

Application Overview

This application seeks certification of an ultra wideband device under the FCC Waiver to Time Domain dated June 29, 1999.

The UWB device is a through-wall radar. It is battery powered. The radar includes an integral antenna completely enclosed within the device. The device meets all requirements of the waiver, including the requirement to contain a dead man switch.

Intertek Testing Services in Atlanta GA measured the device in accordance with the measurement procedures identified in the Waiver as well as the applicable section of Part 15.
