Tap Antenna Installation Instructions

The Evolve System Tap Antenna receives its data from a signal inserted in the cable system channel feed. In order for the tap to work properly, it must be installed between the incoming cable and the TV, VCR, or Cable box.

1. Connect the incoming TV cable to one of the terminals on the tap antenna. Connect a cable from the other terminal on the tap antenna to the TV, VCR, or Cable Box.
2. Plug the power adapter into a non-switched wall outlet.
3. The tap antenna must be located at least 24 inches above ground level and within 30 feet of the remote for best results. Reposition as necessary until remote performance is satisfactory.
4. Follow instructions in the remote installation guide to initialize the remote.
