1.0 JOB DESCRIPTION

1.1 Client Information

The WipClip-V131C has been tested at the request of

Company: Tellus Technology
6140 Stevenson Blvd.
Fremont, CA 94538
USA

Name of contact: Mr. Ray Baker
Telephone: (510) 498-8500 X150
Fax: ((510) 580-1600

1.2 Equipment under test (EUT)

Product Descriptions:

Equipment	CDPD Modem for PDA		
Trade Name	Tellus Technology	P/N.	WIPClipV131C
FCC ID	NZ6V8131C	S/N No.	Not Labeled
Category	Portable, Handheld	RF Exposure	Uncontrolled Environment
Frequency Band	824 -849 MHz	System	CDPD Modem

EUT Antenna Description			
Type	Dipole	Configuration	360° Rotation
Dimensions	30mm (L)	Gain	0 dBi
Location	On top-right side		

Use of Product : The Tellus WIPClip™ CDPD Springboard™ module is a CDPD (Cellular Digital Packet Data) wireless data modem designed for Handspring™ Visor™ PDA (Personal Digital Assistant). The WIPClip easily snaps into the Springboard expansion slot with a 64-pin connector.

Manufacturer: SAME as above.

Production is planned: [X] Yes, [] No

EUT receive date: May 24, 2001

EUT received condition: Good working condition prototype

Test start date: May 25

Test end date: June 2, 2001

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

1.3 Test plan reference

FCC rule part 2.1093, FCC Docket 96-326 & Supplement C to OET Bulletin 65

1.4 System test configuration

1.4.1 System block diagram & Support equipment

Support Equipment			
Item #	Equipment	Model No.	Serial No.
1	Handspring PDA	Visor	N/A

S: Shielded	U: Unshielded	m: meters
--------------------	----------------------	------------------

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

1.4.2 Test Position

Configuration A

**Figure 1: EUT Back Side towards phantom,
Antenna in the straight position at 4 cm distance to phantom**

Configuration A-1

Same as *Configuration A* but body of PDA is 4 cm distance to phantom instead of antenna

Configuration B

**Figure 2: EUT Front Side (Face) towards phantom,
Antenna in the straight position at 4 cm distance to phantom**

Configuration C

**Figure 3: EUT Front Side (Face) towards phantom,
Antenna in the right angle position at 4 cm distance to phantom**

Configuration D

**Figure 4: EUT Vertical (Top) towards phantom,
Antenna in the right angle position at 4 cm distance to phantom**

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

1.4.3 Test Condition

During tests the worst case data (max RF coupling) was determined with following conditions:

EUT Antenna	Fixed length	Orientation	Configuration A
Usage	Handheld Device Operates with a PDA	Distance between antenna axis at the joint and the liquid surface:	4mm
Simulating human Body/hand	Yes	EUT Battery	Unit powered from External Power supply.
Power output	26.0 dBm (ERP), 28dBm (EIRP)		

See report section 1.4.2 for the configuration details of the EUT Position

The spatial peak SAR values were accessed for lowest, middle and highest operating channels, defined by the manufacturer.

Radiated power measurements were performed by the customer.

1.5 Modifications required for compliance

Intertek Testing Services implemented no modifications.

1.6 Additions, deviations and exclusions from standards

No additions, deviations or exclusions have been made from standard.

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

2.0 SAR EVALUATION**2.1 SAR Limits**

The following FCC limits for SAR apply to devices operate in General Population/Uncontrolled Exposure environment:

EXPOSURE (General Population/Uncontrolled Exposure environment)	SAR (W/kg)
Average over the whole body	0.08
Spatial Peak (1g)	1.60
Spatial Peak for hands, wrists, feet and ankles (10g)	4.00

2.3 System Verification

Prior to the assessment, the system was verified to the $\pm 5\%$ of the specifications by using the system validation kit. The validation was performed at 1800 MHz.

Validation kit	Targeted SAR _{1g} (mW/g)	Measured SAR _{1g} (mW/g)
D900V2, S/N #: 0013	4.03	3.93

2.4 Evaluation Procedures

The SAR evaluation was performed with the following procedures:

- a. SAR was measured at a fixed location above the reference point and used as a reference value for the assessing the power drop.
- b. The SAR distribution at the exposed side of the flat Phantom was measured at a distance of 30 mm from the inner surface of the shell. The area covered the entire dimension of the head and the horizontal grid spacing was 20 mm x 20 mm. Based on this data, the area of the maximum absorption was determined by spline interpolation.
- c. Around this point, a volume of 32 mm x 32 mm x 34 mm was assessed by measuring 5 x 5 x 7 points. On the basis of this data set, the spatial peak SAR value was evaluated with the following procedure:
 - i) The data at the surface were extrapolated, since the center of the dipoles is 2.7 mm away from the tip of the probe and the distance between the surface and the lowest measurement point is 1.6 mm. The extrapolation was based on a least square algorithm. A polynomial of the fourth order was calculated through the points in Z-axes. This polynomial was then used to evaluate the points between the surface and the probe tip.
 - ii) The maximum interpolated value was searched with a straightforward algorithm. Around this maximum, the SAR values averaged over the spatial volumes (1g or 10g) were computed using the 3-D spline interpolation algorithm. The 3-D spline is composed of three one-dimensional splines with the "Not a knot" condition (in x, y and z directions). The volume was integrated with the trapezoidal algorithm. 1000 points (10 x 10 x 10) were interpolated to calculate the average.
 - iii) All neighboring volumes were evaluated until no neighboring volume with a higher average value was found.
- d. Re-measurements of the SAR value at the same location as in step a. above. If the value changed by more than 5 %, the evaluation was repeated.

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

2.5 Test Results

The results on the following page(s) were obtained when the device was tested in the condition described in this report. Detail measurement data and plots, which reveal information about the location of the maximum SAR with respect to the device, are reported in Appendix A.

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

Measurement Results

 b) Uncertainty of the system is not included

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

3.0 TEST EQUIPMENT

3.1 Equipment List

The Specific Absorption Rate (SAR) tests were performed with the SPEAG model DASY 3 automated near-field scanning system, which is package, optimized for dosimetric evaluation of mobile radios [3].

The following major equipment/components were used for the SAR evaluations:

SAR Measurement System			
EQUIPMENT	SPECIFICATIONS	S/N #	CAL. DATE
Robot	Stäubi RX60L Repeatability: $\pm 0.025\text{mm}$ Accuracy: 0.806×10^{-3} degree Number of Axes: 6	597412-01	N/A
E-Field Probe	ET3DV5 Frequency Range: 10 MHz to 6 GHz Linearity: ± 0.2 dB Directivity: ± 0.1 dB in brain tissue	1333	04/18/01
Data Acquisition	DAE3 Measurement Range: $1\mu\text{V}$ to $>200\text{mV}$ Input offset Voltage: $< 1\mu\text{V}$ (with auto zero) Input Resistance: 200 M	317	N/A
Phantom	Generic Twin V3.0 Type: Generic Twin, Homogenous Shell Material: Fiberglass Thickness: 2 ± 0.1 mm Capacity: 20 liter Ear spacer: 4 mm (between EUT ear piece and tissue simulating liquid)	N/A	N/A
Simulated Tissue	Mixture Please see section 6.2 for details	N/A	5/22/01
Power Meter	HP 435A w/ 8481H sensor Frequency Range: 100kHz to 18 GHz Power Range: $300\mu\text{W}$ to 3W	3607U00673	08/01/00

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

3.2 Muscle Tissue Simulating Liquid

Ingredient	Frequency (824-849 MHz)
Water	54.05%
Sugar	45.05%
Salt	0.1%
Bactericide	0.8 %

The dielectric parameters were verified prior to assessment using the HP 85070A dielectric probe kit and the HP 8753C network Analyzer. The dielectric parameters were:

Frequency (MHz)	ϵ_r^*	σ^* (mho/m)	ρ^{**} (kg/m ³)
835	51.1 ± 5%	0.88 ± 10%	1000

* Worst case uncertainty of the HP 85070A dielectric probe kit

** Worst case assumption

3.3 E-Field Probe Calibration

The manufacturer in the TEM cells ifi 110 calibrated probes. To ensure consistency, a strict protocol was followed. The conversion factor (ConF) between this calibration and the measurement in the tissue simulation solution was performed by comparison with temperature measurement and computer simulations. Probe calibration factors are included in Appendix C.

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

3.4 Measurement Uncertainty

The uncertainty budget has been determined for the DASY3 measurement system according to the NIS81 [5] and the NIST 1297 [6] documents and is given in the following table. The extended uncertainty (K=2) was assessed to be 23.5 %

UNCERTAINTY BUDGET				
Uncertainty Description	Error	Distrib.	Weight	Std.Dev.
Probe Uncertainty				
Axial isotropy	±0.2 dB	U-shape	0.5	±2.4 %
Spherical isotropy	±0.4 dB	U-shape	0.5	±4.8 %
Isotropy from gradient	±0.5 dB	U-shape	0	
Spatial resolution	±0.5 %	Normal	1	±0.5 %
Linearity error	±0.2 dB	Rectang.	1	±2.7 %
Calibration error	±3.3 %	Normal	1	±3.3 %
SAR Evaluation Uncertainty				
Data acquisition error	±1 %	Rectang.	1	±0.6 %
ELF and RF disturbances	±0.25 %	Normal	1	±0.25 %
Conductivity assessment	±10 %	Rectang.	1	±5.8 %
Spatial Peak SAR Evaluation Uncertainty				
Extrapol boundary effect	±3 %	Normal	1	±3 %
Probe positioning error	±0.1 mm	Normal	1	±1 %
Integrat. and cube orient	±3 %	Normal	1	±3 %
Cube shape inaccuracies	±2 %	Rectang.	1	±1.2 %
Device positioning	±6 %	Normal	1	±6 %
Combined Uncertainties				±11.7 %

3.5 Measurement Tractability

All measurements described in this report are traceable to National Institute of Standards and Technology (NIST) standards or appropriate national standards.

Tellus Technology., Model No: WipClip-V131C

Date of Test: May 25 to June 2, 2001

4.0 WARNING LABEL INFORMATION - USA
