^2 = E^2/120\pi$ and proceeding as follows:

$$P = \frac{E^2 R^2}{30G} = \frac{E^2 3^2}{30G}$$

where,

P = the equivalent isotropic radiated power in Watts

E = the maximum measured field strength in V/m

R = the measurement range (3 meters)

G = the numeric gain of the transmit antenna in relation to an isotropic radiator

The RBW of the spectrum analyzer shall be set to a value greater than the measured 6 dB occupied bandwidth of the E.U.T.

Number of channels tested:

Tuning Range	Number Of Channels Tested	Channel Location In Band
1 MHz or Less	1	Middle
1 to 10 MHz	2	Top And Bottom
More Than 10 MHz	3	Top, Middle, Bottom

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1**Section A4. Spurious Emissions at Antenna Terminal****Test Method - Spurious Emissions at Antenna Terminal****PARA. NO.: 15.247(c)****Test Conditions:** Standard Temperature and Humidity
Standard Test Voltage**Minimum Standard:** In any 100 kHz bandwidth outside the 902 - 928 MHz bands, emissions shall be at least 20 dB below the fundamental emission or shall not exceed the following field strength limits. Emissions falling in the restricted bands of 15.205 shall not exceed the following field strength limits:

Frequency (MHz)	Field Strength ($\mu\text{V/m @ 3m}$)	Field Strength (dB @ 3m)
30 - 88	100	40.0
88 - 216	150	43.5
216 - 960	200	46.0
Above 960	500	54.0

*The spectrum is searched to the 10th harmonic.***Method Of Measurement:****Upper Band Edge**

RBW: At least 1% of span/div.

VBW: >RBW

Span: As necessary to display any spurious at band edge.

Sweep: Auto

Center Frequency: 928 MHz

Marker: Peak of fundamental emission

Marker Δ : Peak of highest spurious level above 928 MHz**Lower Band Edge**

RBW: At least 1% of span/div.

VBW: >RBW

Span: As necessary to display any spurious at band edge.

Sweep: Auto

Center Frequency: 902 MHz

Marker: Peak of fundamental emission

Marker Δ : Peak of highest spurious level below 902 MHz**30 MHz - 10th Harmonic Plot**

RBW: 100 kHz

VBW: 300 kHz

Sweep: Auto

Display line: -20 dBc

Number of channels tested:

Tuning Range	Number Of Channels Tested	Channel Location In Band
1 MHz or Less	1	Middle
1 to 10 MHz	2	Top And Bottom
More Than 10 MHz	3	Top, Middle, Bottom

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1**Section A5. Radiated Spurious Emissions****Test Method - Radiated Spurious Emissions****PARA. NO.: 15.247(c)****Test Conditions:** Standard Temperature and Humidity
Standard Test Voltage**Minimum Standard:** In any 100kHz bandwidth outside the 902 - 928 MHz bands emissions shall be at least 20 dB below the fundamental emission or shall not exceed the following field strength limits. *Emissions falling in the restricted bands of 15.205 shall not exceed the following field strength limits:*

Frequency (MHz)	Field Strength ($\mu\text{V/m}$ @ 3m)	Field Strength (dB @ 3m)
30 - 88	100	40.0
88 - 216	150	43.5
216 - 960	200	46.0
Above 960	500	54.0

Section A6. Transmitter Power Density

Test Method - Transmitter Power Density

PARA. NO.: 15.247(d)

Test Conditions: Standard Temperature and Humidity
Standard Test Voltage

Minimum Standard: The transmitted power density averaged over any 1 second interval shall not be greater than +8 dBm in any 3 kHz bandwidth.

Method Of Measurement: The spectrum analyzer is set as follows:

RBW: 3 kHz

VBW: >3 kHz

Span: => measured 6 dB bandwidth

Sweep: Span(kHz)/3 (i.e. for a span of 1.5 MHz the sweep rate is 1500/3 = 500 sec.

LOG dB/div.: 2 dB

Note: For devices with spectrum line spacing ≤ 3 kHz, the RBW of the analyzer is reduced until the spectral lines are resolved. The measurement data is normalized to 3 kHz by summing the power of all the individual spectral lines within a 3 kHz band in linear power units.

For Devices With Integral Antenna:

For devices with non-detachable antennas, the received field strength is peaked and the spectrum analyzer is set as above. The peak emission level is then measured and converted to a field strength by adding the appropriate antenna factor and cable loss. This field strength is then converted to an equivalent isotropic radiated power using the same method as described for Peak Power output.

Number of channels tested:

Tuning Range	Number Of Channels Tested	Channel Location In Band
1 MHz or Less	1	Middle
1 to 10 MHz	2	Top And Bottom
More Than 10 MHz	3	Top, Middle, Bottom

EQUIPMENT: Professional Transmitter
FCC ID: NQQPS911-9805-1

Section A9. Processing Gain

Test Method - Processing Gain

PARA. NO.: 15.247(e)

Test Conditions: Standard Temperature and Humidity
Standard Test Voltage

Minimum Standard: The processing gain shall be at least 10 dB.

Method Of Measurement: The CW jamming margin method is used to determine the processing gain. A CW signal generator is stepped across the passband of the receiver in 50 kHz increments. At each point the signal generator level required to obtain the recommended bit error rate is recorded. The jammer to signal ratio (J/S) is then calculated. The worst 20% of the J/S points is discarded. The lowest remaining J/S ratio is used to calculate the processing gain.

Calculation Of Processing Gain:

The processing gain is determined by measuring the jamming margin of the E.U.T. and using the following formula:

$$\text{Jamming Margin} = G_p - (S/N)_{\text{out}} - L_{\text{sys}}$$

For a receiver using non-coherent detection the value $(S/N)_{\text{out}}$ is calculated using the formula:

$P_e = (1/2)\text{EXP}\{-E/2N_o\}$ where P_e is the probability of error (minimum Bit Error Rate required for proper operation).

E/N_o is $(S/N)_{\text{out}}$

For example, for a bit error rate of 10^{-4} a S/N ratio of 12.3 dB is required.

L_{sys} (system losses) is assumed to be 2 dB.

Therefore $G_p = M_j + (S/N)_{\text{out}} + L_{\text{sys}}$

Measurement performed at 915 MHz.

Transmitter Power Density & Peak Power At Antenna Terminals

If the E.U.T. has an integral (non-detachable) antenna, the above test is performed as a radiated measurement and the result is reported as EIRP.

Processing Gain

NOTE: This is a typical setup. The setup may vary slightly since many devices have BER test functions built into the device.
