QUICK GUIDE / USER MANUAL

135 mm

A schematic diagram showing a battery symbol (a rectangle with a lightning bolt) connected to a light bulb symbol (a circle with a filament) by a horizontal line.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

To reduce the risk of interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Disconnect or relocate the receiving antenna.
- Increase the distance between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3

Additional Information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) website at <http://www.wireless.com>. The United States and Canada have adopted the same SAR limits for mobile phones used by the public as 100 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off or on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Additional Information on Specific Absorption Rates (SAR) can be found on the [FCC website](http://www.fcc.gov/Bureaus/Communications/Industry_Association) or the [Communications Industry Association \(CIA\)](http://www.fcc.gov/Bureaus/Communications/Industry_Association) website. In Canada, the SAR limit for mobile phones used by the public is 1 watt/kg (w/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn operation

This device was tested for typical body-worn operations. To comply with FCC Part 15.247, the minimum separation distance between the antenna and the user must be maintained between the user's body and the handset, including the antenna. This carry-on belt, holster, and similar accessories used by this device shall not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and shall be avoided. Use only the suggested or approved antenna.
