1.0 LETTER OF CERTIFICATION

PDE Laboratories, Inc is accredited by the U.S. National Institute Standards Technology under NVLAP as suppliers of test results to the criteria established by ISO/IEC guide 25 and ISO 9002.

PDE Laboratories, Inc is approved by TUV Product Services as a test facility testing to the EMC DIRECTIVE 89/336/EEC.

PDE Laboratories, Inc is approved as a contractor to Radio Frequency investigation LTD, a UK Competent Body and by Radio Frequency Technologies LTD, a Competent Body of Ireland.

The data, data evaluation and equipment configuration represented herein are a true and accurate representation of the test sample (EUT), and of the radio frequency susceptibility characteristics and measurements obtained as of the dates and at the times of the test under the conditions specified.

The test results provided with this report indicate that the equipment tested is COMPLIANT with the following Rules and Regulations:

- 1) The Code of Federal Regulations 47, Part 15, Subpart C and ANSI C63.4

Tests Performed By:

Terry Reysbergen

David Feher

2.0 SUMMARY OF TEST

2.1A ADMINISTRATIVE DATA

DEVICE TESTED: Description: UHF Transmitter (418 MHz)
Model: Watch Patrol RF

ACCESSORIES: N/A

APPLICANT: Electronic Monitoring Systems (EMS) Inc.
26081 Merit Circle, Suite 108
Laguna Hills, Calif. 92653

FCC ID: NSNEMSWPRFA

CONTACT: Michael O'Donnell

MANUFACTURER: Electronic Monitoring Systems (EMS) Inc.

2.1B TEST DESCRIPTION

FREQUENCY RANGES: Conducted: 0.45 - 30.0 MHz
Radiated: 30.0 - 1000 MHz

TEST LOCATION: 950 Calle Negocio, San Clemente, Calif. 92673

TEST DATES: April 12, 2001

PURPOSE OF TEST: To demonstrate compliance with the limits of FCC Part 15C

TESTS PERFORMED:

1. Conducted Emissions Per ANSI C63.4.
2. Radiated emissions Per ANSI C63.4 at 10 Meters.
3. Engineering Evaluations

All Measurement Data is acquired according to the content of ANSI C63.4. The Test Site Data and performance complies with ANSI C63.4, unless supplemented with additional requirements as noted in the test report.

2.2 TEST RESULTS - CONDUCTED EMISSIONS

Conducted Emission Results - High or Supply Lead

*****Not applicable: Device battery powered**

2.2 TEST RESULTS - CONDUCTED EMISSIONS

Conducted Emission Results – Low or Return Lead

*****Not applicable: Device battery powered**

2.3 TEST RESULTS - RADIATED EMISSIONS

Measurements taken at 3 Meters.

2.3 TEST RESULTS - RADIATED EMISSIONS (Carrier @418 MHz)

Measurements taken at 3 Meters.

2.3 TEST RESULTS - RADIATED EMISSIONS (w/ Modulation)

Measurements taken at 3 Meters.

NOTE:

This product was tested and evaluated at all harmonics of the internal Local oscillator frequency to the 10th at 4.180 Ghz.

NO EMISSIONS WERE DETECTED ABOVE 2.508 Ghz.

The measurements in the following chart are taken directly at the output of the EUT with the internal antenna removed. The actual output impedance of the RF output stage is unknown and is suspected to be a complex impedance. The measurements were made with a spectrum analyzer presenting a 50-Ohm load to the EUT, which is one of several standard impedances for circuits of this type. The direct measurements seem to correlate with the measurements taken at 3 Meters when normalized for path loss, spiral antenna characteristics and site antenna factors.

2.4 MODIFICATIONS

None required to demonstrate compliance. Unit compliant as tested

2.5 INTENT TO INCORPORATE ENGINEERING REWORK (If required by 2.4 above)

INTENT TO INCORPORATE ENGINEERING REWORK

This is a letter of Intent to Incorporate the Engineering Rework as described in the above referenced PDE Laboratories. Test Report, Section 2.4, to achieve compliance with the intent of the testing as documented. I, the undersigned have the responsibility for marketing the device tested, and have implemented procedures to monitor the quality of the product (device tested), during continued manufacturing processes and possible product changes or enhancements, and take the responsibility to monitor continued compliance through periodic re-testing during the life of product (device tested), and re-testing any new configuration which might alter the status of the product's continued compliance to the applicable Rules and Regulations.

3.4 OPERATING MODES

The Electronic Monitoring Systems (EMS) Inc. 's UHF Transmitter, Model: Watch Patrol RF operated continuously during all tests.

The product was configured by EMS internally so it would continuously transmit as opposed to the periodic transmissions. This was done to speed the measurement time of the fundamental and all detectable harmonics as recorded in this report.

Absolute emission level measurements were made with various orientations of the unit relative to the receiving antenna. Prior to actual OATS testing, a near-field RF probe was used to exhaustively survey the EUT for their internal Local Oscillator and clock frequencies.

All final data was taken with the EUT in the above mode of operation. The position of the peripherals (if required in the test set up) and interconnect cables (if required in the test set up) were varied to provide generally the highest emissions prior to the final tests.

Absolute emission level measurements were made in an automatic orientation fashion such that the EUT was uniquely positioned for each of the significant emissions detected in the prescan evaluation. Those data are hereby recorded.
