INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

1.2 Product Description

The GWCom Inc. Model No.: GWBASE2000UEPA is a power amplifier for base station that provides two-way access for personal messaging units with both receive and transmit capability.

For more details, refer to the attached users manual.

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

2.0 RF Power Output, FCC §2.985(a)

2.1 Test Procedure

The amplifier's output was connected to a calibrated coaxial attenuator, the other end of which was connected to a spectrum analyzer. The resolution bandwidth and the video bandwidth of the spectrum analyzer were set up to 100 kHz and 100 kHz. The attenuator was included in spectrum analyzer OFFSET function.

Transmitter output was read off the spectrum analyzer in dBm.

2.2 Test Equipment

Hewlett Packard 8481A Power Sensor, 435B Power Meter
Hewlett Packard HP8566B Spectrum Analyzer, 100 Hz - 22 GHz
Tektronix 2782 Spectrum Analyzer, 100 Hz - 40 GHz

2.3 Test Results

Refer to the attached plot shown 41.3 dBm output power.

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

3.0 Effective Radiated Power, FCC § 90.205, § 24.132(a)

Requirement: The Effective Radiated Power (ERP) must not exceed 3500 Watts.

3.1 Test Procedure

The Duplexer "Wacom WP-678/794" and antenna "Scala OGB3-900" (5 dBi) were connected to the EUT.

The EUT was positioned on a non-conductive turntable, 0.8m above the ground plane on an open test site.

The radiated emission at the fundamental frequency was measured at 3m distance with a test antenna and spectrum analyzer. During the measurement, the resolution and video bandwidth of the spectrum analyzer were set to 100 kHz. The maximum emission was recorded with the rotation of the turntable and the raising and lowering of the test antenna. The spectrum analyzer reading was recorded.

The ERP was calculated as follows:

$$ERP_{(dBm)} = E_{(dBuV/m)} + 20 \log D - 10 \log 30 - 10 \log G - 90$$

where D = 3m, distance

G = 1.64, gain of half-wave dipole

3.2 Test Equipment

Hewlett Packard HP8566B Spectrum Analyzer
EMCO Horn antenna

3.3 Test Results

Refer to the table below.

Frequency MHz	Spectrum Analyzer Reading dB(uV)	Antenna Factor dB(1/m)	Cable loss dB	Field Strength dB(uV/m)	ERP dBm
930.4	117.1	23.0	3.0	143.1	45.7

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

4.0 Occupied Bandwidth, Bandwidth Limitation, Emission masks. FCC §2.989(I), 90.209(b)(5), 90.210, 24.133(a)(1)

4.1 Test Procedure

The RF output of the EUT was connected to the input of the spectrum analyzer through sufficient attenuation.

The spectrum with no modulation was plotted.

The EUT was set up to transmit pseudo-random pattern of 9.6 kb/s and the spectrum with modulation was plotted. The plots also were made for wideband data such as 0,1,0,1...and 1,1,0,0,1,1,0,0.....

4.2 Test Equipment

HP 8566B Spectrum Analyzer, 100 Hz - 22 GHz
Tektronix 2784 Spectrum Analyzer, 100 Hz - 40 GHz
HP 7470A Plotter

4.3 Test Results

For test results refer to the attached plots 4.3.a - 4.3.d shown emission on the amplifier's output.

The emissions on the amplifier's input (output of the base station) are presented in Appendix G. These plots are copies from Application for Base Station, FCC ID: NZAGWBASE2000URCS.

As can be seen, there are no noticeable changes in the occupied bandwidth on the input and on the output.

The EUT passed the emission mask tests for 20 kHz authorized bandwidth (for Part 90) and 45 kHz authorized bandwidth (for Part 24).

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

5.0 Out of Band Emissions at Antenna Terminals , FCC §2.991

Out of Band Emissions:

The power of emissions must be attenuated below the power of the unmodulated carrier (P) on any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth - at least $43 + 10 \log P$ dB.

5.1 Test Procedure

The RF output of the EUT was connected to a spectrum analyzer through appropriate attenuation. The pseudo-random modulating signals was set up. The plots were made to show compliance with the emissions attenuation at the edges of the assigned frequency bands: 928 - 930 MHz for Part 24, 930 - 931 MHz for Part 90. Sufficient scans were also taken to show the out of band emissions if any up to 10th harmonic.

5.2 Test Equipment

HP 8566B Spectrum Analyzer, 100 Hz - 22 GHz
Tektronix 2784 Spectrum Analyzer, 100 Hz - 40 GHz
Leader LFG-1300S Function Generator
Leader LMV-182 AC Millivolt meter

5.3 Test Results

Refer to the attached plots.

The EUT passed the test.

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

Plots of Out of Band Emissions at Antenna Terminal are attached.

PLOT NUMBER	DESCRIPTION
5.3.a	Part 90, scan 929 - 930.5 MHz, High Channel, 929.99 MHz
5.3.b	Part 90, scan 928.5 - 930 MHz, Low Channel, 929.01 MHz
5.3.c - 5.3.f	Scan 1 MHz - 10 GHz

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

6.0 Field Strength of Spurious Radiation, FCC § 2.993, §15.109

6.1 Test Procedure

For radiated emission measurement below 1GHz, an antenna was connected to the transmitted output. For radiated emission measurement above 1GHz, a 50 Ohm coaxial load was connected to the transmitter output. The transmitter was placed on a wooden turntable.

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT.

The frequency range up to tenth harmonic of the fundamental frequency was investigated.

The spurious harmonic attenuation was calculated as the difference between E in dB(uV/m) at the fundamental frequency and at the spurious emission frequency.

6.2 Test Equipment

Frequency range investigated is from 30 to 5000 MHz.

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

7.0 Line Conducted Emissions, FCC § 15.107

7.1 Test Procedure

Test procedure described in the ANSI C63.4 Standard was employed.

The EUT was connected to an AC line through the LISNs.

Both HOT and NEUTRAL leads were tested.

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA Date of Test: 6/2-8/1998

INTERTEK TESTING SERVICES - Menlo Park

GWCOM, Power Amplifier for Base Station, Model: GWBASE2000UEPA **Date of Test: 6/2-8/1998**

8.0 Frequency Stability vs Temperature, FCC § 2.995(a), 24.135(a)

8.1 Test Procedure

The RF output of the EUT was connected to a spectrum analyzer via feedthrough attenuators. The EUT was placed inside the temperature chamber. The RF output cable exited the chamber through an opening.

After the temperature stabilized for approximately 20 minutes, the frequency of the output signal was recorded from the spectrum analyzer.
