Columbia, MD 21046

Dear Mr. Dichoso,

You have requested information regarding Home Wireless Networks submittal for FCC ID: NSK0016A.

After the application was submitted, Home Wireless Networks returned with the same model except that it had been modified to produce higher output power. They had a few minor changes to the digital device circuitry that should only have affected the power line conducted emissions. Only the transmitter tests have been provided in the certification application to the FCC since the digital device was tested and approved under a separate DoC report.

The addendum report contains a majority of the data for the final model except for tests that were considered duplicative and are only found in the original report. Therefore the following portions of the original report digital device radiated emissions should still be referenced in order to review all necessary required information.

- 1.2 Related Submittal(s)/Grant(s)
- 2.6 Antenna Description
- 2.13 Processing Gain

Additionally all the original internal photographs submitted are accurate, except for 4 which are included in the back of the addendum report.

I hope that you find that this information fulfills the necessary FCC requirements for the Part 15 Certification requirements. If you have any questions, please feel free to contact me at (770)741-0717.

Sincerely,

Timothy R. Johnson
