Sample Receipt Date: _____

Test Report Number: 00F246B
Model Designation: EA155
Product Description: Water Meter
Transmitter

Sample Test Date: see data sheets

Marketing Approval _____

Description of non-standard test method or test practice: **None**

Estimated Measurement Uncertainty: **Not Applicable**

Special limitations of use: **None**

Traceability: ***reference standards of measurement have been calibrated by a competent body using standards traceable to the NIST.***

According to testing performed at Product Safety Engineering, Inc., the above-mentioned unit is in compliance with the electromagnetic compatibility requirements defined in regulations indicated on page (3) of the test report. The test results contained herein relate only to the model(s) identified above. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical characteristics.

As the responsible EMC Project Engineer, I hereby declare that the equipment tested as specified above conforms to the requirements indicated on page (3) of the test report.

Equipment Under Test (EUT) Test Operation Mode - Emission tests :

The device under test was operated under the following conditions during emissions testing:

- ☐ - Standby
- ☐ - Test program (H - Pattern)
- ☐ - Test program (color bar)
- ☐ - Test program (customer specific)
- ☒ - Practice operation
- ☐ - Normal Operating Mode
- ☐ -

Configuration of the device under test:

- ☐ - See System Under Test Information in Appendix B

Rationale for EUT setup / configuration:

The EUT was transmitting data continuously, which is not a normal mode of operation. The rationale for continuous operation was so that any emission points could be observed and that the duty cycle could be easily measured.

Emission Test Results:

Conducted emissions 10/150/450 kHz - 30 MHz			
The requirements are		☐ - MET	☐ - NOT MET
Minimum limit margin	dB	at	MHz
Maximum limit exceeding	dB	at	MHz
Remarks:			

Radiated emissions (magnetic field) 10 kHz - 30 MHz			
The requirements are		☐ - MET	☐ - NOT MET
Minimum limit margin	dB	at	MHz
Maximum limit exceeding	dB	at	MHz
Remarks:			

Radiated emissions (electric field) 30 MHz - 1000 MHz			
The requirements are		☒ - MET	☐ - NOT MET
Minimum limit margin	4.9 dB	at	418 MHz
Maximum limit exceeding	dB	at	MHz
Remarks:			

The limits were calculated per 15.231(e) and determined to be (72.3) dBuV/m for the fundamental and (52.3) dBuV/m for spurious. Based on measured duty cycle (see notes under General Remarks), the limit is further relaxed by (20) dB to (92.3) dBuV/m & (72.3) dBuV/m respectively.

Interference Power at the mains and interface cables 30 MHz - 300 MHz

GENERAL REMARKS:

Duty Cycle calculation:

The duty cycle is exactly the same as the original equipment and is always less than (10%) during any (100) mS period of time. The total duration of the transmission is less than (1) second and repeats at intervals no less than once each (5) hours. Plots of the data stream are included in Appendix B.

Bandwidth is less than (0.25%) of center frequency, (1,045,000) Hz.
A bandwidth plot is included in Appendix B.

SUMMARY:

The requirements according to the technical regulations are

☒ - met

☐ - **not** met.

The device under test does

☒ - fulfill the general approval requirements mentioned on page 3.

☐ - **not** fulfill the general approval requirements mentioned on page 3.

Measurement Protocol

The test methodology followed during the collection of the data included within this technical report was ANSI C63.4:1992.

The EUT was powered with (120) VAC / (60) Hz during the collection of data included within.

The data is compared to the FCC Part 15 Class B limits.

The "EMI" instrumentation is capable of calculating the final emission level based on the following formula:

Level at the receiver (dBμV) + Antenna Correction Factor (dB/M) + Cable Loss (dB) - Preamp Gain (dB) = Actual Level in dBμV/M.

The sample calculation below is based on the actual test data collected:

Observed Level	53.3	dBμV	
ACF	10.5	dB/M	
Cable Loss	0.8	dB	
Preamp Gain	26.0	dB	
Actual Level	38.6	dBμV/M	@ 50.3 MHz
