The label appears as shown below. The area below the 0.8" tall area at the top is reserved for customer labelling. All FCC-compliant labeling, as well as product type labelling, is in the top section of the label. Because the customer-specific area of the label is required to be so large (for compliance labelling such as CSA, UL, CE, etc.), the FCC Part 15 statement is contained in the TIM1500 User's Manual and OEM User's Manual.

(NOTE: Internet Telemetry's previous product, the TIM100 [FCC ID O2N1005] also had large compliance labelling, and the Part 15 statement was placed in the manual there as well. The FCC had no issue with this at the time that unit was certified.)

The label is made of an aluminized plastic with a high-strength adhesive backing. It is printed using nonsoluble, heat-applied ink (Brady® printing system). The label is UV- and moisture-resistant. The label should last the expected lifetime of the equipment (about 5 years) in an outdoor environment, and is not readily detachable.
