0 Summary

0.1 Technical Report Summary

Type of Authorization

Certification for an Intentional Radiator (Periodic operation in the band above 70 MHz)

Applicable FCC Rules

Prepared in accordance with the requirements of FCC Rules and Regulations as listed in 47 CFR Ch.1 Parts 2 (10-1-05 Edition) and 15 (10-1-05 Edition). The following subparts are applicable to the results in this test report.

Part 2, Subpart J - Equipment Authorization Procedures, Certification

Part 15, Subpart C – Intentional Radiators

§ 15.201 Equipment authorization requirement

§ 15.207 Conducted limits

§ 15.209 Radiated emission limits; general requirements

§ 15.231 Periodic operation in the band 40.66-40.70 MHz, above 70 MHz

Note:
none

Summary Test Results:

The EUT complied with all performed tests as listed in chapter 0.2 Measurement Summary.

1 Administrative Data

1.1 Testing Laboratory

Company Name: 7 Layers AG

Address Borsigstr. 11
40880 Ratingen
Germany

This facility has been fully described in a report submitted to the FCC and accepted under the registration number 96716.

The test facility is also accredited by the following accreditation organisation:
- Deutscher Akkreditierungs Rat DAR-Registration no. DAT-P-192/99-01

Responsible for Accreditation Scope: Dipl.-Ing. Bernhard Retka
Dipl.-Ing. Robert Machulec

Report Template Version: 2006-08-31

1.2 Project Data

Responsible for testing and report: Dipl.-Ing. Robert Machulec

Date of Test(s): 2006-03-02 to 2006-09-15
Date of Report: 2006-09-21

1.3 Applicant Data

Company Name: Visteon Deutschland GmbH
Body & Security Electronics Core Design

Address: Visteonstrasse 4-10
D-50170 Kerpen
Germany

Contact Person: Werner Löbach
Tel.: +49-221-5406-274

1.4 Manufacturer Data

Company Name: please see applicant data

Contact Person:

2 Product labeling

2.1 FCC ID label

At the time of the report there was no FCC label available.

2.2 Location of the label on the EUT

see above

3 Test object Data

3.1 General EUT Description

Equipment under Test	Transmitter for remote keyless entry
Type Designation:	Land Rover L359
Kind of Device: (optional)	315 MHz transmitter
Voltage Type:	DC
Voltage level:	3.0 V

General product description:

The vehicle remote keyless entry transmitter is a wireless handheld remote control unit. (Transmitter only, periodic operation in the band above 70 MHz) the operating frequency is 315 MHz. The transmitter is activated manually by a switch and is deactivated automatically within 5 seconds after release of the switch.

The EUT provides the following ports:

Ports
enclosure

The main components of the EUT are listed and described in Chapter 3.2

3.2 EUT Main components

Type, S/N, Short Descriptions etc. used in this Test Report

Short Description	Equipment under Test	Type Designation	Serial No.	HW Status	SW Status	Date of Receipt
EUT A	Transmitter for remote keyless entry	Land Rover L359	No.7	VP6H5F-15K601-B*	-	2006-03-02

Remark: EUT A is equipped with an integral antenna.

NOTE: The short description is used to simplify the identification of the EUT in this test report.

3.3 Ancillary Equipment

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But nevertheless Ancillary Equipment can influence the test results.

Short Description	Equipment under Test	Type Designation	HW Status	SW Status	Serial no.	FCC ID
-------------------	----------------------	------------------	-----------	-----------	------------	--------

3.4 EUT Setups

This chapter describes the combination of EUTs and ancillary equipment used for testing.

Setup No.	Combination of EUT's	Description
Setup_a01	EUT A	setup for measurements

3.5 Operating Modes

This chapter describes the operating modes of the EUT's used for testing.

Op. Mode	Description of Operating Modes	Remarks
op-mode 1	periodic operation	Transmitter is sending a pulse coded signal
op-mode 2	continuous operation	Transmitter is sending a CW signal continuously. Special op mode for test purpose only.

4 Test Results

4.1 Spurious radiated emissions

Standard FCC Part 15, 10-1-05
 Subpart C

The test was performed according to: ANSI C 63.4, 2003

4.1.1 Test Description

The test set-up was made in accordance to the general provisions of ANSI C 63.4-2003. The Equipment Under Test (EUT) was set up on a non-conductive table 1.0 x 2.0 m in the semi-anechoic chamber. The test was performed at the distance of 3 m between the EUT and the receiving antenna.

The radiated emissions measurements were made in a typical installation configuration. The measurement procedure is implemented into the EMI test software ES-K1 from R&S.

1. Measurement up to 30 MHz

The test set-up was made in accordance to the general provisions of ANSI C 63.4-2003. The Equipment Under Test (EUT) was set up on a non-conductive table in the anechoic chamber.

The radiated emissions measurements were made in a typical installation configuration. The measurement procedure is implemented into the EMI test software ES-K1 from R&S. The Loop antenna HFH2-Z2 is used.

Step 1: pre measurement

- Anechoic chamber
- Antenna distance: 10m
- Detector: Peak-Maxhold
- Frequency range: 0.009 - 0.15 and 0.15 – 30 MHz
- Frequency steps: 0.1 kHz and 5 kHz
- IF-Bandwidth: 0.2 kHz and 10 kHz
- Measuring time / Frequency step: 100 ms

Intention of this step is, to determine the radiated EMI-profile of the EUT. Afterwards the relevant emissions for the final measurement are identified.

Step 2: final measurement

For the relevant emissions determined in step 1, an additional measurement with the following settings will be performed. Intention of this step is to find the maximum emission level.

- Open area test side
- Antenna distance: according to the Standard
- Detector: Quasi-Peak
- Frequency range: 0.009 – 30 MHz
- Frequency steps: measurement at frequencies detected in step 1
- IF-Bandwidth: 200 Hz - 10 kHz
- Measuring time / Frequency step: 100 ms

2. Measurement above 30 MHz

Measurement up to 1 GHz

Step 1: Preliminary scan

Preliminary test to identify the highest amplitudes relative to the limit.

Settings for step 1:

- Detector: Peak-Maxhold
- Frequency range: 30 – 1000 MHz
- Frequency steps: 60 kHz
- IF-Bandwidth: 120 kHz

- Measuring time / Frequency step: 100 μ s
- Turntable angle range: -180 to 180°
- Turntable step size: 90°
- Height variation range: 1 – 3m
- Height variation step size: 2m
- Polarisation: Horizontal + Vertical

Intention of this step is, to determine the radiated EMI-profile of the EUT. Afterwards the relevant emissions for the final measurement are identified.

Step 2: second measurement

For the relevant emissions determined in step 1, an additional measurement with the following settings will be performed. Intention of this step is, to find out the approximate turntable angle and antenna height for each frequency.

- Detector: Peak – Maxhold
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 100ms
- Turntable angle range: -180 to 180°
- Turntable step size: 45°
- Height variation range: 1 – 4m
- Height variation step size: 0.5m
- Polarisation: horizontal + vertical

After this step the EMI test system has determined the following values for each frequency (of step 1):

- Frequency
- Azimuth value (of turntable)
- Antenna height

The last two values have now the following accuracy:

- Azimuth value (of turntable): 45°
- Antenna height: 0.5m

Step 3: final measurement

In this step the accuracy of the turntable azimuth and antenna height will be improved. This is necessary to find out the maximum value of every frequency.

For each frequency the turntable azimuth and antenna height, which was determined in step 3, will be adjusted. The turntable azimuth will be slowly varied by $\pm 22.5^\circ$ around this value. During this action the value of emission is continuously measured. The turntable azimuth at the highest emission will be recorded and adjusted. In this position the antenna height is also slowly varied by ± 25 cm around the antenna height determined in step 3. During this action the value of emission is also continuously measured. The antenna height of the highest emission will also be recorded and adjusted.

- Detector: Peak – Maxhold
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 100ms
- Turntable angle range: -22.5° to $+ 22.5^\circ$ around the value determined in step 2
- Height variation range: -0.25m to $+ 0.25$ m around the value determined in step 2

Step 4: final measurement with QP detector

With the settings determined in step 3, the final measurement will be performed:

EMI receiver settings for step 4:

- Detector: Quasi-Peak(< 1GHz)
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 1s

Measurement above 1GHz

The following modifications apply to the measurement procedure for the frequency range

above 1 GHz:

The measurement distance was reduced to 1m. The results were extrapolated by the extrapolation factor of 20 dB/decade (inverse linear distance for field strength measurements, inverse linear-distance squared for the power reference level measurements). Due to the fact that in this frequency range a double ridged wave guided horn antenna (up to 18 GHz) and a horn antenna (18-25 GHz) are used, the steps 2-4 are omitted. Step 1 was performed with one height of the receiving antenna only.

EMI receiver settings:

- Detector: Peak, Average
- RBW = VBW = 100 kHz

After the measurement a plot will be generated which contains a diagram with the results of the preliminary scan and a chart with the frequencies and values of the results of the final measurement.

4.1.2 Test Requirements / Limits

FCC Part 15, Subpart C, §15.231(b)

(1) A radiated emission test applies to the fundamental frequency.

Frequency Range (MHz)	Limit (dBμV/m)
40.66 – 40.70	67.04
70 – 130	67.04
130 – 174	67.04- 71.48
174 – 260	71.48
260 – 470	71.48- 81.93
above 470	81.93

(2) A radiated emission test applies to harmonic/spurs that fall in the restricted bands as listed in § 15.205(a). The maximum permitted QP (< 1GHz) and average (> 1GHz) field strength is listed in § 15.209(a).

(3) FCC Part 15, Subpart C, §15.209, Radiated Emission Limits

Frequency Range (MHz)	Limit (dBμV/m)
30 – 88	40.0
88 – 216	43.5
216 – 960	46.0
above 960	54.0

§15.35(b)...., there is also a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit....

Used conversion factor: $\text{Limit (dB}\mu\text{V/m)} = 20 \log (\text{Limit } (\mu\text{V/m)}/1\mu\text{V/m})$

4.1.3 Test Protocol

Temperature: 24 °C
Air Pressure: 1003 hPa
Humidity: 33 %

4.1.3.1 Measurement up to 30 MHz

Op. Mode	Setup	Port
op-mode 2	Setup_a01	Enclosure

Polarisation	Frequency MHz	Corrected value dBµV / m			Limit dBµV / m	Limit dBµV / m	Limit dBµV / m	Delta to limit dB	Delta to limit dB
		QP	Peak	AV	QP	Peak	AV	QP / Peak	AV
0°									
90°									

Remark: No (further) spurious emissions in the range 20 dB below the limit found therefore step 2 was not performed.

The found peak at 99.5kHz is emission from loop antenna power supply.

4.1.3.2 Measurement above 30 MHz

Op. Mode	Setup	Port
op-mode 2	Setup_a01	Enclosure

Polarisation Vertical + horizontal	Frequency GHz	Corrected value dBµV / m			Limit dBµV / m	Limit dBµV / m	Limit dBµV / m	Delta to limit dB	Delta to limit dB
		QP	Peak	AV	QP	Peak	AV	QP / Peak	AV
	0.315	65.20			75.60			10.40	
	0.630	38.29			55.60			17.31	
	0.945	36.70			55.60			18.90	
	1.260			32.65			55.60		41.35
	1.575			41.56			54.00		32.44
	1.890			33.81			55.60		21.79
	2.205			34.64			54.00		19.36
	2.520			37.96			55.60		17.64
	2.835			40.26			54.00		13.74
	3.150			39.85			55.60		15.75

Remark: No (further) spurious emissions in the range 20 dB below the limit found.

The test was performed in the frequency range from 30MHz to 3.2GHz. For this test a EUT sending a CW signal was used therefore the peak value was measured. The value listed above includes the correction factor of the test system and the duty cycle determines by the test "Duty cycle measurement (based on dwell time measurement)".

4.1.4 Test result: Spurious radiated emissions

FCC Part 15, Subpart C	Op. Mode	Result
	op-mode 2	passed

4.2 Duty cycle measurement (based on dwell time measurement)

Standard FCC Part 15, 10-1-05
Subpart C

The test was performed according to: FCC §15.31, 10-1-05

4.2.1 Test Description

The Equipment Under Test (EUT) was setup in a shielded room to perform the dwell time measurements.

For analyzer settings please see measurement plots in annex.

4.2.2 Test Limits

A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

This test is also performed to determine the duty cycle of the transmitter and calculate the correction factor for pulse modulated transmitter. This factor is used as a correction factor for the field strength measurement.

Duty cycle = $((L1 \cdot N1) + (L2 \cdot N2) + (Ln \cdot Nn)) / 100$ or T, whichever is less

Correction factor = $20 \cdot \text{LOG}(\text{Duty cycle})$

4.2.3 Test Protocol

Temperature: 24 °C
Air Pressure: 1003 hPa
Humidity: 33 %

Op. Mode	Setup	Port
op-mode 1	Setup_a01	Enclosure

Step 1	holdover time	Less than 5s
Step 2	Cycle to determine the on/off ratio within a cycle (period T)	100.5 ms
Step 3	sweep of a data word to determine the on time within a data word (L1-LN).	L1=0.25 ms L2=0.49 ms
Step 4	determine the number of pulses (N1-NN). First range (trigger delay=0ms).	N1=11 N2=11
Step 5	determine the number of pulses (N1-NN). Second range (trigger delay=20ms).	N1=18 N2=11
Step 6	determine the number of pulses (N1-NN). Third range (trigger delay=40ms).	N1=10 N2=4

4.2.4 Test result: Duty cycle / correction factor

$T > 100\text{ms} = > 100\text{ms}$; $L1 = 0.25\text{ms}$; $L2 = 0.49\text{ms}$; $N1 = 39$; $N2 = 26$;

Duty cycle = $((39 \cdot 0.25) + (26 \cdot 0.49)) / 100 = 0.2249$

Correction factor = $20 \cdot \text{LOG}(0.1989) = -12.96\text{dB}$

FCC Part 15, Subpart C		Op. Mode	Result
		op-mode 1	This test has no result. It is performed to found the correction factor for the test spurious emissions radiated. As worst case the factor is set to -12dB

4.3 Peak power output

Standard FCC Part 15, 10-1-05
Subpart C

The test was performed according to: FCC §15.31, 10-1-05

4.3.1 Test Description

The Equipment Under Test (EUT) was setup in a shielded room to perform the dwell time measurements.

The analyzer settings are the same like for the test spurious radiated emissions.

4.3.2 Test Limits

FCC Part 15, Subpart C, §15.231(b)

(1) A radiated emission test applies to the fundamental frequency.

Fundamental frequency (MHz)	Limit for field strength of fundamental (dBμV/m)	Limit for field strength of spurious emissions (dBμV/m)
40.66 – 40.70	67.04	47.04
70 – 130	61.94	41.94
130 – 174	61.04 - 71.48	41.04 – 51.48
174 – 260	71.48	51.48
260 – 470	71.48- 81.94	51.48 – 61.94
above 470	81.94	61.94

4.3.3 Test Protocol

Temperature: 24 °C
Air Pressure: 1003 hPa
Humidity: 33 %

Op. Mode	Setup	Port
op-mode 1	Setup_b01	Enclosure (integral antenna)

Output power dBμV / m	Remarks
65.20	The Limit for 315 MHz devices is 75.6 dBμV/m for field strength of fundamental

Remark: Please see annex for the measurement plot.

4.3.4 Test result: Peak power output

FCC Part 15, Subpart C	Op. Mode	Result
	op-mode 1	passed

4.4 Occupied bandwidth

Standard FCC Part 15, 10-1-05
Subpart C

The test was performed according to: FCC §15.31, 10-1-05

4.4.1 Test Description

The Equipment Under Test (EUT) was setup in a shielded room to perform the occupied bandwidth measurements.

For analyzer settings please see measurement plots in annex.

4.4.2 Test Limits

FCC Part 15, Subpart C, §15.231 (c) The maximum 20 dB bandwidth of a transmitter operating at a frequency range:

70 MHz to 900 MHz is 0.25% of the centre frequency

above 900 MHz is 0.5% of the centre frequency

4.4.3 Test Protocol

Temperature: 24 °C

Air Pressure: 1003 hPa

Humidity: 33 %

Op. Mode	Setup	Port
op-mode 1	Setup_b01	Enclosure (integral antenna)

99 % bandwidth kHz	20 dB bandwidth kHz	Remarks
125	65	The limit for 20 dB bandwidth is 315MHz * 0.25% = 787.5 kHz

Remark: Please see annex for the measurement plot.

4.4.4 Test result: Bandwidth of momentary signals

RSS210 A1.1.3		Op. Mode	Result
		op-mode 1	passed

Fully/Semi AE Chamber	10.58x6.38x6		Frankonia
Turntable	DS 420S	420/573/99	HD GmbH, H. Deisel
Valve Control Unit (pneum.)	VE 615P	615/348/99	HD GmbH, H. Deisel

*7 layers Bluetooth Full RF Test
Solution*

*Bluetooth RF Conformance
Test System TS8960*

Equipment	Type	Serial No.	Manufacturer
10 MHz Reference	MFS	5489/001	Efratom
Power Meter 832025/059	NRVD	832025/059	Rohde & Schwarz
Power Sensor A 832279/013	NRV-Z1	832279/013	Rohde & Schwarz
Power Sensor B 832279/015	NRV-Z1	832279/015	Rohde & Schwarz
Power Supply	E3632A	MY40003776	Agilent
Power Supply	PS-2403D	-	Conrad
RF Step Attenuator 833695/001	RSP	833695/001	Rohde & Schwarz
Rubidium Frequency Normal	MFS	002	Efratom
Signal Analyzer FSIQ26 832695/007	FSIQ26	832695/007	Rohde & Schwarz
Signal Generator 833680/003	SMP 03	833680/003	Rohde & Schwarz
Signal Generator A 834344/002	SMIQ03B	834344/002	Rohde & Schwarz
Signal Generator B 832870/017	SMIQ03B	832870/017	Rohde & Schwarz
Signal Switching and Conditioning Unit	SSCU	338826/005	Rohde & Schwarz
Signalling Unit PTW60 838312/014	PTW60 for TS8960	838312/014	Rohde & Schwarz
System Controller 829323/008	PSM12	829323/008	Rohde & Schwarz

6 Photo Report

Photo 1: Test setup for radiated measurements

Photo 2: EUT (PCB, front and rear side)

Photo 3: EUT (enclosure, front and rear side)

7 Setup Drawings

Remark: Depending on the frequency range suitable antenna types, attenuators or preamplifiers are used.

Drawing 1: Setup in the Anechoic chamber. For measurements below 1 GHz the ground was replaced by a conducting ground plane.

8 Annex measurement plots

8.1 Radiated emissions (f<30MHz)

Antenna position 90°
Horizontal EUT position

Antenna position 90°
Vertical EUT position

Antenna position 0°
Horizontal EUT position

Antenna position 0°
Vertical EUT position

8.2 Duty cycle measurement (based on dwell time measurement)

Op. Mode

Op-mode 1

Date: 29.MAR.2006 10:15:30

Step 1: holdover time.

Date: 15.SEP.2006 08:27:26

Step 2: 150ms sweep. Cycle to determine the on/off ratio within a cycle (period T).

Date: 22.SEP.2006 10:36:53

Step 3: sweep of a data word to determine the on time within a data word (L1 to LN).

Date: 15.SEP.2006 09:23:08

Step 4: determine the number of pulses (N1-NN). First range (trigger delay=0ms).

Date: 15.SEP.2006 09:24:19

Step 5: determine the number of pulses (N1-NN). Second range (trigger delay=20ms).

Date: 15.SEP.2006 09:25:24

Step 6: determine the number of pulses (N1-NN). Third range (trigger delay=40ms).

8.3 Occupied bandwidth

8.3.1 Occupied bandwidth operating mode 1

Op. Mode 20 dB bandwidth

op-mode 1

Op. Mode 99 % bandwidth
op-mode 1

Date: 14.SEP.2006 10:42:51
