Sensors That Make Sense

Bontrager's family of 2.4 GHz, ANT+ digital wireless sensors makes it easy for you to get only the sensors that make sense for you.

Expand the Possibilities

Bontrager's digital sensors operate using the ANT+ protocol, which means their signal is readable by a variety of 3rd party devices (including Garmin GPS).

Is My Bike Compatible?

The best way to tell if your bike can accept our integrated sensors is to look at the fork for SpeedTrap compatibility, and at the chainstay for DuoTrap compatibility. Standard speed and cadence sensors are compatible with most Trek, Gary Fisher, and other manufacturers bike frames. Please consult your local retailer if you have questions regarding compatibility.

NOTES:
THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO OR TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER AUTHORITY TO OPERATE THE EQUIPMENT.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
-- Reorient or relocate the receiving antenna.
-- Increase the separation between the equipment and receiver.
-- Connect the equipment into an outlet on a circuit different from that to which the receiver is corrected.
-- Consult the dealer or experienced radio / TV technician for help.
