

System integration

The communication modules (interface modules) are links between the RFID components (reader and transponder) and the higher-level controllers (e.g. SIMATIC S7), or PCs or computers.

Interfacing to the controller

The readers are connected to the controller via the following interface or communications modules:

- ASM 456
- ASM 475
- SIMATIC RF120C
- SIMATIC RF160C
- SIMATIC RF170C
- SIMATIC RF180C
- SIMATIC RF182C
- RFID 181EIP

Function blocks, interface modules/communication modules and readers

Function blocks are used for integration into the SIMATIC. They are used to transfer the input parameters to the reader using the "init_run"(RESET) command.

You will find information on the following blocks on the Internet in "Industry Online Support - RFID (<https://support.industry.siemens.com/cs/ww/en/ps/15105/man>)".

- FB 45 for MOBY U, MOBY D, RF200, RF300
- FB 55
- Ident profile and Ident blocks, standard function for RFID systems
- RFID standard profile; standard functions for RFID systems
- RF160C communications module with FC 44

Interface modules/communication modules and function blocks

The following table shows the most important features of the interface modules/communication modules, as well as the compatible function blocks.

When assigning parameters (HW Config) to the communications and interface modules, MOBY U, MOBY D, RF200, RF300 or RF600 must be selected.

System diagnostics

9.1 Error codes of the RF200 readers

Note

Validity of the error codes

The following error codes apply only to RF200 readers with an S-422 interface (CM mode)

You can determine the error code in two ways:

- directly on the reader/CM by counting the flashing pattern of the red error LED
- via Ident profile with the "Status" output variable

Give consideration to the form of the output variable in the following table ("0xE&FE\$00"; "&" = 1 ... 5; "\$\$" = error code).

- Through the FB45 variable "error_MOBY".

Table 9- 1 Error codes of the RF200 readers

Flashing of red LED on reader	Error code (hexa-decimal)	Description
00	00	no error
02	01	Presence error, possible causes: • The active command was not carried out completely • The transponder left the antenna field while the command was being processed - communication disruption between reader and transponder
05	05	Parameterization error, possible causes: • Unknown command • Incorrect parameter • Function not allowed
06	06	Air interface faulty
12	0C	The transponder memory cannot be written, possible cause: Hardware fault (memory faulty)
13	0D	Error in the specified memory address (access attempted to non-existent or non-accessible memory areas).
19	13	Buffer overflow: Insufficient buffer available in the reader for saving the command
20	14	Major system fault (hardware fault)
21	15	Parameter assignment error: faulty parameter in RESET command

Flashing of red LED on reader	Error code (hexa-decimal)	Description
24	18	Only a RESET command is permitted
25	19	Previous command is still active
28	1C	Antenna is already switched off/Antenna is already switched on
30	1E	Incorrect number of characters in frame

Note**Error message when memory area is protected**

For transponders with a locked or protected memory area, different error messages can occur following a write command depending on the data carrier type, e.g. MDS D1xx (NXP), D3xx (Infineon), D4xx (Fujitsu): Error 01, 0C

9.2 Diagnostics functions - STEP 7

Further information on RFID diagnostics options can be found in the following function manuals:

The antenna splitter is a power distributor with electrical isolation between the input (IN) and the two outputs (OUT1, OUT2). At the operating frequency of 13.56 MHz, the impedance at all inputs and outputs is 50 ohms.

The device is used to connect 2 to 4 antennas to a reader. Gate, C and tunnel arrangements are therefore possible (see section "Configuration options").

	HF - ON	Green	Lit when an HF signal is applied to the "IN" socket ③		
	RUN	Green	Flashes when the RF260X is in the normal operating state.		

A.2.2.4 Principle of operation

You can operate up to six antennas on one reader by using the multiplexer RF260X. The data is processed sequentially.

Antenna switchover is performed in time-multiplex mode, so by connecting several antennas together, the processing time / activation time per antenna is lengthened accordingly.

If a longer antenna cable is required between the RF290R and SIMATIC RF260X multiplexer, a 7.2 m long cable (e.g. 6GT2691-0DH72) must be used to extend it, see Ordering data (Page 339).

The excess length must then be rolled up bifilar and fastened to minimize interference from external sources.

- Antenna outputs ② (OUT 1 to OUT 3 / OUT 4 to OUT 6)

A.2.2.6 Configuration

Figure A-2 Configuration example with ANT D5

A.2.2.7 Parameterization

Parameter settings can be performed using the tool "RF290R-Set" (V9.5.2).

This tool is primarily used for parameterization and commissioning, and is not designed for productive operation.

The relevant parameters of the RF260X can be set in the "Configuration" menu under "SystemParameters > CFG15: Antenna Multiplexing" ①

Figure A-3 Menu "Configuration" MOBYDSet"

- For operation with RF260X, you need to activate the "Multiplexing" function ②.
- The number of occupied channels must be specified under "Number of Output Channels" ②.
- In "Multiplexer Valid Times" ③, the maximum time available for the antenna to read a transponder is entered. Following this time, the device switches to the next antenna automatically. If the read was successful, the time may be significantly shorter than specified here.

Note

Changing the parameter assignment

- Note that if you change the parameter settings of the reader or the RF260X in scanner mode, this may lead to frame collisions. These collisions result when the frame is sent while a transponder is present.
- The "Transponder response time" (setting: "CFG2: COM interface") during operation of the RF260X must be higher than the total delay time for all the connected antennas (CFG15: MUX-VALD-TIME × Number of Output Channels ≤ Transponder Response Time)

A.2.2.8 RF260X commands

Using the tool "RF290R-Set" (V9.5.2), certain commands can also be sent to the RF260X. In the "Commands" menu under "RF260X", the following commands can be sent:

- Detect (detection of the RF260X by the reader)
- Channel Select (set to a static channel)
- CPU-Reset (restart the RF260X software)
- Software Version (read out software and hardware versions)

A.2.3 Wide-range power supply unit for SIMATIC RF systems

A.2.3.1 Features

Wide-range power supply unit for SIMATIC RF systems	
	① DC output 1 ② DC output 2 ③ Network connector
Characteristics	
• Wide-range input ③ for use worldwide • Dimensions without mains cable: 175 x 85 x 35 mm • Dimensions including mains cable: 250 x 85 x 35 mm • CE-compliant (EU and UK versions) • UL-certified for US and Canada (US version) • Mechanically and electrically rugged design • Secondary side ①, ②: 24 VDC / 3 A • Short-circuit and no-load stability • Suitable for frame mounting • 3 versions for use in the EU, UK, US	

Description

The wide-range power supply unit for SIMATIC RF systems is a universal compact power supply and provides the user with an efficient, cost-saving solution for many different mid-range power supply tasks.

The primary switched power supply is designed for use on single-phase AC systems. The two DC outputs (sockets) are connected in parallel and protected by a built-in current limiting circuit against overload and short-circuits.

The device is vacuum-cast and prepared for Safety Class 2 applications. The EU and UK versions satisfy the low-voltage guideline as well as the current EU standards for CE conformity. Furthermore, the US version has been UL-certified for the US and Canada.

A.2.3.2 Scope of supply

- Wide-range power supply unit for SIMATIC RF systems
- 2 m mains cable (country-specific)
- Protective cover for flange outlet
- Operating Instructions

A.2.3.4 Safety Information** WARNING****Danger to life**

It is not permitted to open the device or to modify the device.

The following must also be taken into account:

- Failure to observe this requirement shall constitute a revocation of the CE approval, UL certification for the US and Canada as well as the manufacturer's warranty.
- For installation of the power supply, compliance with the DIN/VDE requirements or the country-specific regulations is essential.
- The field of application of the power supply unit is limited to "Information technology equipment" within the scope of validity of the EN 60950/VDE 0805 standard.
- When the equipment is installed, it must be ensured that the mains socket outlet is freely accessible.
- The housing can reach a temperature of +25 °C during operation without any adverse consequences. It must, however, be ensured that the power supply is covered in the case of a housing temperature of more than +25°C to protect persons from contact with the hot housing. Adequate ventilation of the power supply must be maintained under these conditions.

NOTICE**Area of application of the wide-range power supply unit**

The wide-range power supply unit may only be used for SIMATIC products in the specifically described area of application and for the documented purpose.

If the wide-range power supply unit for SIMATIC RF systems is used for an end product other than one from the SIMATIC RF family, the following must be taken into account:

- The electric strength test of the end product is to be based upon a maximum working voltage of: Transition from primary to SELV: 353 VDC, 620 Vpk
- The following secondary output circuits are SELV (low voltage; SELV = Safety Extra Low Voltage): all
- The following secondary output circuits are at non-hazardous energy levels: all
- The power supply terminals and/or connectors are suitable for field wiring if terminals are provided.
- The maximum investigated branch circuit rating is: 20 A
- The investigated pollution degree is: 2

! WARNING

Liability

If the wide-range power supply unit for SIMATIC RF systems is connected to an end product other than one from the SIMATIC RF family, the end user is responsible and liable for operation of the system or end product that includes the wide-range power supply unit for SIMATIC RF systems.

NOTICE

Restriction to the approval of the wide-range power supply

The SIMATIC RF290R reader may only be operated with power supplies that have received KETI approval. There is currently no KETI approval for the wide-range power supply (6GT2898-0AAx0), which is why it may not be operated in South Korea.

To be able to operate the SIMATIC RF290 reader in South Korea, use only a power unit that meets the following requirements: 230 VAC, 24 VDC / 3 A; KC safety approved

A.2.3.5 Connecting

- There are three different (country-specific) mains cables for the EU, UK and US. The appropriate mains cable must be connected to the primary input of the power supply.

Note

It is only permissible to insert or remove the mains cable when the power supply is de-energized.

- The wide-range power supply unit has total insulation (Safety Class 2), IP65
- It can be mounted using four fixing holes.

The angled connector has a height of $h = 29$ mm and a length of $l = 38$ mm. Remember that due to the construction, the distance between the edge of the connector and the edge of the reader housing (H) is higher.

Figure A-17 Distance between connector edge and housing edge

The distance between the edge of the connector and the edge of the reader housing (H) is as follows: RF210R/RF220R = 33 mm, RF240R/RF260R = 36 mm and RF290R = 37 mm. If you look at the reader from below, the angled connector points 90° to the right. With the RF290R reader the angle is approximately 135° .

Reader connection system

The connecting cable has a length of 2 m (standard) and 5 m. Extensions up to 1000 m are possible with the 6GT2891-4F... plug-in cables.
