Certification for the peripheral portion

Dear Mr. Dichoso,

please find enclosed the additional information required according to item 1 of your list of open items.

Because the Digianswer PCMCIA card is a composite device, a computer peripheral (unintentional radiator) and a transmitter (intentional radiator), a certification for the peripheral portion (unintentional radiator) is also required.

The documentation used for the certification of the transmitter is identical and can also be used for the peripheral portion too.

The only difference is the test report according to Part 15 B which has been uploaded as a separate file. Additionally, the label layout has been uploaded. The label will use the same FCC Grantee code as for the transmitter, because it has been submitted within the same filing process (731 confirmation number : EA97728).

Thank you very much

With kind regards

7 layers AG
